Max. Working Pressure	1.0 MPa	
Working Temperature Range	NBR : -10 to 80°C EPDM : -20 to 120°C (on request)	

Standard Materials

Body	Ductile iron, JIS FCD450	Cast iron, JIS FC 250
Disc	316 stainless steel, JIS SCS14	304 stainless steel, JIS SCS13
	PPS (40 to 200 mm)	
	Ductile iron, JIS FCD 450 (80 to 300 mm)	Ductile iron, JIS FCD 450 (with hard chrome plating)
Stem	SUS420J2	
Seat Ring	NBR, EPDM	

Actuators

Lock Lever	40 to 200mm	-
Worm Gear	40 to 300mm	350 to 600mm
Center Handle	40 to 300mm	-
Pneumatic Cylinder	40 to 300mm	350 to 600mm
Motorized	40 to 300mm	350 to 600mm

Remark: *Never use an EPDM rubber seat ring if the valve being used for oil or for a fluid containing even a slight amount of oil.
The 316 stainless steel (JIS SCS14) rib disc comes standard from 50 mm to 300 mm.

1. Lock Lever Actuator

Generally used in small diameters. Opening and closing operations can be done with a light one-touch device, by turning the lever to only 90 degrees. Moreover, flow regulation is available with a ten-step locking device. Opening degrees are indicated by the tip of the lever.

2. Worm Gear Actuator

Gear reduction is available by the worm and worm wheels incorporated, opening the disc very lightly, leading to non-step adjustment of flow.

In addition, a stopper bolt is fitted to the fully closed and fully opened positions, hence accurate positions can be taken. Furthermore, the opening angle of the disc can be read by the indicator at the upper part of the gear box. "Close" is effected by revolving clockwise, and "Open" by revolving anticlockwise, with the manual handle.

700G-2R (350 mm - 600 mm)

Besides the above types of actuator, the following types are also available on request:

1. Pneumatic Cylinder
2. Motorized

Double Flanged Large Diameter Butterfly Valves

Model 700E

For various applications in water treatment, shipbuilding, air conditioning, petrochemical, power generation and other industries.

Standard Specifications	
Valve Nominal Size	650 to 1,350mm
Applicable Flange Standard	JIS 5K/10K
Face to face Dimensions	Manufactured standard
Max. Working Pressure	1.0 MPa
Working Temperature Range	NBR: -10 to 80 deg. C EPDM: -20 to 120 deg. C (on request)
Standard Materials	
Body	FC 250
Disc	FCD 450 (hard chrome plating), SCS13
Stem	SUS403
Seat Ring	EPDM* / NBR

Remark: *Never use an EPDM rubber seat ring if the valve being used for oil or for a fluid containing even a slight amount of oil.

2. Three phase motor actuator type

Guide of how to order

When ordering, please specify the following points:

How to order: 75 - 22 - 26

Butterfly valve, with the following information:

1. Type of pipe connection ..... Water Type, or Double Flanged Type
2. Flange standard ..... JIS (kgf/cm2), ANSI (lbs), BS, DIN, etc.
3. Nominal diameter ..... mm
4. Name of fluid .....
5. Pressure and temperature of fluid.....
6. Flow ..... m³/min.
7. Material of body, disk, seat....
8. Type of actuator.....
9. Operating power source.....
10. Classification society if required .....

Butterfly Valves

Double Flanged with Gear Box
Nodular Cast Iron, Undrilled
Model: KL700

A nodular cast iron double flanged butterfly valve with gear box. Flanges are undrilled.

Suitable for JIS 5K, 10K, PN10 & PN16.

Disc: Stainless steel, Seat: NBR

Unit Per Pc.

Diaphragm Valves

Diaphragm Valves

The basic construction of the diaphragm valve is quite simple. It is composed of three principal units called body, bonnet and diaphragm. It is particularly suitable for service lines handling corrosive, abrasive, viscous or fibrous fluids with the following advantages:

1. The most economical corrosion/abrasion resisting valve available today – versatile body and diaphragm materials.
2. Permanent bubble tightness against slurry, fiber and gases – resilient closure.
3. No contamination. The most suitable for the nuclear and food service – no gland packing.
4. Simple in-line maintenance – easy to disassemble and reassemble. Can be made without removing the body from the pipeline.

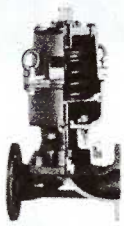
2. Weir Type Piston Operated Reverse Acting Valves

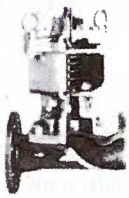
(Air-to-Open, Spring-to-Close)



When it is desirable to close the valve in case of a failure in the supply of operating pressure, this type of valve is recommended. Actuators are supplied in 2 kgf/cm² and 4 kgf/cm² operating pressure.

3. Weir Type Piston Operated Direct Acting Valves

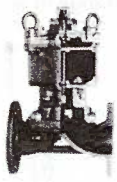
(Spring-to-Open, Air-to-Close)



When it is desirable to open the valve in case of a failure in the supply of operating pressure, this type of valve is recommended.

4. Weir Type Piston Operated Double Acting Valves

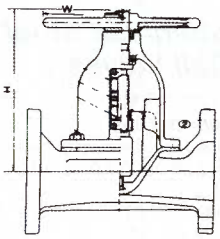
(Air-to-Open, Air-to-Close)



Being a springless type valve, the double acting valve is much more compact than the reverse acting valve and the direct acting valve. This type of valve may serve as either a normal open type or a normal closed type valve depending on the control scheme.

5. Straight Way Type Handwheel Operated Valves

The hand wheel operated valve has the usual features of the weir type diaphragm valve plus the features of the sluice valves. When fully opened, it forms a straight-transfer passage as in a pipeline.



Guide of how to order

When ordering, please specify the following points,

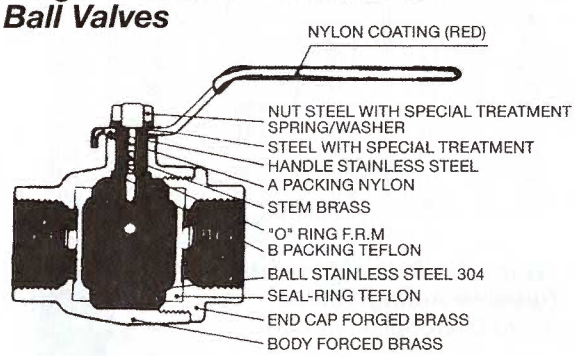
How to order: 75 - 23 - 01

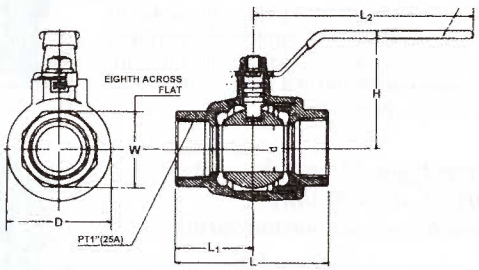
Diaphragm valve, with the following information:

1. Name of fluid to be used ...
2. Type of flow ..... Weir type, or straight way type
3. Size ..... Nominal size
4. End connection..... Screwed or flanged
5. Body material..... Cast iron, ductile iron, etc.
6. Diaphragm material ... Neoprene, natural rubber, etc.
7. Operation ..... Handwheel operated or pneumatically operated

Ball Valves

Forged Brass Screwed End Ball Valves





Service Fluid	Water, oil, gas, air, etc
Max. working pressure	1.96 MPa [20 kgf/cm²]

Mud Boxes

Cast Iron Mud Boxes(DIN)

Basket Type

Flat Flanged according to DIN PN 10

Mud boxes are installed in suction pipes aboard vessels to protect pumps against large solids. The standard perforation size of the strainer basket is 8 mm square; the cover is mounted with brass bow nuts. The cover is provided with a blind boss, suitable for mounting an air vent. These mud boxes are also used for application on shore, for example in swimming pool installations.

Material Specificatiom

Steam Traps

Steam Traps

These steam traps automatically adjust themselves to operate at varying steam pressures, and feature a large condensate discharge capacity for such a compact design.

The small size of the traps means less heat and therefore energy is wasted by radiation. For protection against dirt and scale and to prolong trap service life, pipe strainers should be fitted on the inlet side of the trap. Among the wide variety of these traps in types and sizes, the most common types are described along with their specifications.

Flow Indicators

Flapper Type Sight Flow Indicators

Cast iron flow indicator used for the visual inspection of the level of liquid flow through pipes and valves. The indicator is comprised of a gravity loaded swing flap which is lifted when fluid flows through the line. Used in pipes where there is no back flow. Stainless steel indicators are also available upon request.

Oil Flowmeters

These oil flowmeters are positive displacement type flow meters which are used in a wide variety of applications including measuring of boiler fuel oil and diesel oil, as well as for transactions of kerosene, light oil and heavy oil.

Gear Type

Roots Type

Gear Type

This flowmeter employs a gear-type rotor for small-volume flow of low-viscosity oil in heat control applications, etc. It can be used without modification to measure kerosene, light oil, or heavy oil. Measuring accuracy is ±0.5 %.

Roots Type

This flowmeter is widely used for transaction and in other applications. The roots rotor rotates without physical contact, resulting in extremely low pressure loss. In addition, its accuracy remains virtually unchanged over a long period of time.

Standard Specifications

Accuracy	±0.5%
Max working pressure	10 kgf/cm^2
Hydraulic test pressure	20 kgf/cm^2
Max working temperature	50°C for kerosene and light oil, 100°C for heavy oil

Flange rating		JIS 10 kgf/cm^2 FF
Material	Body	Cast Iron
	Rotor	Gear type : Bronze or phenol resin
		Roots type : Aluminium alloy casting
Counter unit		Integrating pointer and integrating counter (a reset counter is also available.)

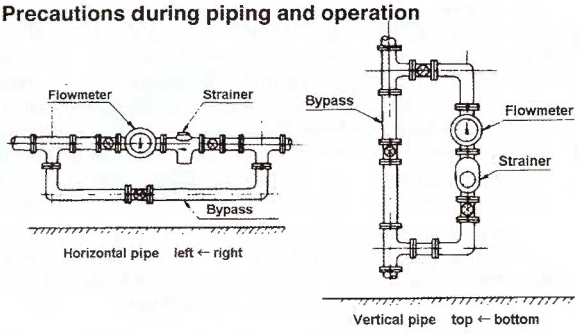
Precautions during piping and operation



Guide of how to order

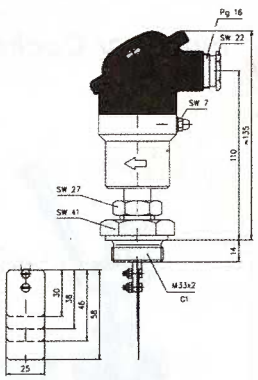
When ordering, please specify the following points,

How to order: 75 - 25 - 31

Flowmeter with the following information :

1. Type (Gear type or Roots type)
2. Fluid Name
3. Transmission Unit (In case of a flowmeter with transmitter)
4. Specify the following only when they deviate from the standard specifications.
   a. Flow direction
   b. Paint colour
   c. Power supply
   d. Cable connect standards
   e. Attachment for fitting counter unit by 45°

Paddle Type Liquid Flow Switches



For detecting the incoming flow or movement of the existing water or oil in the pipe, by utilizing the force of liquid flow to propel its paddle. Insert installation into pipe or T-pieces DN 25 to DN 50 or larger. Four paddles in different sizes included to be selected in accordance to the pipe size. Robust construction and vibration proof to 4g. Wide set point ranges and universally insertable. Setpoint adjustment by paddle size selection and by adjustment screw. Micro switch with high contact rating. Approved by German Lloyd, certificate no. 89 824-94 HH.

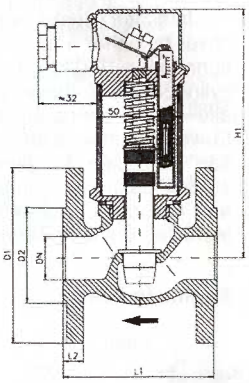
Name of Mfr. : SIKA

Piston Type Flow Switches



The piston type flow switch is installed on a standard valve body with internal thread connection. It is self-supporting and thus suitable for installation dimensions. Inline installation and end fittings are DN 15 ... DN 20 female thread, DN 25 ... DN 80 flange. The preferred installation position is vertically upright in horizontal pipelines. There is a flow direction arrow on the valve housing, which must always points in the flow direction. Approved by German Lloyd, Certificate No. 54 627 – 71 HH.

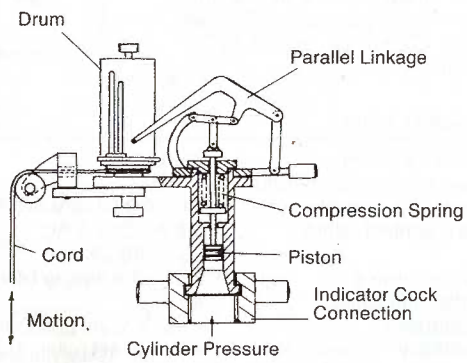
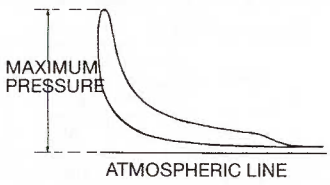
Indicator Cocks

Indicator Cocks

Indicator cocks are mounted directly on a cylinder cover by either a flanged connection (Sulzer) or a screwed connection (B+W). They are used to control the flow of cylinder gas to the engine indicator (2-way) and may also allow atmospheric pressure to act on the engine indicator (3-way) when measuring an engine cycle. Various readings can be taken to allow the engine operator to obtain engine balance, cylinder MIP (Mean Indicated Pressure) and cylinder power or to detect operating faults such as inefficiencies in fuel combustion.

Engine Indicator





Engine indicators display the change in cylinder gas pressure during each cycle of the diesel engine. This is achieved by connecting a piston/ cylinder assembly to the indicator cock and allowing the cylinder gas pressure to act on the piston. Movement of the piston by as pressure is opposed by a spring. The piston movement is magnified by the linkage to which a pen is attached. The pen will mark out a trace of the gas pressure variation on a card mounted on an oscillating drum driven from the camshaft.

The trace of gas pressure is recorded on pressure/ volume axes. The trace produced is an indication of work done per cycle. This can be converted into cylinder MIP and then into cylinder power. Distortion of the power card may indicate advanced/retarded injection timing and excessive after burning. A compression diagram is taken with fuel shut off from the cylinder shows maximum compression pressure and will detect low pressure caused by a worn cylinder liner, faulty piston rings, insufficient scavenge air, or a leaky exhaust valve, anything that would cause poor combustion.

Replacing standard "heavy" spring by a "light" spring allows the gas pressure variation during the scavenging process to be analysed. This allows early detection of fouled scavenge parts and a fouled exhaust system.

- early ignition
- late ignition
- after burning
- a leaking fuel injector
- a partly choked fuel valve
- an exhaust valve opening
- a choked exhaust
- worn cylinder liner
- faulty piston rings

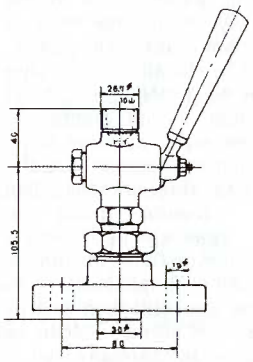
Sleeve Packed Indicator Cocks for Diesel Engines

Forged Steel

Designed to withstand high pressure gases. When ordering, please specify the following:

1. The type of diesel engine
2. Manufacturer
3. Threaded or flange size on the engine cylinder

Indicator Cocks for Sulzer Type



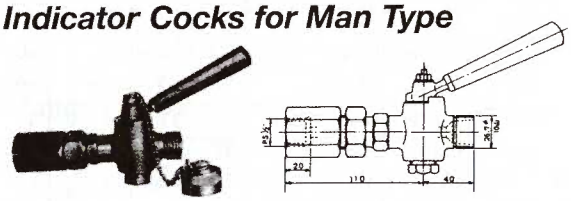
For URAGA Sulzer For MHI Sulzer For IHI Sulzer

The engine types of different manufacturers require different types of joints for the indicator cocks. Specify DIESEL ENGINE MAKER – TYPE OF ENGINE out of specified joints as shown.

How to order: 75 - 26 - 01

Indicator cock for Sulzer type, MANUFACTURER'S NAME and TYPE of ENGINE

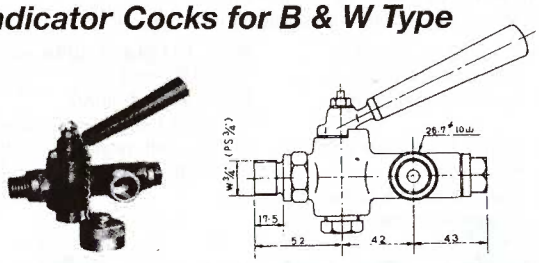
Indicator Cocks for Man Type



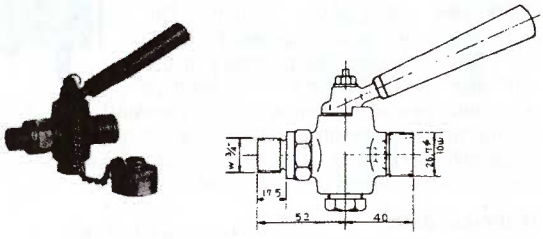
How to order: 75 - 26 - 06

Indicator cock for Man type, MANUFACTURER'S NAME and TYPE of ENGINE

Indicator Cocks for B & W Type



For Main Engine



For Auxiliary Engine

How to order: 75 - 26 - 11

Indicator cock for B & W type, MANUFACTURER'S NAME and TYPE of ENGINE

Spare Parts for Indicator Cocks

When ordering, specify diesel engine maker, type of engine, and cylinder bore.

Pressure Controls

A pressure control contains a single-pole changeover switch. The position of the contacts depends on the set scale value and the pressure in the inlet connection. This control is used as protection against too low a suction pressure or too high a discharge pressure on compressors for refrigeration and air conditioning plants. Also used for starting and stopping refrigeration compressors and condenser fans.

Technical data

Permissible ambient temperature
–40 to +65°C (+80°C for max. 2 hours).

DIN-approved units :
–25 to +65°C (+80°C for max. 2 hours).

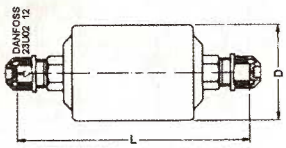
Filter Driers with Solid Core



Filter driers with a solid core are for use in liquid lines in refrigeration and air conditioning plants for fluorinated refrigerants.

An effective protection against moisture and acid in the refrigeration plant. Filter driers contain an optimum mixture of silicagel, Molecular Sieves and activated aluminium.

Filter driers ensure the greatest possible retention of impurities from the refrigeration plant, and are fitted with a new type of solid core composed of grains of uniform and optimum size.

Designed and dimensioned so that they produce only a slight pressure drop, and prevent capacity reduction because of flash-gas in the liquid line.

Max working pressure PB/M WP	Liquid capacity in kW. on pressure drop Δp = 0.7 bar			Drying capacity in gH_2O at 24°C			Connection in.	Dimensions mm		Weight kgs

Guide of How to Order

How to order : 75 - 31 - 01

Filter drier with solid core, with the following information:

1. Kind of refrigerant..... R-22, R-134a, or R-404A
2. Maximum working pressure..... bar (MPa)
3. Drying capacity ..... grm
4. Size of connection ..... 1/4", 3/8", 1/2" or 5/8"
5. Manufacturer's name.....
6. Type and model name .....

Pressure Regulators

Condensing pressure regulator :

Used to maintain a constant and sufficiently high condenser – and receiver pressure in refrigeration and air conditioning plants with air-cooled condensers.

Evaporating pressure regulator :

To be mounted in the suction line after the evaporator. Used to maintain a constant evaporating pressure and thereby a constant surface temperature on the evaporator. Also, regulators protect against too low an evaporating pressure. The regulator closes when the pressure in the evaporator falls below the set value.

Crankshaft pressure regulator :

To be fitted in the suction line ahead of the compressor. Protects the compressor motor against overload during start-up after long standstill periods or after defrost periods.

Condensing Pressure Regulator

Evaporating Pressure Regulator

Crankcase Pressure Regulator

Storm Valves (DIN)
Ductile Cast Iron
According to DIN-HNA Type
Flat Faced Flanged Ends to DIN PN 10

Storm valves are mainly installed in sanitary piping systems which have a ship's side exit. They will prevent sea

water entering this system during heavy sea. Model 1205 and 1208 can be equipped with a locking device in order to obtain model 1207 and 1209.

Maximum Operating Pressure
Strength tested at pressure 10 bar.

Material Specificatiom

Component	Material	EN and/or (DIN)
Disc Sealing Ring (Seawater resistant)	Rubber

DIN Standard Valves

The following table are a cross comparison from JIS(Japan Industrial Standard) to DIN(Deutsche Industrie-Norm),and from DIN to JIS for your reference purpose.The tables are classified according to similar material,working pressure and general design.However as you understand,the basic specification of material, dimensions and flanges are essentially defferent between JIS standard and DIN standard. We are not held responsible for any possible accident or damage caused by using these tables.

Comparison List

Globe Valves (DIN)
Bronze, DIN Flanges
Secured Bonnet, Metal Seated
Fixed Disc, Pressure Rating PN 16
Straight and Angle

Bronze globe valves with bronze disc and seat, pressure rating PN16, straight and angle pattern, flat faced flanges acc. to DIN PN 16, threaded and secured bonnet, inside screwed stem and rising handwheel.

Primary application area is aboard ships where a light bronze construction is desirable, but it also complies with all requirements related to maritime inspection and classification societies, which in certain instances specify a dependable securing of threaded bonnets.

Globe Valves (DIN)
Bronze, DIN Flanges
Bolted Bonnet, Outside Screw and Yoke
Metal Seated, Fixed Disc
Pressure Rating PN 6-10-16
Straight and Angle

Bronze globe valves with bronze disc and seat, pressure rating PN 6/10/16, straight and angle pattern, flat faced flanges according to DIN PN 10/16, bolted bonnet, outside screw & yoke. Heavy pattern for ship building industry.

Application: the valves offer good resistance to corrosive action of seawater, fresh water and waste water.

Application area: aboard ships, etc. but also in installations where internal or external corrosion is undesirable.

Globe Valves (DIN)

Cast Steel, DIN Flanges
Pressure Rating PN 25 - 40
Stainless Steel Trim
Fixed Disc, Straight and Angle

Cast Steel globe valves with stainless steel trim, pressure rating PN 25 – 40, straight and angle pattern, flanged ends acc. to DIN PN 25 / 40, outside screw & yoke and rising handwheel.

Application : steam, hot/cold water, oil, etc. For thermal oil, the use of bellow sealed globe valve is preferred.

Globe Valves (DIN)
Ductile Cast Iron
DIN Flanges, Pressure Rating PN 16
Bronze Trim, Fixed Disc, Straight and Angle

Ductile cast iron globe valve with bronze trim, pressure rating PN 16, straight and angle pattern, flanged ends acc. to DIN PN 10/16, outside screw & yoke and rising handwheel.

Application: ductile cast iron valves are frequently used aboard ships, especially in places where safety considerations prohibit the use of ordinary cast iron.

Gate Valves (DIN)

Cast Iron, DIN Flanged Ends
Inside Screwed Stem
Short Face to Face, Bronze Seat

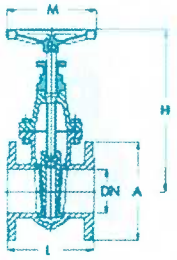
Cast iron gate valve with bronze seat, pressure rating PN 2.5/6/10, flanged ends acc. to DIN PN 10, bolted bonnet, inside screwed stem, non-rising handwheel, solid wedge, short Face To Face acc. to EN 558-1, 14 (DIN 3202-F4). Application: cold and hot fresh water, seawater, lubricating oil steam etc.

*Drain Plug is available in option.



Pressure and Temperature Range

Bore	Stem and Hot Water	Other Media
DN 40 thru DN 300	8 bar - 150°C	10 bar - 120°C
DN 350 thru DN500	2 bar - 150°C	6 bar - 120°C
DN 600	-	2.5 bar - 120°C

Gate Valves (DIN)

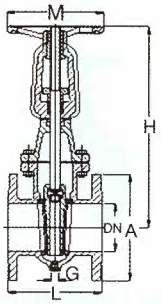
Cast Iron, DIN Flanged ends
Outside Screw & Yoke
Short Face to Face
Stainless Steel Seat
Pressure Rating PN 10

Cast iron gate valves with stainless steel seat, pressure rating PN 10, flanged ends acc. to DIN PN 10, bolted bonnet, outside screwed stem and yoke, rising stem, non-rising handwheel, solid wedge, drain plug, grease nipple, short face to face acc. to EN 558-1, 14 (DIN 3202-F4).

Application : cold and hot fresh water, lubricating oil, steam etc. Application due to the absence of cupriferous parts, these valves are especially suitable for aggressive media.



Pressure and Temperature Range

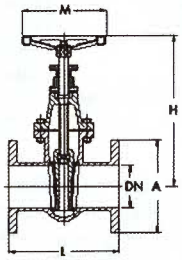
Gate Valves (DIN)

Cast Iron, DIN Flanged Ends
Inside Screwed Stem
Long Face to Face
Bronze Seat

Cast iron gate valve with brass seat, pressure rating PN 16, flanged ends acc. to DIN PN 10/16, bolted bonnet, inside screwed stem, non-rising stem, non-rising handwheel, solid wedge, long face to face acc. to EN 558-1, 15 (DIN 3202-F5).

Application: as standard, these valves can be used for cold and warm water.



Pressure and Temperature Range

Bore	Pressure and Temperature Range	Max. Temperature
DN 40 thru DN 300	16 bar - 80°C	80°C (due to NBR bonnnet gasket)
For higher temperatures, use a different bonnet gasket

Gate Valves (DIN)

Cast Iron, DIN Flanged Ends
Inside Screwed Stem
Short Face to Face
Pressure Rating PN16

Cast steel gate valve with stainless steel seat, pressure rating PN 16, flanged ends acc. to DIN PN 16, bolted bonnet, inside screwed stem, non-rising stem, non-rising handwheel, flexible wedge, position indicator, short face to face acc. to EN 558-1, 14 (DIN 3202-F4).

Application suitable for general applications; due to the special trim, these valves are especially suitable for seawater, and they are used aboard ships as ship-side valve and in cooling water systems.

Check Valves (DIN)
Bronze, DIN Flanges
Lift Type
Straight and Angle

Bronze lift type check valves with bronze disc and seat, pressure rating PN 16, straight and angle pattern, flat faced flanges as per DIN PN 16 and bolted bonnet. Only suitable for installation in horizontal pipelines. These check valves offer very good resistance to the corrosive action of seawater, fresh water and waste water.

Application area : aboard ships but also in installations where corrosion (in- or external) is undesirable.

Check Valves (DIN)

Cast Iron, DIN Flanges
Lift Type with Spring
Bronze Seat
Straight and Angle

Cast iron life type check valves with zinc-free bronze disc and seat, spring loaded disc, pressure rating PN 16,

straight and angle pattern with bolted bonnet, flanges acc. to DIN PN 16.

Suitable for horizontal and vertical (upward flow) installation.

Application area : maritime use in particular, due to the zinc free bronze trim.

Application : in particular for cold and warm (sea) water, air, gases, other neutral media.

Check Valves (DIN)

Cast Steel, DIN Flanges

Swing Type

Pressure Rating PN 16

Cast steel swing type check valves, stainless steel disc and seat, pressure rating DIN PN 16, straight pattern with bolted bonnet, full bore, flanged acc. to DIN PN 16. Suitable for horizontal and vertical (upward flow) installation.

Application : general industrial use, such as hot water installations, aboard ships for ships side, etc.

Plug Valves (DIN)
Bronze, DIN Flanges 2-way and 3-way

Flanged plug valves are available in a 2 and 3 way patterns. The 3-way pattern is available with L or T-plug. All versions are executed with gland packing. With model 15L and 15T, as required by the Dutch shipping inspectorate, the dimensions of plug and valve body have been selected such that none of the ports can be undesirably interconnected with the plug in any intermediate position. Cock wrench is available in separated order.

Needle Valves (DIN)
Stainless Steel,
Straight and Angle Pattern
BSP Female Threaded Ends

Needle valve, especially suitable for accurate regulation of gases and liquids.

Features
- Fitted with external screwed stem, making it suitable for high temperatures.
- Secured bonnet.
- "Backseat" construction ; In fully open position, the gland packing is relieved.
- One-piece PTFE gland packing, adjustable by means of secureable gland.
- Stem with non-rotating needle tip ensures 100% sealing.
- Plastic dust cap protects threaded stem.

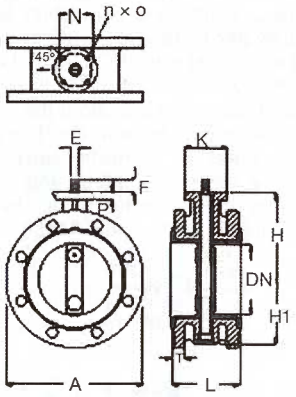
DIN Butterfly Valves

Butterfly Valves (DIN)
Ductile Cast Iron, Rubber Lined Flange Type Series 46 Bonded Liner

Ductile cast iron butterfly valve, double-flanged type with centric disc, one piece shaft supported by bronze radial bearings, rubber lined body. The rubber liner is vulcanized integrally to body and bearings ensuring reduced torque and a long lifetime. This liner extends along the valve faces, eliminating the use of gaskets. The double flanged body is suitable for mounting between flanges acc. to DIN PN10 or PN16. Face to face dimensions are acc. to ISO5752 /EN558 basic series 13, DIN3202 F16 and BS5155. Valve is also suitable for end of line applications. For easy mounting of both manual and automatic actuators the valve is executed with a topflange according to the ISO5211 standard. Further applications of series 46 butterfly valves can be found amongst others in general industrial and maritime systems for media such as (ballast) water, gases, hydrocarbons and light corrosive media up to a maximum of 16 bar.



Features
- Connections: Flange
- Body material: Cast iron, nodular
- Valve butterfly material: Bronze
- Operation: None

Pressure and Temperature Range

Size	Liner	Pressure Raiting	Temperature Range	Max. Operating Pressure

Butterfly Valves (DIN)

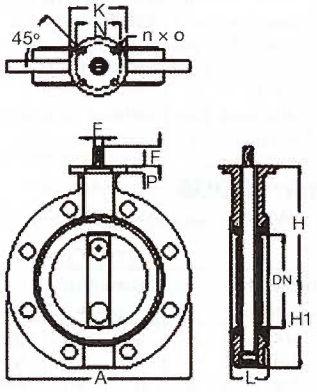
Ductile Cast iron, Rubber Lined Mono-flange Type, Bonded Liner

Ductile iron butterfly valve, monoflange type with centric disc, one piece shaft supported by bronze radial bearings for smooth operation, rubber lined body. The rubber liner is vulcanized integrally to body and bearings ensuring reduced torque and a long lifetime. This liner extends along the valve faces, eliminating the use of gaskets. The body with monoflange is suitable for mounting between flanges according to DIN PN10 or PN16. Due to the monoflange design this valve can be used as end of line valve. Face to face dimensions are according to ISO5752/EN558 basic series 20, API609, DIN3202 K1 and BS5155. For easy mounting of both manual and automatic actuators the valve is executed with a topflange according to the ISO5211 standard. Further applications of series 60 butterfly valves can be found amongst others in general industrial and maritime systems for media such as (ballast) water, gases, hydrocarbons and light corrosive media up to a maximum of 16 bar (PN16 execution).



Features
- Connections: Monoflange
- Valve butterfly material: Bronze
- Operation: None

Butterfly Valves (DIN)
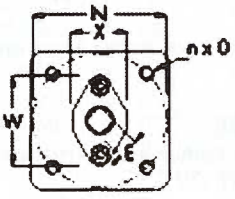
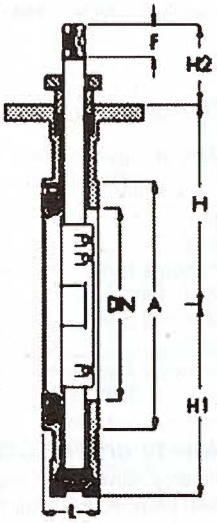
Stainless Steel and Cast Steel
High Performance Type
Ring Type

High-Performance butterfly valve, ring type with streamlined double eccentric disc and one-piece anti-blow out shaft, bi- directional sealing, anti-static design. Available in stainless steel and cast steel. Executed with replaceable seat in PTFE, Fire-safe, metal or double-seat version, for in-line sealing. For sealing to the atmosphere the valve is provided with a self-centering and re-adjustable gland packing of PTFE or graphite material. The body with centering holes for easy pipe alignment is suitable for mounting between flanges according to DIN PN 10/16 and ASME 150#. Face to Face dimensions are according to ISO 5752/EN558 basic series 20(DN 350, basic series 25). For easy adaption of both manual and automatic actuators the valve is executed with a topflange according to the ISO 5211 standard. Applications of series 96 butterfly valves can be found amongst others in general industrial and maritime systems for example in corrosive media, gases, steam and hot water up to a maximum of 20 bar (ASME class 150 execution). For application in cargo lines on chemical and liquefied gas tankers this valve has a BV type approval.





Pressure and Temperature Range

20 bar, -45°C to +260°C, depending on choice of material.

See pressure/temperature diagrams for precise specifications.

(to be continued)

When ordering butterfly valves, please specify the following information :

1) Type of Butterfly : Wafer, Lug, Mono, Double Flanged, or High Performance.
2) Nominal Size : Millimeters or Inches.
3) Face to Face : Reference the charts above.
4) Flange Drilling : Reference the chart above.
5) Actuation: Manual lock lever and manual worm gear. For pneumatic, electric and hydraulic actuators, include specifications.
6) Manufacturer: Manufacturer and model number is helpful in cases where dimensions are not provided, and essential when ordering replacement parts (seat rings, discs, etc...).
7) Material: Specify the required materials for the body, disc, and Seat.
   - Body : Cast Iron, Ductile Iron, Cast Steel, Stainless, Steel, or Bronze.
   - Disc : Ductile Iron, Stainless Steel, Aluminium/Bronze, or Coated.
   - Seat : EPDM, NBR, Viton, Neoprene, or Teflon (PTFE).
8) Medium : Oil, Gas, Water, etc...
9) Working Temperature : Degrees Celsius or Fahrenheit.

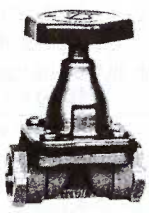
DIN Diaphragm Valves

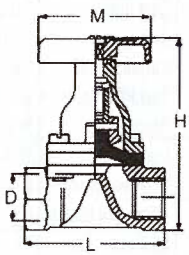
Diaphragm Valves (DIN)
Bronze, BSP Female Threaded
Weir Type

Weir type bronze diaphragm valve, BSP female threaded ends acc. to DIN 259, rising stem and handwheel.

Application :
In cold and warm water circuits for both tap water and central heating systems. As main valve in water and gas pipelines and in various industrial applications. The valve is KIWA type approved.

Remark: Model 5603 with EPDM diaphragm may not be used for hot tap water in combination with copper piping. EPDM diaphragm will be supplied if not specified especially.





Pressure and Temperature Range

Diaphragm	EPDM	Neoprene (CR)
Max. Operating Pressure	10 bar	10 bar
Max. Temperature	120°C	60°C

Material Specification

Component	Material	EN and/or (DIN)
Body	Bronze	CuSn5Zn5Pb5-C (G CuSn5ZnPb (Rg 5))
Bonnet	Brass	CuZn40Pb2
Stem	Brass	CuZn40Pb2
Handwheel	Steel

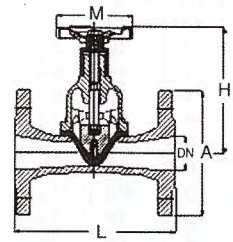
Econosto Model No. 5603

Diaphragm Valves (DIN)
Cast iron, Flanged Ends
Full Bore, Pressure Rating PN 10

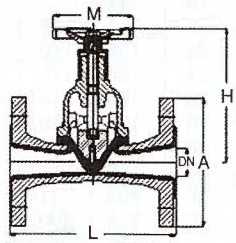
Full bore cast iron diaphragm valve, lined and unlined body. Flanged ends DIN PN 16. Position indicator with integrated stem protector and rising handwheel.

Application: Cold and hot water, portable water, air, oil, abrasive and aggressive media.

Suitability for application is partly depending on selected diaphragm and/or lining material.



No Lining



Hard Rubber Lining

DIN Pressure Reducing Valves

Pressure Reducing Valves

Gunmetal & Stainless Steel with Flange Connection

Marine Type Approvals held for these valves:

- American Bureau of Shipping,
- Bureau Veritas,
- Germanischer Lloyd,
- Lloyds Register

Pressure reducer with flange connection made of gunmetal with pressure-relieved single seal valve and built-in dirt trap.

The pressure can be adjusted via a non-rising valve stem. Flange connection according to DIN EN 1092-3. Pressure reducer equipped with pressure gauge ports; gauge connection G 1/4".

Available three models with

- EPDM (ethylene propylene diene monomer rubber) seal suitable for water, neutral and non-sticking liquids, compressed air and neutral gases.
- FKM (Fluoroelastomer) seal suitable for non-neutral media i.e. oils, fuels, oil-laden compressed air, etc..

- **Low pressure: 682/482mGFO-LP EPDM and FKM**
- **Standard pressure: 682/482mGFO-SP EPDM and FKM**
- **High pressure: 682/482mGFO-HP EPDM and FKM**

Mesh sizes: DN15 to DN32 = 0.6 mm
DN40 and DN100 = 0.75 mm

Seats for 682:
DN15 to DN50 made of gunmetal
DN65 to DN100 made of gunmetal/stainless steel

Primary pressure: up to 40 bar
Secondary pressure: 0.5 - 15 bar

All models also available in **Stainless Steel**: series **482**.

How to order: CODE

Pressure Reducing Valve (DIN), Gunmetal or Stainless Steel, with Flange Connection, SIZE DIN, Type of Pressure Rating (LOW, STANDARD, or HIGH), SPECIFY THE SEALS FROM "EPDM" or "FKM"

Pressure Reducing Valves
Gunmetal & Stainless Steel
with Threaded Connection

Marine Type Approvals held for these valves:
- American Bureau of Shipping,
- Bureau Veritas,
- Germanischer Lloyd,
- Lloyds Register

Pressure reducer with threaded connections made of gunmetal with pressure-relieved single seat valve and built-in dirt trap. Spring made of rust resistant, and strainers made of stainless steel. Diaphragm made of high-quality plastic with insert of fabric, and gasket made of heat resistant-plastic. Body with G 1/4" connection for pressure gauge on both sides.

Standard thread: BSPTm also available in female BSP-P for sizes up to 1"(PLEASE CLEARLY INDICATE IN THE ORDER."f f" or "BSPTm/BSPTm")

Available three models with
- EPDM (ethylene propylene diene monomer rubber) seal suitable for water, neutral and non-sticking liquids, compressed air and neutral gases.
- FKM (Fluoroelastomer) seal suitable for non-neutral media i.e. oils, fuels, oil-laden compressed air, etc..

- **Low Pressure: 681/481mGFO-LP EPDM and FKM**
- **Standard Pressure: 681/481mGFO-SP EPDM and FKM**
- **High Pressure: 681/481mGFO-HP EPDM and FKM**

Mesh sizes: G 1/2" to G 1-1/4" = 0.6 mm
DN40 and DN50 = 0.75 mm

Seats for version 681:
DN15 to DN20 made of stainless steel
DN32 to DN50 made of gunmetal

Primary pressure: up to 40 bar
Secondary pressure: 0.5 - 15 bar

All models also available in **Stainless Steel**: series **481**.

Pressure Reducing Valves
Gunmetal with Threaded Connection

Marine Type Approvals held for these valves:

- Germanischer Lloyd,
- Lloyds Register

Pressure reducer with threaded connections made of gunmetal. Either with elastomere moulded diaphragm made of FKM or with piston. Body with G 1/4" connection for pressure gauge on both sides of outlet.

Available in various versions:

- Version code: **mXXXSM**:
  with elastomere moulded diaphragm and seals made of FKM suitable for e.g. oils, fuels, oil-laden compressed air, etc..
  max. inlet pressure: 60 bar, outlet pressure: 0.5 to 15 bar.
- Version code: **kXXXSK / kXXXHK**:
  with piston made of brass and seals made of FKM suitable for e.g. oils, fuels, oil-laden compressed air, etc..
  kXXXSK: max. inlet pressure: 60 bar, outlet pressure: 5 to 30 bar
  kXXXHK: max. inlet pressure: 60 bar, outlet pressure:10 to 50 bar
- Version code: **xGSXX**:
  for neutral gases (compressed air) with secondary venting
- Version code: **xGFOXX**:
  for liquids & non-neutral gases without secondary venting

How to order: CODE Pressure Reducing Valve (DIN), with threaded connection, Gunmetal, Version with diaphragm or piston – depending on pressure rating (mXXXSM, kXXXSK or kXXXHK), Version for which kind of medium (xGSXX or xGFOXX), SIZE DIN

Example code:
684mGSSM-20-f/f-20/20 FKM
series 684 **mXXXSM**: **diaphragm**
xGSXX: **with secondary venting**
20-f/f-20/20: size DN**20** with female BSP-P threads

Series 684:

Pressure Reducing Valves

Gunmetal with Socket Joint

Marine Type Approvals held for these valves:

- American Bureau of Shipping,
- Bureau Veritas,
- Germanischer Lloyd,
- Lloyds Register

Pressure reducer with socket joint made of gunmetal with pressure-relieved single seat valve. Suitable for compressed air and neutral gas, water, neutral and non-sticking liquids. Body with G 1/4" connection for pressure gauge on both sides.

Primary pressure : up to 50 bar (DN32 – 30 bar)
Secondary pressure : 1.5 to 10 bar
Biggest reduction relation 10 : 1

Component	Material	DIN EN	ASTM/AISI

Ball Valves (DIN)
Stainless Steel
Female Threaded Ends
Full Bore

Two-piece ball valve with full bore, floating ball, BSP or NPT female thread connection, pressure rating 1,000 PSI WOG fitted with blow-out proof stem. This ball valve is available in stainless steel 1.4408. Actuated by means of a lockable lever with PVC sleeve. This type of ball valve is generally applicable e.g. for compressed air, HVAC, fuel and corrosive systems up to maximum 68 bar.

Ball Valves (DIN)
Forged Steel
DIN Flanges, 2-way,
Full Bore
Pressure Rating PN 16 – PN 40

Two-piece ball valve with full bore, floating ball and flange connection to DIN PN 16 or PN 40. Actuated by means of a lever, T-bar or gearbox. Also available with a pneumatic or electric actuator. This type of ball valve is generally used in industrial systems such as steam, water, gases, and corrosive media, up to a maximum of 40 bar (PN 40 version). These ball valves are anti-static, fire-safe and fitted with a double gland packing and blow-out proof stem.

Ball Valves (DIN)

Stainless Steel
DIN Flanges, 2-way
Full Bore
Pressure Rating
PN 16 – PN 40

Two-piece ball valve with full bore, floating ball and flange connection rated DIN PN 16 or PN 40. Actuated by means of a lever, T-bar or gearbox. Also available with a pneumatic or electric actuator. This type of ball valve is generally used in industrial systems such as steam, water, gases, and corrosive media, up to a maximum of 40 bar (PN 40 version). These ball valves are anti-static, fire-safe and fitted with a double gland packing and blow-out proof stem.

DIN Overflow Valves

Pressure Relief Valves

Gunmetal

Marine Type Approvals held for these valves:

- American Bureau of Shipping,
- Bureau Veritas,
- DNV,
- Germanischer Lloyd,
- Lloyds Register

Overflow and control valves made of gunmetal with stainless steel spring. Suitable for liquids, steam and gaseous media.

Available models:

- **618 sGF0** Non-gastight version without lifting lever
- **618 tGF0** Gastight version
- **618 sGFL** Non-gastight version with lifting lever

Available seals:

- **NBR**
- **PTFE**

Ranges of adjustment: 0.2 – 0.8 bar
0.5 – 2.5 bar
2.0 – 12 bar
12 – 20 bar with PTFE seal

Valves can be delivered unset within a pressure range or set and sealed at the factory.

Overflow Valves

Gunmetal & Stainless Steel

Marine Type Approvals held for these valves:

- American Bureau of Shipping,
- Bureau Veritas,
- DNV,
- Germanischer Lloyd,
- Lloyds Register

Overflow and control valves made of gunmetal with stainless steel spring. Suitable for liquids, steam and gaseous media. Adjustable under operating conditions without medium escaping in the atmosphere. Gastight version of spring housing.

Available models:

- **617tGFO gastight version for gases and liquids - without lifting device**

Available seals :

- **NBR**
- **FKM**
- **PTFE**

Ranges of adjustment : 0.5 – 2.5 bar
2.0 – 8.0 bar
2.0 – 12 bar
12 – 20 bar (with PTFE seal)

Valves can be delivered unset within a pressure range or set and sealed at the factory.

All models are also available in **Stainless Steel** : series **417**.

Overflow Valves

Gunmetal & Stainless Steel with Stainless Steel Spring

Marine Type Approvals held for these valves:

- American Bureau of Shipping,
- Bureau Veritas,
- DNV,
- Germanischer Lloyd,
- Lloyds Register

Angular shaped spring loaded overflow valves made of gunmetal with stainless steel spring – externally adjustable. Suitable for the protection of pumps against overloading in closed circuits for neutral / non neutral, non-sticking liquids and for the control of systems under pressure for neutral / non-neutral gases and vapours and – depending on the sealing material – also for steam. with bellows without lifting device.

Available models:853 bGFO with bellows, for gases and liquids without lifting device

Available seals :

- **NBR**
- **EPDM**
- **FKM**
- **PTFE**
- **FFKM**

Valves can be delivered unset within a pressure range or set and sealed at the factory.

Series also available in **Stainless Steel**: Series **453**.

Series 853 (Gunmetal):

Component	Material	DIN EN	ASTM / AISI
Body	Gunmetal	CC499K	UNS C83600

Overflow Valves

Gunmetal & Stainless Steel

Marine Type Approvals held for these valves:

- American Bureau of Shipping,
- Bureau Veritas,
- DNV,
- Germanischer Lloyd,
- Lloyds Register

Overflow and control valves made of gunmetal with spring made of spring steel with anti-rust protection with threaded connections. With EPDM (ethylene propylene diene monomer rubber) seal suitable for water, neutral and non-sticking liquids, compressed air and neutral gases.

Standard thread: BSPTm also available in female BSP-P for sizes up to 1" (PLEASE CLEARLY INDICATE IN THE ORDER:"f/f" or "BSPTm/BSPTm").

Valves can be delivered unset within a pressure range or set and sealed at the factory (against surcharge).

Mesh sizes : G 1/2" to G 1-1/4" = 0.6 mm
DN40 and DN50 = 0.75 mm

Set pressure : 0.5 – 10 bar

Ranges of adjustment : 0.5 – 2 bar
1.5 – 6 bar
5.5 – 10 bar

Use : Suitable for water up to 95 deg. C

Available seals : EPDM, FKM

Also available in **Stainless Steel** : **series 430**.

DIN Safty Valves

Safety Relief Valves (DIN)

Brass, Spring-loaded

BSP Female Threaded Ends

Low Capacity Maximum 10 bar

Safety relief valves with threaded connection, can be used for many simple applications. Suitable for gases, vapours and liquids.

Specific features and applications:

Model 517/518 : Saturated steam and hot water, available including Stoomwezen/Lloyd's Register test certificate on request.

Model 527 : Including diaphragm, for water, air and other non-aggressive gases.

517

518

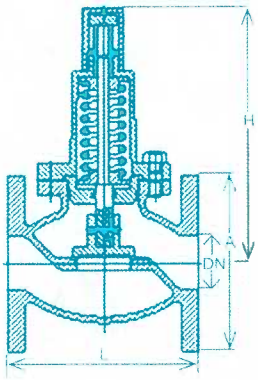
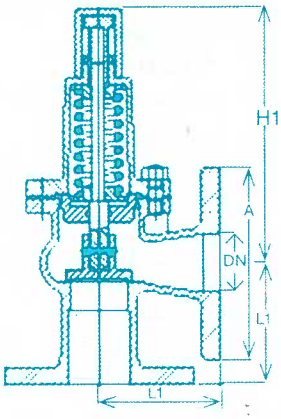
Overflow Valves (DIN)
Bronze, DIN Flanges
Globe Type
Straight and Angle Pattern

Bronze overflow valves are primarily applied in the maritime segment for pressure regulation in liquid systems. Suitable for salt and fresh water, oil, steam and air.

Remark: This valve may also be used as a safety valve aboard ships. In connection with the PED guidelines, this is not permitted for installations on land, if the set pressure is >0.5 bar.



Straight



Angle

Temperature Range: 120°C

Material Specification

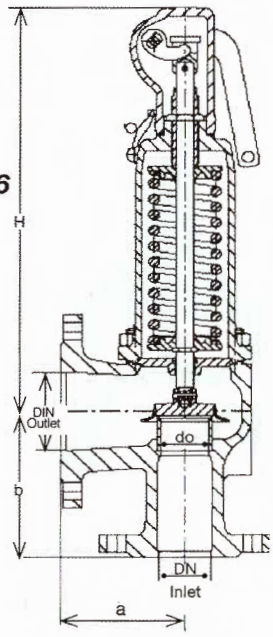
Safety Valves (DIN)
Cast Steel, Spring-Loaded DIN Flanges, High Capacity Pressure Rating PN 40/16



Full lift Safety Valves are mainly applied to vapours (including steam) and gases. Suitable for liquids in large volumes.

Type of Approval: TUV-SV,,, -576 D/G/F, PED, ASME NB, BV, DNV, GL, LROS and RINA.

Material Specification

Component	Material	EN and/or (DIN)
Body	Cast steel	GP240GH +N (GS-C25)
Seat	Stainless steel	X2CrNiMo17-12-2 (G-X2CrNiMo 18 10)
Disc	Stainless steel	X39CrMo17-1 (X35CrMo17)
Stem	Stainless steel	X20Cr13
Spring	Spring steel	
Bonnet	Ductile cast iron	GJS-400-15 (GGG-40)

Temperature Range (DIN EN)
-85/+450°C*

* Above 200°C, provided with heat-resistant spring and above 400°C also provided with SS bolts and nuts for the bonnet.

Flange: Inlet flange (on the bottom) – according to DIN PN40.

Outlet flange (on the side) – according to DIN PN16.

Safety Valves

Spheroidal Graphite Cast Iron with Stainless Steel Spring

Angular shaped spring loaded safety valves made of spheroidal graphite cast iron (GGG 40.3) with stainless steel spring. Set pressure is protected by seal. Internal parts made of stainless steel. Suitable for the protection of pressure tanks and systems for neutral, non-sticking liquids, provided boiling temperature is not reached under atmospheric pressure. Available two types; Model 352 F without lifting device, and Model 352 FL with lever for lifting.

Component	Material	DIN EN	ASTM /AISI
Body	GGG 40.3	0.7043	A536-87
Internal Parts	Stainless steel	1.4571	AISI 316Ti
Pressure Spring	Stainless steel	1.4310	AISI 301

Safety Valves
Red Brass
with Stainless Steel Spring

Angular shaped spring-loaded safety valves made of red brass with stainless steel spring. Set pressure is protected by seal cap. Valve cone can be lifted using lever. Suitable to protect thermostatically protected closed-circuit water heating systems with flow temperatures up to 120 deg. C. For all static heights or nominal powers of more than 350 kW as well as for protection of solar plants up to 120 deg. C, and also to protect indirectly heated heat generators in accordance with DIN 4751 part 2 the safety valves only have to be rated for the flow rate of the expansion water.

Safety Valves
Gunmetal with Stainless Steel Spring
Stainless Steel & Spheroidal Graphite Cast Iron

Marine Type Approvals held for these valves:
- American Bureau of Shipping,
- Bureau Veritas,
- DNV,
- Germanischer Lloyd
- Lloyds Register

Angular shaped spring-loaded safety valves made of gunmetal with stainless steel spring. Internal parts are made of gunmetal and sea-water resistant. Suitable for the protection of pressure tanks and systems for non-neutral and neutral gas, steam and liquids, and of steam boilers. Also suitable for combustible and toxic gas, steam and liquids

Available three models in:
Gunmetal with Stainless Steel Spring: 852
Stainless Steel: 452
Spheroidal Graphite Cast Iron: 352
- **Model 852/452/352 tGFO gastight without lifting device**
- **Model 852/452/352 tGFL gastight with lever for lifting**
- **Model 852/452/352 bGFO gastight with bellows without lifting device**
- **Model 852/452/352 bGFL gastight with bellows with lever for lifting.**

Available seals :
- **NBR**
- **EPDM**
- **FKM**
- **PTFE**
- **PTFE+carbon (standard from 25 bar)**
- **FFKM**
- **metal-to-metal sealing**

** Please Specify the Seal from "NBR", "FKM" or "PTFE" when ordering.

Safety Valves

Gunmetal & Stainless Steel with Stainless Steel Spring

Marine Type Approvals held for these valves:

- American Bureau of Shipping.
- Bureau Veritas,
- DNV.
- Germanischer Lloyd,
- Lloyds Register

Angular shaped spring loaded safety valves made of gunmetal with stainless steel spring and inlet body. Seal cap prevents unauthorized changing of set pressure. Suitable for the protection of pressure tanks and systems for neutral /non-neutral vapours, gases and liquids, steam boilers and steam plants.

Available models:

- **861sGK non-gastight version with twist-type lifting mechanism**
- **861sGL non-gastight version with lifting lever**
- **861tG0 gastight for gases without lifting device**
- **861tF0 gastight for liquids without lifting device**
- **861tGF0 gastight for gases and liquids without lifting device**

Available seals:

- PTFE up to 22 bar
- PTFE + carbon from 22.1 bar up to 50 bar

All models are also available in **Stainless Steel:** series **461.**

American National Standard Institute (ANSI) for Marine Services

The following tables are a cross comparison from JIS (Japan Industrial Standard) to ANSI (American National Standard Institute), and from ANSI to JIS for your reference purpose. The tables are classified according to similar material, working pressure and general design. However, as you understand, the basic specification of material, dimensions and flanges are essentially different between JIS standard and ANSI standard.
We are not held responsible for any possible accident or damage caused by using these tables.

Comparison List - JIS to equivalent design ANSI Valves

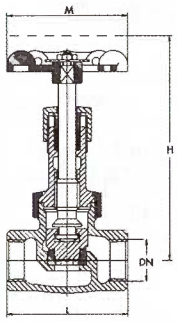
ANSI Globe Valves

Globe Valves (ANSI)
Bronze
NPT Female Treaded
Union Bonnet Metal
Seated

Globe valves with union bonnet, SS disc and hardened seat, renewable disc and seat, straight pattern, NPT female threaded connection according to ANSI B1.20.1, inside screwed stem and rising handwheel.

Application : Water, oil, air, gas, saturated steam etc.



Pressure and Temperature Range

	0/65°C	287°C
1/2" - 2"	27.5 bar	13.7 bar
	200 lbs SWP at 550° F and 400 lbs WOG at 150° F (non-shock)	

Material Specification

Gate Valves (ANSI)

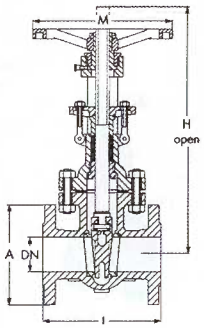
Cast Steel

ASME Flanges

Pressure Rating 150 lbs and 300 lbs

Cast steel gate valves with flexible wedge, stainless steel seats, pressure rating 150 lbs and 300 lbs, full bore, rising stem, non-rising handwheel, bolted bonnet with yoke, flanged connection acc. to ASME B16.5 ("raised face – smooth finish"), face to face acc. to ASME B16.10. On request, supplied including EN 10204 3.1.B material and test certificate.

Application: steam, water, oil, vapours and gases.



Pressure and Temperature Range

	ASTM A216 WCB

Bearings

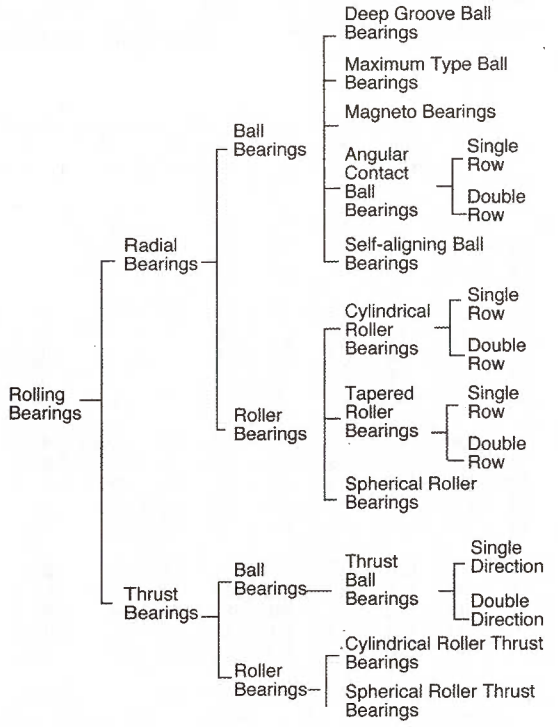
The necessary information for ordering a certain bearing type is almost always located on the bearing itself in the form of a bearing number. The bearings themselves may only have a basic number on the inner or outer ring but the outer cover or shield of the bearing will usually show the complete bearing number.

If there are several numbers marked on the bearing or the numbers have been worn out and are hard to read, the following numbers and sizes will help you in ordering the proper bearing. The bearing numbers can also be insightful as to what bearings can be used in the place of others in a situation where there are no spares. For example, double shield bearings can be used instead of single shield, or single shield bearings can be used instead of no shield, and snap ring bearings can be substituted for non snap ring bearings.

By showing the bearing numbers as well as prefixes and suffixes, the correct bearing size and construction may be obtained without sending the bearing ashore for identification or waiting until a vendor can board the ship.

Bearings should be kept in their original packing for easy identification and stored in a clean, dry place. If dirt gets mixed in with the workings of the bearings, the life of the bearings will be shortened. Therefore, only clean lubricants should be used with the bearings.

Tables for the Classification of All Bearings



Main Manufacturer's Suffix Table

Manufacturers	Manufacturers Abbreviation	One-side Metal Shielded	Two-side Metal Shielded	With Snap Ring Groove	With Groove & Snap Ring	One-side Rubber Sealed	Two-side Rubber Sealed

Single Row Deep Groove

Radial Ball Bearings

These are the most widely used ball bearing types which incorporate deep, uninterrupted raceways making the bearing suitable for radial loads or a combination of radial and thrust loads in either direction. The simple symmetrical design of these bearings makes them easy to refine to super-precision tolerance for operations at high speed.

Suffixes for Bearings

NO SUFFIX	Open type
Z	One-side metal shielded
ZZ.....	Two-side metal shielded
N	With snap ring groove
NR	With groove & snap ring
ZNR.....	One-side metal shielded with snap ring
LU or RS	One-side rubber sealed
LLU or 2RS.....	Two-side rubber sealed
C3	Radial clearance larger than normal
M	Machined brass cage, ball riding
N	Circular groove for snap ring
RSR.....	One seal
T	Moulded snap type cage of glass-fibre reinforced polyamide
ZR.....	One shield
ZRN.....	One shield•circular groove for snap ring
2RSR.....	Two seals
2ZR.....	Two shields
2ZRN.....	Two shields•circular groove for snap ring

Single Row Angular Contact Ball Bearings

The raceways of these bearings have a high shoulder on one side and a very low shoulder on the other side and the inner and outer raceways are assembled opposite to each other so that the bearings are primarily designated to carry thrust load in one direction. This construction permits use of the optimum number and size of balls for maximum load capacity. Since these bearings will carry thrust load in one direction only, they are usually mounted in a pair opposed to each other and the axial clearance is adjusted by shims, threaded members, or preloading springs. The standard contact angle is 30° and bearings made to 40° contact angle have the suffix "B".

Double Row Self-Aligning Ball Bearings

This design of bearing utilizes two rows of balls with the inner ring having two deep groove raceways while the outer ring has a single continuous spherical raceway. This permits the inner and outer rings to be misaligned relative to each other through a comparatively large angle without imposing moment loads upon the balls. This bearing is frequently used when the inner ring is to be mounted upon an adapter sleeve or when conditions in the machine make it difficult to assure accurate alignment of the inner and outer rings. The boundary dimensions of 1200 and 1300 series are identical with those of 6200 and 6300 single row deep groove bearings. Due to the small contact angle, the thrust capacity of these bearings is limited.

Cylindrical Roller Bearings

The rollers of these bearings are essentially cylindrical in shape providing modified line contact with the cylindrical inner and outer rings raceways. The rollers are accurately guided by ground ribs on either the inner ring or the outer ring, thus making these bearings suitable for heavy radial loads and high speed operation. For best results, these bearings should be accurately aligned. The cylindrical shape of the rollers allows the inner ring to have considerable axial movement relative to the outer ring except for the bearings with the prefix "NH". This feature is valuable in accommodating thermal expansion in applications where both the inner and outer ring must be press-fitted. Since the inner and outer rings can be separated from each other, the assembly of equipment is frequently facilitated.

Tapered Roller Bearings

This design utilizes conical rollers and raceways arranged so that all elements of the roller & raceway cones meet at a common apex on the axis of rotation. The roller is guided by contact between the large end of the roller and a rib on the inner rings. This construction provides high capacity for radial loads & single direction thrust loads. The bearings are usually mounted in pairs with axial adjustment to provide proper running clearance within the bearings. Being separable, the inner and outer rings may be mounted individually. For heavy thrust loads the type 30300D with large contact angle is preferable.

Spherical Roller Bearings

In this design, two rows of rollers operate in separate raceways ground into the inner ring with a guide rib to guide the rollers. The outer ring has a single spherical raceway, thus allowing the inner ring and rollers to freely compensate for angular errors due to inaccurate machine components or due to elastic deflection of the shaft or housing under loads. As a result of the line contact, a large number of rollers, and the substantial contact angle, these bearings have large radial and thrust load capacity. They are suitable for heavy shock and impact loads.

Needle Roller Bearings

The needle like small diameter rollers of these bearings are cylindrical in shape and can be fitted to spindles where you do not want a large outside mount as in roller bearings. When ordering, specify the INSIDE and OUTSIDE DIAMETER, the THICKNESS and whether the bearing should be WITH or WITHOUT inner rings.

Thrust Ball Bearings

Thrust ball bearings are composed of washer-like bearing rings with raceway grooves for the balls. The ring attached to the shaft is called the inner ring or shaft washer while that attached to the housing is called the outer ring or housing washer. In double direction thrust ball bearings, there are three rings with the central one being fixed to the shaft. Single direction and double direction thrust ball bearings can support thrust loads in one or both directions respectively. There are also thrust ball bearings with an aligning seat washer beneath the outer ring in order to compensate for shaft misalignment or mounting errors. Pressed-steel cages are usually used in the smaller bearings and machined cages are generally used in the larger ones.

Bearing Units

These are a combination of a block and a self aligning ball bearings used generally where normal loads are required. When ordering, specify the shaft diameter, distance between bolt holes, and the base-to-center height in order to attain a correct fit.

1. Lamps

Introduction for Ordering Lamps

Due to the wide variety of lamps available and in order to assist the purchase of lamps required for each individual purpose, below listed are standard illustrations of designations for bulbs, filaments and bases. Each lamp/bulb can be either specified under its full name or abbreviation.

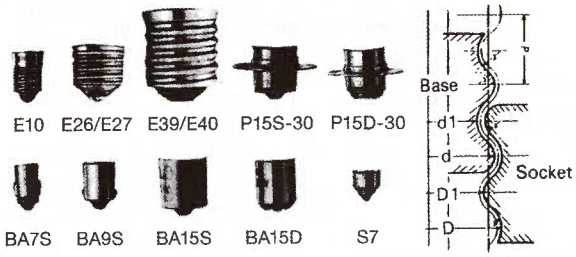
A. Bulb Designations

Bulbs are available in the shapes shown below and each shape is designed for a particular purpose. Soft glass is normally used but hard glass is used for high wattages and outdoor applications. In order to increase the effective illumination the insides of the bulbs receive various coatings, including reflecting aluminium mirrors. Coloured bulbs are also available for special applications.

Type	Name	Abbre-viation	Application
	Ordinary Shape	A	General household factory or ships illumination.
	Ball Tubular Shape	BT	Used for mercury or high sodium lamp.
	Flame Shape	C	Ornamental, Decrative Lighting
	Globe (ball) Shape	G	- " -
	Pear Shaped Straight Neck	PS	Used for Illuminations repuiring 80 Watt and more.
	Parabolic Shape	PAR	Outdoor Spot or Flood Lighting
	Reflection Shape	R	Deck Flood Light etc.
	Straight Shape	S	Low Watt Illumination
	Tubular Shape	T	General Household Factory or Ships Low Watt Illumination
	Tubular (Fluorescent) Shape	T	Fluorescent Lighting

B. Lamp Base Designations

A wide range of bases are provided for above lamps. In addition to the screw bases used for most incandescent lamps, there are also bayonet, pin, lug and other bases. Fluorescent lamps use single-pin, bipin and double-contact recessed bases.



Edison Screw Size Table

Size	Base				Socket			
	O.D.d		Valley d_1		Valley D		I.D. D_1	
	Mini	Maxi	Mini	Maxi	Mini	Maxi	Mini	Maxi
E10	9.31	9.53	8.29	8.51	9.59	9.74	8.57	8.72
E12	11.60	11.81	10.33	10.54	11.94	12.09	10.67	10.82
E14	13.61	13.89	12.01	12.29	13.97	14.16	12.37	12.56
E17	16.28	16.53	14.91	15.16	16.68	16.83	15.31	15.46
E26	26.04	26.34	24.36	24.66	26.45	26.75	24.77	25.07
E27	26.15	26.45	23.96	24.26	26.55	26.85	24.36	24.66
E39	39.05	39.50	36.55	37.00	39.61	40.06	37.07	37.52
E40	39.05	39.50	35.45	35.90	39.60	40.05	36.00	36.45

Caution !

1. E-39 based lamp can not screw into an E-40 socket while an E-40 based lamp can screw into an E-39 socket. Please see the table above and compare figures of E-39 and E-40. (d1 of E-39 is larger than that of E-40.)
2. E-26, E-27 based lamp can screw into an E-26, E-27 socket alternatively. Can be presumed to be the same size.

LED Lamps

More cost effective innovative lamp compared to conventional incandescent lamps or fluorescent lamps. LED (Light-Emitting Diodes) lamps keep lighting lifespan for several times longer and significantly more efficient than conventional incandescent lamps. Also, it consumes less energy about 90% than conventional incandescent lamps and effects to reduce of carbon dioxide.

Unit Per Pc.

LED Panel Indicating Lights

Using a LED lighting structure increases the safety of operations, and the panel indicator lights are armed with valuable reflector optics to illuminate and intensify visibility. LED light will eliminate the downtime necessary for repairs or replacements as it does not require as much maintenance as other lighting options. Simple push-in installation mounts in any thickness material. Available in five colors: white, red, green, yellow and blue.

4. Sodium Lamps / Halogen Lamps

High Pressure Sodium Lamps

A high pressure sodium lamp which gives superior colour rendition characteristics, has a rated life of 24,000 hours, a 2100°K colour temperature factor and a very high lumen output almost twice that of comparable mercury vapour lamps. For use with a high pressure sodium lamp ballast.

BT-Bulb	BT-F-Bulb	T-Bulb	R-Bulb

High Pressure Sodium Lamp Ballasts

These ballasts incorporate a high-voltage pulse generator for starting the lamp. The pulse generation does not effect the lamp during arcing. An emergency thermostat is built in to cut off the power automatically in the event of any fault. As a wide range of products with respective specifications are available, when ordering, please specify the following details.

Guide of How to order

CODE **79 12 21**
Name ..... Sodium lamp ballast
Lamp Type ..... BT
Input Voltage ..... 100 V
Lamp Wattage ..... 700 W
Lamp Ampare ..... 7.9 amp.
Frequency ..... 50/60 Hz
Lamp Dimension ..... 150mm diam x 375 mm L
Lamp Base E-39
Etc ..... If any

Electronic Superimposed Ignitors
for HS Lamps 400 W

A standard version compact shape for high pressure sodium lamps (HS).

Phasing of the ignition voltage: 60–90 °el and 240–270 °el.
Max. permitted casing temperature: 105 °C.
Fastening: male nipple with pre-assembled washer and nut.
For luminaires of protection class I and II.
For luminaires of protection class I (140594, 147707).

LED Fluorescent Lamps T8

Innovative LED fluorescent lamps, compatible with most of magnetic ballasts (CCGs) with grow start and rapid start type as direct replacement with traditional fluorescent lamps. Energy saving up to 61%, instant 100% light without flickering.

In case of Inverter Type such as FHF or electronic ballasts(ECGS), retrofit is required and wiring must be changed for direct connection.

Compact Fluorescent Light Bulbs

A compact fluorescent lamp can be replaced an incandescent lamp using less power and having a longer rated life. And can be fitted in the existing lighting fixtures formerly for incandescent if the fixtures have no closed lamp protectors. All bulbs has E-26 screw base.

Single Pin End Fluorescent Lamps

Fluorescent lamps of 20W or 40W for starter less ignition, to be operated by means of special explosion-proof ballasts on A.C. mains; the lamps are designed specifically for application in areas where an explosion hazard exists. "TL"X instant-start lamps, stabilized by special ballasts, are provided with an internal ignition strip connected to one of the electrodes. Since the electrodes are not pre-heated, only one electrical contact is required at each lamp-end. To exclude all possible sparking effects during ignition, the caps and, in particular, the long, thick lamp-pins are constructed so as to ensure maximum contact with the appropriate lamp holders.

Application

In "flameproof" and "increased safety" luminaries designed in accordance with IEC 79/1, 79/7, EN 50018 and 50019, VDE 170/171 and similar specifications, both for indoor and outdoor applications :

Germicidal Lamps

Specially designed low voltage mercury vapour lamps which radiate ultraviolet rays of 250 - 260 mm. This short wave ray is a very effective bactericide for medical and sanitary purposes, such as the germicide of food stuff in the refrigerator, table ware, cooking utensils in the galley, and barber tools, room air, etc.

This lamp comes in the same type and sizes as common fluorescent tube lamps and can be used within the same fixture.

5 sizes are available. Specify when ordering.

Unit Per Pc.

95	GL-15	15	25.5	436.0	G13	FG1P(1E)

Caution !

Do not stare directly at the lamp when it is on as GERMICIDAL rays are injurious to the eyes. Wear ordinary safety goggles.

Starters for Fluorescent Lamps

Each fluorescent lamp requires a starter for the purpose of preheating before lighting. When ordering, specify type "E" or "P" as well as the wattage of the lamps.

79 15 58	FBM-C	40	220	60	0.420	FL40	0.435

Remarks: Letters FBM of class symbol denote the ballast for marine fluorescent lamp and the last letter C denotes the choke coil type and T, the transformer type.

6. Lighting Fixtures

Lighting Fixtures

For Reflector Lamp

Can be used with a reflector lamp such as RF, RS, as cargo lights. Available in flanged base and screw clamp types. Body and base are made of brass, and shade and guard are made of stainless steel. Class of Protection is IP-56.

Flanged Base

Screw Clamp

How to order: CODE

Marine Non-Watertight Fluorescent Ceiling Lights

(Ref. JIS F 8436-1983)

Mainly used for lighting living quarters in ships at an ambient temperature of 40°C or less. Made of a steel plate with melamine resin baked finish and milky white acrylic diffuser. Glow starting with high or low power factor ballast. One, two and three lamp types, as well as surface and recessed types are available.

When ordering, please specify the voltage and frequency required.

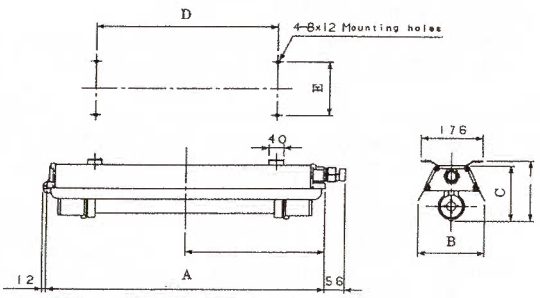
Flameproof Fluorescent Ceiling Lights

Composed of a flameproof lamp holder unit, an increased safety body and an explosion proof ballast for use in hazardous areas. Meets the requirement of the IEC standards, IP65. The body and socket are made of corrosion-proof aluminium alloy and the bolts are made of stainless steel for corrosion-proof and weather-proof.



How to order: CODE

FL ceiling light, flameproof, VOLTAGE, WATTAGE, NUMBER of LAMPS, No-GUARD TYPE or With GUARD

Specifications

Material	
Body	Corrosion-proof aluminium alloy
Socket Box	Corrosion-proof aluminium alloy
Reflector	Sheet steel
Terminal Box	Die casting
Suspension Pipe	Carbon steel
Colour & Finish	Body : Grey Reflector & socket box : White Finish : Melamin resin coating
Type of Protection	Ex des IIC T5
Degree of Protection	IEC standard 79, IP65

LED Recessed Luminaires

Triac dimming compatible, and integrated with LED linear module(s) to provide high illumination performance. Long service life of >50,000 hours L70 @ 45°C. JIS and IEC safety and EMC compliance. Mounting Method : 4 mounting brackets, Hole cut out: 638 X 211mm (2FT), 1,247 x 211 (4FT). Diffuser material: PMMA (Polymethylmethacrylate) ice crystal, Housing material: Zinc coated steel, Powder coated white. Flexible wiring, Heat resistant up to 105°C. Protection Class : IP44 in conjunction with ceiling. Available equipped type with "Battery backup system or "Emergency lighting", if required.

When ordering shades or guards for lighting fixtures ;

Shape and size are different from manufacturers for the lighting fixtures. Please specify following necessary information for your suppliers.

Manufacturer's name .....
Model / Type .....
Part number .....

Ceiling Lights
for LED Fluorescent Lamp

Energy saving LED fluorescent lamp fixture for vessel's engine room. The 24 watt type ceiling light create the illuminance as same as of conventional 40 watt type ceiling light, which save a lot of energy. The replacement work will be extremely reduced due to the long life property of LED. Material : Housing – stainless steel and diffuser – polycarbonate. Please ask your local supplier for more details.

LED Panel Lights

Made of marine grade aluminium, comes with high-efficiency light guide. Easy installation with no external drivers needed, and super slim design for surface mounted application. High-efficiency constant current driver. Long service life of 50,000 hours L70 @ 40°C. Cabin entry: 2 plastic cable glands M20, and cable max. 13mm dia. JIS and IEC safety and EMC compliance.

*Note: Replace whole unit when light not working.

PL 120 Series
353 × 353 mm

70% more energy-efficient compared to 1 × 18W fluorescent lighting system.

IP Rating Chart

The IP (International Protection, or Ingress Protection) Code consists of the letters IP followed by two digits, as defined in international standard IEC 60529.

The first digit indicates the level of protection that the enclosure provides against access to hazardous parts (e.g., electrical conductors, moving parts) and the ingress of solid foreign objects.

First Digit: Solid

Level	Object size protected against	Effective against
0	Not protected	No protection against contact and ingress of objects.
1	>50 mm	Any large surface of the body, such as the back of the hand, but no protection against deliberate contact with a body part.
2	>12.5 mm	Fingers or similar objects.
3	>2.5 mm	Tools, thick wires, etc.
4	>1 mm	Most wires, screws, etc.
5	Dust protected	Ingress of dust is not entirely prevented, but it must not enter in sufficient quantity to interfere with the satisfactory operation of the equipment; complete protection against contact.
6	Dust tight	No ingress of dust; complete protection against contact.

The second digit indicates the protection of the equipment inside the enclosure against harmful ingress of water.

Second Digit: Liquid

Level	Object size protected against	Effective against
0	Not protected	-
1	Dripping water	Dripping water (vertically falling drops) shall have no harmful effect.
2	Dripping water when tilted up to 15°	Vertically dripping water shall have no harmful effect when the enclosure is tilted at an angle up to 15° from its normal position.
3	Spraying water	Water falling as a spray at any angle up to 60° from the vertical shall have no harmful effect.
4	Splashing water	Water splashing against the enclosure from any direction shall have no harmful effect
5	Water jets	Water projected by a nozzle (6.3mm) against enclosure from any direction shall have no harmful effects.
6	Powerful water jets	Water projected in powerful jets (12.5mm nozzle) against the enclosure from any direction shall have no harmful effects.
7	Immersion up to 1 m	Ingress of water in harmful quantity shall not be possible when the enclosure is immersed in water under defined conditions of pressure and time (up to 1 m of submersion).
8	Immersion beyond 1 m	The equipment is suitable for continuous immersion in water under conditions which shall be specified by the manufacturer. Normally, this will mean that the equipment is hermetically sealed. However, with certain types of equipment, it can mean that water can enter but only in such a manner that it produces no harmful effects.

(to be continued)

LED Aisle Lights

A long life, minimize the waste cost for replacement of fluorescent lamp, also respond to Restricting the use of Hazardous Substance (RoHS). Thin-design and a self-powered ceiling, suitable for aisle light. Material: Metal frame – Aluminium, Rest frame: Polycarbonate. Operating temperature: -30 to +50°C.

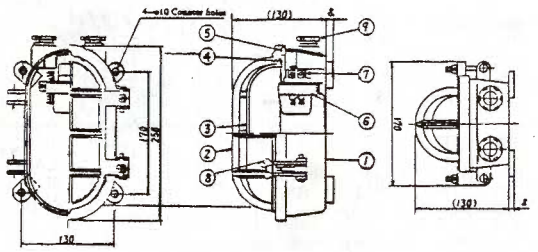
Watertight Type Passage Lights
(Ref. JIS F8441)

Watertight passage lights using incandescent lamps of 40 watts or less at 110V or less as a light source, mainly applied for weather decks aboard in a place of ambient temperature 40°C or less.



Specification

Material	1. Body	Cast Iron
	2. Guard	Cast Iron

LED Downlights

DL Series 7W 220-240VAC

Made of marine grade aluminium alloy with powder coating, comes with 4mm tempered glass. Built-in with integrated driver for ease of installation, and vibration-resistant. Energy savings of up to 90% compared to 50W halogen. Superior heat sink designed to enhance the service life. Long service life of 50,000 hours L70 @ 40°C. JIS and IEC safety and EMC compliance. Application: Cabins, Passageways, Galleys, Meeting rooms. Protection Class: IP44 in conjunction with ceiling.

Note: Replace whole unit when light is not working.

Unit Per Pc.

CODE	79 21 31
Model	DLA07030
Main Voltage	220 - 240V AC
Power	7W
CCT	3,000K
Beam Angle	60°
System Lumen	420 lm
Dimensions	Dia 103 x H 96.9 mm
Weight	0.5 kgs

DL Series 12W & 15W 220-240VAC 15W 24V DC

Made of marine grade aluminium alloy with powder coating, comes with polycarbonate diffuser. Triac dimming compatible (220-240 VAC only). Designed with reliable AC driver on board to enhance the service life. Vibration-resistant. Energy savings of up to 60% compared to compact fluorescent system. Long service life of 50,000 hours L70 @ 40°C. JIS and IEC safety and EMC compliance. Application: Cabins, Passageways, Galleys, Meeting rooms. Protection Class: IP44 in conjunction with ceiling.

*Note: Replace whole unit when light is not working.

Ideal Replacement:

DLA12040 (12W) for 18W CFL

DLA15040 (15W) for 26W CFL

Unit Per Pc.

LED Berth Lights

Special design polycarbonate diffuser to optimize the LED light transmission.

Slim profile design that is easily mounted to provide illumination performance while using significantly less energy, and useful for lighting in Passageways, Cabins, Lounges, Dinning rooms, and Accommodation areas. Long service life of 50,000 hours L70 @ 40°C. JIS and IEC safety and EMC compliance. 2 mounting holes Φ5.5mm.

Material: Diffuser- Polycarbonate, Housing- Galvanized steel, powder coated white.

Protection Class: IP20 in conjunction with ceiling.

*Note: Replace whole unit when light is not working.

Watertight Fluorescent Hand Lamps (Line Lights)

This polycarbonate cylindrical type fluorescent hand lamp with built in ballast has the following advantages:

1. This line light will not break easily if it is hit or dropped.
2. It is waterproof.
3. If the fluorescent lamp is broken inside, this line light is not liable to ignite.
4. Since pieces of broken glass will not scatter, it will not cause damage to any apparatus.
5. This line light is cold-proof so that it can be used in any cold place.

Safety Torches

Compliant with ATEX Directive

Compliant with the 2014/34/EU ATEX Explosive Atmospheres Equipment Directive. The range includes straight and right angle torch models. The torch body offers high strength and proven impact resistance even at subzero temperatures, using carefully selected thermoplastic resins with excellent chemical resistance.

The Wolf ATEX torch range is sealed dust tight and protected from water immersion, with a certified IP67 enclosure.

Personal Issue Safety Torches

These Midi, Mini and Micro Torches are certified for use in potentially explosive atmospheres. Using high-tech light sources, they give impressive performance whilst remaining compact enough for easy pocket storage. They are the perfect safety torch for any application where a small size is critical.

All five models are compliant with the 2014/34/EU Explosive Atmospheres (ATEX Equipment) Directive and certified to IECEx for use in potentially explosive gas, vapour or mist atmospheres, where a T3, T4, or T5 temperature class permits.

Unit Per Pc.

Safety LED Torches

The ATEX LED safety torch is an ATEX and IECEx certified primary cell LED safety torch using the latest technology to give excellent performance, robustness and reliability for safe use in Zones 1 and 2 potentially explosive gas, and Zones 21 and 22 dust atmospheres (TR-30+). The TR-35+ is certified to Zone 0 and zone 20.

Rechargeable Batteries

Rechargeable batteries can be brought back to life hundreds of times and are completely sealed and free from leakage. They have good temperature characteristics and superior voltage regulation at either high or low discharge currents. They are the same size as ordinary dry cells but can be employed at a minimum cost and maximum convenience for a wide variety of uses. Necessary recharging time is 14 – 16 hours.

How to order: CODE

"ALCAD" Nickel Cadmium Batteries

Alcad's robust Ni-Cd pocket plate technology is particularly well suited to the complex requirements of installations in difficult and demanding conditions, and in remote and inaccessible locations.

Versatility for industry

Alcad Single Cell nickel-cadmium (Ni-Cd) batteries offer the versatility to industry where reliable performance is crucial, even under extreme operating conditions, for example in:
• Refineries • Power plants • Onshore and offshore oil & gas applications • Substations • Airports
• Building infrastructure

Reliability for backup power application

If primary power sources fail, Alcad batteries enable your backup system to provide vital systems support to keep operations moving until primary power is restored or a controlled shutdown can be performed, including for :
• UPS (Uninterruptible Power Supply) • Switching and transmission • Emergency and security • Industrial fire monitors and alarms • Process control • Substation switchgear • Signaling

Security for starting applications

For generator starting or switching on heaters, pumps and other essential equipment in an emergency, Alcad batteries meet the specific need for high discharge, instant voltage recovery and reliable operation, even in extreme temperatures.

The LCE range has the thickest plates and is designed for applications where the battery is required to provide a reliable source of energy over relatively long discharge periods. Normally, the current is relatively low in comparison with the total stored energy and the discharges are generally infrequent. Typical uses are power backup, communications and bulk energy storage. Capacity range: 10 Ah – 375 Ah.

Standard layouts

Alcad has developed a series of standard layouts in which a battery may be ordered. Whether the battery is being installed on a rack, in a cabinet or is simply freestanding, the same configuration principles can be applied.

Recommended charging voltage:
For two level charge:
- Float level: 1.42 ± 0.01 V/cell for LCE
- High level: 1.47 - 1.70 V/cell for LCE

A high voltage will increase the speed and efficiency of the recharging.

For single level charge: 1.43 - 1.50 V/cell.

Name of Mfr. : ALCAD Limited

Lead-Acid Marine Batteries

Used on board as an electric source for communication, illumination, emergency equipment, automation, etc.

It is constructed so that it will function even when tilted at a 40° incline because the electrolytes will not spill out.

Unit Per Pc.

Maintenance-Free Lead-Acid Marine Batteries

Maintenance free type Lead-Acid Battery where no topping up is required throughout the battery life. Used on board as an electric source for communication, illumination, emergency equipment, automation, etc.

Require 24 hours for recharging the battery. Recommended operating temperature is 5-30°C

Unit Per Pc.

Battery Syringes

P.V.C. tube with rubber bulb. Used for refilling battery solution.

79 26 66	Rubber battery syringe 380 mm	Pc.

11. Plugs & Receptacles

Watertight Plugs & Receptacles
Conformed to IEC 309-1 and 309-2

Designed to meet IEC (International Electrotechnical Commission) standards and colour coding system. The configurations for plugs and receptacles are single-rated which assures proper mating of devices with the same voltage and amperage. So it is impossible to couple a plug and receptacle of different voltage and/or amperage ratings to avoid causing damage to the equipment or even personal

injury. The receptacles with Interlock device eliminate the possibility of making or breaking the circuit under load or making a haphazard connection.

Rated Voltage : 500V
Rated Current : 16/20A
Protection Degree : IP56

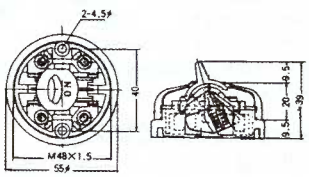
12. Switches

Non-Watertight Snap Switches

(Ref. JIS F 8840)

Non-watertight type snap switches with toggle type knob used for circuits, light fittings and small electric fittings. The rated voltage is 250V or less, DC10A and AC20A or less. Made of phenol resin. T denotes Toggle Knob type.



How to order: CODE

Snap switch, non-watertight ,TYPE, NUMBER of POLES, SIZE, RATED CAPACITY

Unit Per Pc.

CODE	Type	No. of Pole	Size mm		Rate Capacity		
					V	Ampere	
			D	H		DC	AC
79 30 01	1T	2	56	30	125	5	10
					250	2	5
79 30 02	2T	2	64	40	125	10	20
					250	5	10

Small Snap Switches

Mainly for use on radio or wireless operations.

How to order: CODE

Snap switch, TYPE of CIRCUIT, RATED CAPACITY

Unit Per Pc.

CODE	Circuit		Rated Capacity	Action	Case Size mm		
	Pole	Throw			L	W	D
79 30 06	2	1	AC125V, 5A	On-Off	27.8	17.6	22.9
07	2	2	AC125V, 5A	"	27.8	17.6	22.9

09	2	1	AC125V,25A	"	33.2	19	25.1

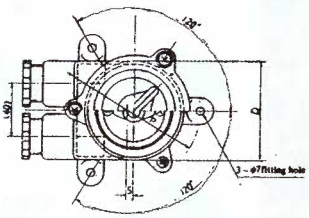
Marine Watertight Type Small Rotary Switches

(Ref. JIS F 8841)

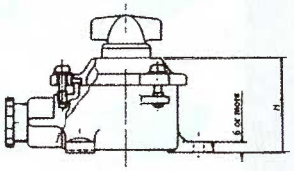
Watertight small switch used on board for lighting and small electric fittings of a rated voltage 250V or less.

Made of synthetic resin and cast iron. Single switch with one inlet and outlet gland.

1R or 2R



1MR or 2MR



How to order: CODE

Rotary switch, watertight, TYPE, NUMBER of POLES, SIZE, RATED CAPACITY

Unit Per Pc.

CODE	Type	No. of Pole	Size mm			Rated Capacity		
						V	Ampere	
			D	P	H		DC	AC
79 30 14	1R	2	74	110	68	125	5	10
						250	2	5
79 30 15	1MR					125	5	10

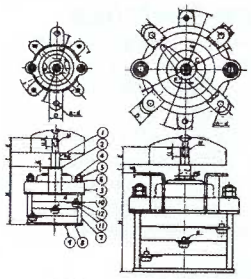
79 30 16	2R		84	120	78	125	10	20
						250	5	10
79 30 17	2MR					125	10	20
						250	5	10

Remark: Symbol R indicates Cast Iron Rotary Switch.
Symbol M indicates that the body cover and handle are synthetic resin.

Rotary Switches

(Ref. JIS F8845-1996)

Marine rotary switches used to change over the resistance circuit, lamp circuit and indication circuit (excluding electric motors) in electric apparatus.



R1, R2 R3, R4

How to order: CODE

Rotary switch, TYPE, NUMBER of POLES, SIZE, RATED CAPACITY

Unit Per Pc.

CODE	Type	Switch Rotating Angle	Circuit	No. of Pole	Rated	
					Voltage	Amp
79 30 28	R1	90° 60°	Off On	1 - 8	AC, DC 250 " " 125	6 12
79 30 38	R2			1 - 8	AC, DC 250 " " 125	10 20
79 30 46	R3			1 - 6	AC, DC 250 " " 125	30 45
79 30 54	R4			1 - 4	AC, DC 250	60

Remarks: The symbol of Type R denotes the rotary switch, and classified into R1, R2, R3, and R4 according to the rated capacity of the switch.

Cabin Flush Toggle Switches

Available in single and double type with phenol resin plate.

Single

Double

Unit Per Pc.

CODE	Switch No.	Size mm			Rated Capacity
		H	W	D	
79 30 61	Single	115	82	48	125V DC5A AC 10A or 250V DC2A AC 5A
62	Double	115	144	48	

Push Button Switches

Non-Watertight

(Ref. JIS F 8503)

Used for intercommunication and alarm systems on board. Made of phenol resin.

Rating capacity: 125V, 1 amp.
250V, 0.5 amp.

1S

1FA·1FB

2S

Unit Per Pc.

CODE	Type	Size mm				Remark
		Flush Depth	ø	L	W

Dimmer Switches

For adjusting the lights of the incandescent lamp from bright to candle glow without flickering or steps.

When ordering, please specify the power source voltage and wattage of the applicable lamp.

How to order: 79-30-96

Dimmer switch, power source voltage, wattage of the lamp (Pc.)

Knife Switches

Porcelain and synthetic resin rating 30 to 100 amperes, AC 250 volts. Used for switchboards, testing equipment, battery insulation, welders, etc., where no heavy duty service is required.

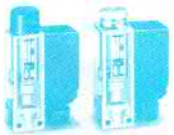
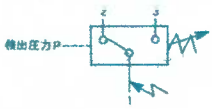
Pressure Switches



For opening or closing circuit at a set point within the adjusting range, operated by increasing or decreasing pressure. There are models actuated by diaphragm, piston, etc. The most common models are described below for your reference. Please ask for further information and brochures of various manufacturers and models available from local suppliers when required.

Diaphragm Actuated



Switching function:
Microswitch SPDT
Terminals 1-3: Contacts close on rising pressure
Terminals 1-2: Contacts open on rising pressure

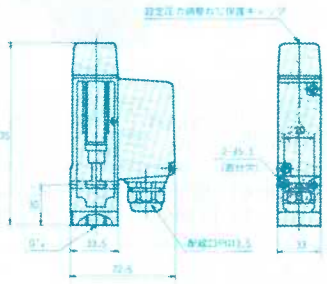
For neutral gaseous and liquid fluids. Switching pressure range 0.02 ... 30 bar.

- Pressure switches for air, gas, water, hydraulic oil, lubricating oil, light fuel oil.
- Working viscosity up to 1,000 mm^2/s.

Small size and preferred for pressure monitoring. Sealed design permits setting of differential switching points during operation without tools. Approved by shipping authorities, including German Lloyd (GL), Bureau Veritas (BV), Det Norske Veritas (DNV), Lloyd's Register of Shipping (LR), Polski Rejestr Statkow (PRS), USSR Register of Shipping (USSR), etc..

Repeatability	±2%
Switch Element	Microswitch
Protection Class	IP64
Ambient Temperature	-10 to + 80°C
Fluid Temperature	0 to +80°C
Max. Temperature at Switching Element	+80°C
Mounting Position	Optional

Setting of switching point by allen head screw protected by plastic cover



Unit Per Pc.

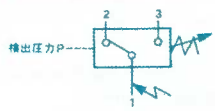
Piston Actuated



Switching function:
Microswitch SPDT
Terminals 1-3: Contacts close on rising pressure
Terminals 1-2: Contacts open on rising pressure

For neutral gaseous and liquid fluids. Switching pressure range 0.02 ... 30 bar. With soft seal, no leakage.
- For oil-treated compressed air, hydraulic oil and other fluids with good antifriction properties (state kind of fluid).
- Working viscosity up to 1,000 mm²/s.

Small design and provided with scale for easy adjustment of switching points even during operation. Design with glydring seal for application in temperatures below 0 °C. Approved by shipping authorities, including Germanischer Lloyd (GL), Bureau Veritas (BV), Det Norske Veritas (DNV), Lloyd's Register of Shipping (LR), Polski Rejestr Statkow (PRS), USSR Register of Shipping (USSR), etc..

Repeatability	±2%

Circuit Breakers

Used for the protection of circuits and electrical equipment. Capable of starting or halting current automatically to avoid damage to equipment due to circuit overload or short circuits.

Circuit breakers are mainly classified and selected according to rated current and rated breaking capacity of the circuit and where it is used.

The following matters should be specified when ordering circuit breakers.

1. **Manufacturer name and model number.**
   With this information the rated breaking capacity of the circuit can be found.
2. **No. of poles:**
   a) 2 pole (Usually used with branched circuits)
   b) 3 pole (Usually used for marine circuits)
   c) 4 pole (Usually used in industrial plants).
3. **Frame size:**
   ex. 30A, 50A, 100A, 225A, 400A, 600A.
   If the type or model number is understood, this information will not be necessary.
4. **Rated current (Trip current)**
   This current value is usually smaller than the frame size.

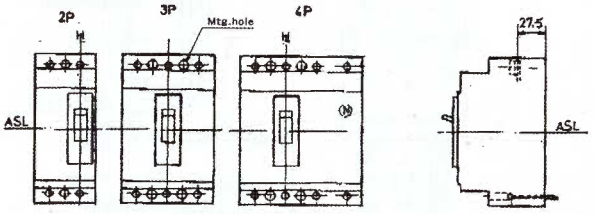
ex. Frame size	Rated current
30A	10A, 15A, 20A, 30A
50A	10A ~ 50A
60A	10A ~ 60A
100A	10A ~ 100A

   If the breaker is only instantaneous trip type, the value of the instantaneous trip current should be specified.
5. **Method of mounting**
   a) Front connected type (FC)
      - Cable or busbars are connected directly to the terminal or breaker from the front side and the breaker is fitted directly to the rear iron frame.
      - This type is seldom used for marine use. This type may only be used with a branch circuit and is not usually used in Main Switchboards.
      - Normally used for industrial purposes.

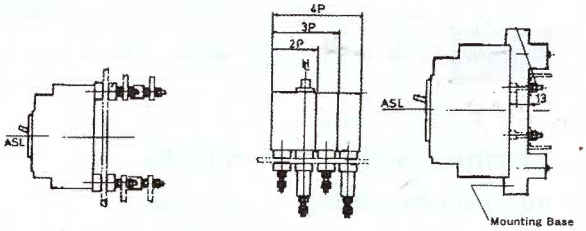
   b) Rear-connected type (RC)
      - Cable or busbars are connected directly to the rear terminal or the breaker on the rear side. This type cannot be fitted directly to the front side because the breaker is fitted directly to the rear iron frame.
      - This type is seldom used for marine use but is still used more often than the Front - connected type.

   c) Plug in type (PM)
      Cable or busbars are connected to the mounting base of the breaker, not directly to the breaker. In this way, the breaker itself can be removed from the mounting base without disconnecting the cable or busbars. This type is therefore most used for marine purposes.
6. **Accessories**
   Accessories are sometime fitted to the breaker depending on the systems and functions of the equipment they are used in.

1. Auxiliary switch (Ax. Sw.)
   Auxiliary switch opens or closes corresponding to the opening or closing of the circuit breaker. If the auxiliary switch is fitted in the breaker, the following information is required when ordering.
   a. One normal open contact
   b. One normal closed contact
   c. One normal and closed common contact
   d. Two normal open contacts
   e. Two normal closed contacts
   f. Two normal and closed common contacts
2. Alarm switch (Al, Sw.)
   Alarm switch opens or closes when the breaker trips.
   If the alarm switch is fitted to the breaker, the following-information is required when ordering.
   a. one normal open contact
   b. one normal closed contact
   c. others (Please specify how many open or closed contacts there are)
3. Under voltage trip coil
   When the circuit voltage to the breaker is insufficient, the breaker trips automatically.
   If the under voltage trip coil is fitted to the breaker, information about the voltage and frequency to the coil itself is needed:
   AC or DC_____V, _____ Hz.
4. Shunt trip coil
   The breaker trips by means of energizing the voltage to the shunt coil.
   If the shunt coil is fitted to the breaker, information about the voltage and frequency to the coil itself is needed:
   AC or DC_____V, _____ Hz.
5. Other accessories
   Accessories other than those listed above in lines 1~4 are sometimes fitted to the breaker. In such cases information about the name and type/model no. of the accessories is required when ordering.



Front-connected



Rear-connected

Plug-in

How to order: 79-31-61

Circuit Breaker with the following information:

1) Type of model number TO-100BA
2) No. of poles ..... 3 pole
3) Frame size 100A
4) Rated current 75A
5) Method of mounting ..... plug in type
   Please specify whether the mounting base is necessary, or not.
6) Accessories
   1. Auxiliary switch ..... one normal open
   2. Alarm switch ..... NIL
   3. Under voltage trip coil ... necessary AC440V, 60Hz
   4. Shunt trip coil ..... NIL
   5. Other accessories ..... NIL

Transformers

Two Way

A compact, high efficiency 2-way volt converter. Appropriate for use with electrical house appliances.

How to order: CODE

Transformer, PRIMARY VOLTAGE and SECONDARY VOLTAGE, AMPERE

Unit Per Pc.

CODE	Input-Output	Capacity	Ampere	
			Up	Down
79 33 01	110V-220V or 220V-100V	100VA	0.5	1
02		200VA	1.0	2
03		300VA	1.5	3
04		500VA	2.5	5
05		1KVA	5.0	10

Step Down for Travel use

A voltage converter designed for use of 100 volt appliances in countries with 220-240 volt current. The converter has A type 2-flat pins for inlet plug and outlet receptacle. Please mention if other types of plug or receptacle are necessary depends on your plug type of the apparatus and your receptacle type where it is used.

Unit Per Pc.

Step Up / Down Transformers

for Home Appliances

A voltage converter designed for use of 100 volt appliances in countries with 220-240 volt current, or 220-240 volt appliances in countries with 100 volt. The converter has A type 2-flat

pins single inlet plug and 2 pairs of multi type (for A type 2-flat pins and C type round pins) outlet receptacles. Please mention if other types of plug or receptacle are necessary depends on your plug type of the apparatus and your receptacle type where it is used.

Unit Per Pc.

14. Buzzers & Bells

Marine Electric Alarm Buzzers

(Ref. JIS F 8502)

For emergency or engineer alarm signalling. Used where noise levels or acoustic properties can not be covered with ordinary signals. The mechanism is enclosed inside the housing. Available for DC or AC.

Cello-Lite Cartridge Fuses

Type NC & Type NB

Totally enclosed cartridge type fuse with a large breaking capacity. Excellent current limiting characteristics with no danger of explosion or flaming at breaking. Economical because the fusing element unit is replaceable. These types are approved by N.K., Lloyd, BV, ABS, and G. Lloyd.

Cello-Lite Cartridge Fuses

Type UC & Type UB

Cartridge type non-renewable fuse with high breaking capacity and current-limiting.

Complies with the specification of JIS C 8314 for particular requirements for low-voltage cartridge fuses, and duly approved by Nippon Kaiji Kyokai (NK), The Lloyd's Register (LR), American Bureau of Shipping (ABS), Germanischer Lloyd (GL) and Bureau Veritas (BV). Due to totally enclosed non-renewable construction, it insures safe operation, not allowing any flame or gas to burst at the moment of interruption.

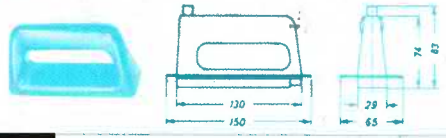
NH (HRC) Fuse Link Universal Handles

For H.R.C. or European standard fuse links. Made from bakelite with solid metal parts, zinc plated for all size knife fuses "00" to "4".



79 38 80	Handle, universal for NH (HRC) fuse link	Pc.

DIN Style Diazed Fuses

Fuse links are made from ceramic material of high compression strength to withstand high mechanical and thermal stresses. Copper alloy made top and bottom contact discs. A coloured indicator disc is fixed to the front contact plate, giving a clear indication of the state of the fuses in use. Please specify the required type of action "Time Lag" (Delayed action) or "Quick Acting" (Quick response) when ordering.

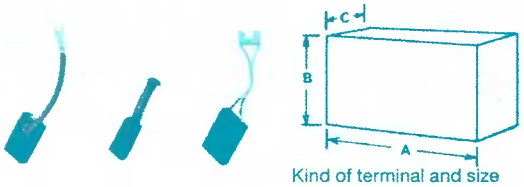
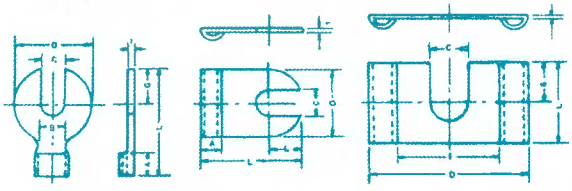
Carbon Brushes

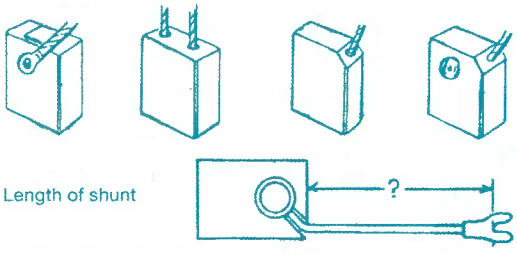
When ordering, Carbon Brushes be sure to give the style as shown with the following information. Length, width, and thickness are shown as A, B, C in the illustration.



Kind of terminal and size



Kind of wire material and how it is fixed.



Length of shunt

How to order: 79-40-96

Carbon brush, size, kind of terminal, wire material, how it is fixed, shunt length (pc.)

17. Cables

Welding Cables

Butyle Rubber Sheathed

1,000V or less – single conductor

Welding cable for general use. Cloth or paper wrapped wire sealed in rubber sheath. Furnished 200 mtrs per coil.

Unit Per Mtr

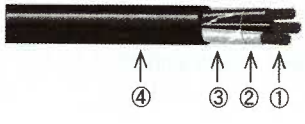
Halogen-free Covered Cables

The remarkably improved fire safety and environmental friendly cables for the ship, not emitting toxic burning fumes or thick smoke owing to Halogen-free insulation cover. Halogen-free refrers to the absence of Halogens, such as Chlorine and Fluorine, and they don't emit any harmful Hydraulic Chloride gas while existing PVC (Polyvinyl Chlorine) dose. In addition to above attractive features, the Halogen-free covered cable reduces cable weight and size to a minimum and still maintain quality, enabling easy installation. The Halogen-free range of cables are frame-retardant (IEC 60332-3).

The following designations are used for insulation materials and sheathing materials, and all materials are halogen-free; Insulation : XLPE stands for Cross-linked Polyethylene compound, and it has excellent mechanical and electrical characteristics. Sheathing : The designation SHF1 stands for Thermoplastic compound, and this material is Halogen-free, highly flame-retardant and has low smoke emission.

The listed cables are for fixed installation on all areas and on open deck in ships. However, if the cable is exposed to direct sun light protective covering or cable with black outer sheath is recommended.

Unarmoured Power and Control Cable 0.6/1 kV LKM-HF



Design	IEC 60092-353, design
1. Conductor - Standard copper conductor	IEC 60228. class 2
2.Insulation - XLPE plastic	IEC 60092-351
3.Bedding - Separator tape	-
4.Sheath - Polyolefine plastic, SHF1 - Standard colour Black	IEC 60092-359

Main Characteristics

Rated Voltage	0.6/1 kV (1.2 kV)
Max. Conductor Temperature	+90°C
Flame-retardant	IEC 60332-1-2 / IEC 60332-3-22
Halogen-free	IEC 60754 series
Smoke Emission	IEC 61034 series
Min. Recommended Installation Temperature	-15°C
Lowest Operation Temperature	-40°C
Approvals	ABS / BV / CCS / DNV / GL / KRS / LRS / RMRS / NK / RINA / TC

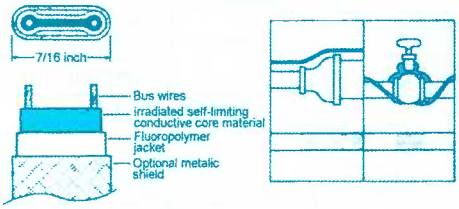
When ordering, please specify the name, capacity, type, number of the core and size of the nominal sectional area.

How to order: 79-43-80

Polychloroprene sheathed EP rubber insulated flexible power cable, type x core x sectional area

Self Limiting Parallel Circuit Heaters Auto-Trace

Auto-Trace is the electrical parallel circuit heat-tracing system. This unique technology enables the heater to vary its power output in response to sensed temperature at every point along its entire circuit. As the temperature increases, Auto-Trace automatically decreases its heat output, and vice versa. In this way, the heater continually compensates for temperature fluctuations that can lead to system failure with conventional heat tracing methods.



Has the following system features:

1. Full range of heaters for a variety of applications.
2. Complete selection of component and control system.
3. Parallel circuitry for cut-to-length convenience at the jobsite.
4. Flexibility for easy field installation.
5. Self-regulation protects against over-heating at any wattage, even when the heater is overlapped.

From among various types, the most common circuit heaters are listed below.

BTV	Electrical heat-tracing for frost protection without steam cleaning. Used for frost protection of pipes and vessels. Also, used for process temperature maintenance up to 65°C.
QTVR	Electrical heat-tracing for process temperature maintenance applications up to 110°C which are not subject to steam cleaning. Used for process temperature maintenance of pipes and vessels. Also, used for frost protection of large pipes and for applications requiring medium temperature exposure capability.
KTV	Electrical heat-tracing for process temperature maintenance applications up to 150°C which may be subject to steam cleaning. Used for process temperature maintenance of pipes and vessels. Also, used for frost protection of large pipes and for applications requiring high temperature exposure capability.

These circuit heaters are sold by meter, various spare parts are available as extra accessories. For further information, please write for or ask your supplier for catalogues.

Extension Cord Reels

Portable reels which are suitable for use in a work place which is separated from an electrical power source. Available for use with cord lengths from 20 mtrs to 50 mtrs. Contains built in outlets that provide power connections for tools and equipment.

When ordering, please specify the required cord length, voltage, ampere, type of plug and receptacle currently in use so that reel can be used properly with your equipment.

19. Solders

Quick Rechargeable Soldering Irons

A cordless portable soldering iron heated by a nickel cadmium 2.5V rechargeable battery. About 200 soldering jobs can be performed at one time in one hour of quick charging. Separate battery charger operates charging automatically when the iron is placed on it. The pilot lamp of the iron helps when working in dark places. A set includes a charger and two fine tips. For further information, please write or ask for a catalogue.

Heat Shrink Plastic Tubing

Used to insulate wires, or to bundle them together, providing abrasion resistance and environmental protection for stranded and solid wire conductors, connections, joints and terminals in electrical work. Shrink tubing will shrink one half of its nominal diameter, and less than 7% of its length, when heated.

Please specify colour of tubing, with nominal size, finish length, material of tubing.

How to order: 79-54-96

Tubing, heat shrink, plastic, NOMINAL SIZE, FINISH LENGTH, COLOUR (mtr)

Insulation Putty (Neoseal)

An insulation sealing compound called "Neoseal". This is a common solution for sealing cable entrances through walls or floors...terminal boxes. Furnished in 1 kgs pkt.

79 55 01	Putty insulation 1 kgs	Pkt

Electric Contact Restorer

Used for electrical machinery. Cleans contact points with a protective oil film and immediately restores long-lasting, good contact. (Do not apply to relay contacts.) Contains no CFC's (Chlorofluorocarbons).

Unit Per Tin

CODE	79 55 05	79 55 06
grm	157	250

Electric Contact Relay Cleaners

Cleaner for relay contacts. Simply spray it on contact points. It dissolves and removes film and dirt, to ensure reliable contact. Does not affect metals or resin. Contains no CFC's (Chlorofluorocarbons).

Unit Per Tin

CODE	79 55 10	79 55 11
grm	100	260

Electrical Industry Formula

Prevents malfunction due to the deteriorating effects of moisture and corrosion; extends operational life and reduces down-time and maintenance. Displaces moisture, lubricates and penetrates. Restores and maintains the resistivity of insulating material and improves the conductivity of contacts, commutators, etc. 16 oz aerosols.

45 05 91	Electrical industry formula CRC 2-26, 16 oz tin	Tin

Insulation Varnishes

For general use with insulation or electrical apparatus. Red and clear types available. Furnished in 300 cc spray tins or 4 ltr liquid cans.

How to order: CODE

Insulation varnish, COLOUR, CONTENTS

CODE	Colour	Contents	Unit
79 55 21	Clear	Spray, 300 cc	Tin

21. Megaphones & Loud Speakers

Transistor Powered Megaphones

High power transistor megaphone for use with R14P (UM-2) or R6P(UM-3) dry batteries. Megaphones have a well balanced, snug fitting pistol grip. Sound range in open air is 900 mtr and in cities about 300 mtr. Dry batteries are sold separately.

79 57 01 | 79 57 02 w/Siren | 79 57 03 w/Whistle | 79 57 04

22. Test Instruments

Circuit Testers

Industrial quality tester for safe, easy testing of electrical circuits, spark-plugs, motors, fuses, etc. A built in neon lamp glows if the circuit is in order.

Twin Lead

Pencil

Unit Per Pc.

CODE	Type	Voltage
79 57 21	Twin Lead	80 - 550
22	Pencil	80 - 600

Clamp Meters

Generally a current is measured by closing the clamp meter jaws over the conductor. The specially shaped mating heads of the clamp form a closed magnetic circuit with the cable passing through it.

Solar-powered Digital Multi Testers

Pocket type and high performance, magnesium dioxide lithium secondary battery powered with amorphous solar battery to store solar energy.

Basic Futures:
3-3/4 digits 4,000 count / 0.7% best accuracy / Range hold / Auto power off (15 min.) / Low power ohm (input voltage 0.4V) at continuity range / Power saving design.

Specification

Model	PS8a	
Type	Solor powered	
DCV	400m/4/40/400/500V	±(0.7%+3)
ACV	4/40/400/500V	±(2.3%+5)
Resistance	400/4k/40k/400k/4M/40MΩ	±(2.0%+5)
Continuity	Buzzer sounds at less than 10-120Ω	Open voltage
Band Width	40 - 400 Hz	
Power Source	Amorphous solar battery + manganese dioxide lithium secondary battery	
Size mm	H115 x W57 x D18	
Weight grm	85	

Name of Mfr.: Sanwa Electric Instrument Co.,Ltd.

79 57 69	Digital multi tester, solar powered model PS8a	Pc.

Insulation Testers

AC 0 – 600V

A solid state insulation tester. Constructed for the purpose of testing the insulation of household electrical appliances.

How to order: CODE

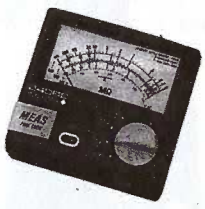
AC 0 – 1,000V

An all-transistor insulation resistance tester featuring simple push-button, operation. It has a voltmeter scale for measuring AC voltage in addition to insulation resistance. This portable instrument is used for insulation resistance measurement of electrical machines and devices, control and switching equipment, power line and cable wiring, as well as other applications.



How to order: CODE

Model	MG500
MΩ	4M/40M/400M/4,000M ±(3%+4)
Test Voltage	500/250/125V
ACV/DCV	600V (AC/DC automatic detection) ±(3%+2)
Ω	4,000Ω (Buzzer and alarm indicator) ±(3%+3)
Ω	40Ω±(3%+10)
Battery	R6 x 6
Size mm	H170 x W142 x D57
Weight grm	600
Accessories	Test lead, Strap, Instruction manual

Name of Mfr.: Sanwa Electric Instrument Co.,Ltd.

Portable Wheatstone Bridges

Portable Wheatstone Bridge is convenient for use for general resistance measurement from 1Ω to 10Ω with 4 digit accuracy. The built-in galvanometer has taut-band suspension, minimizing the effects of shock.

Since the power source is self-contained, operation is easy and simple. The instrument can be used for field tests, maintenance, and other resistance type measurements.

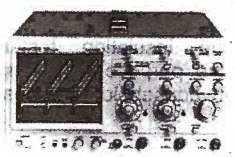
Specification

Measuring Range	1Ω to 10 Mohm in four digit reading
Minim. Division	0.001Ω
Accuracy	±0.1% 100Ω ~ 100 KΩ ±0.3% 10Ω ~ 1 MΩ ±0.6% 1Ω ~ 10 MΩ
Galvanometer Sensitivity	0.9 μA/div.
Power Source	3 x 1.5V R20 (UM-1) Dry Cell
Size	H182 x W226 x D128 mm
Weight	2 kgs

79 58 01	Wheatstone bridge, portable 1Ω to 10MΩ	Set

Oscilloscopes

An oscilloscope is an electro precision test instrument for detailed observation of the desired portion of complex waveforms. Wide range of models from different manufacturers. An outline of the basic specifications to determine the types of the oscilloscope is listed below. Before ordering, please write for, or ask for a catalogue for further information.



1. Frequency band area : _____MHz
2. Sensitivity : _____mV/div. (1 div. = 10 mm)
3. Power source currency : Alternating current, or Direct current
4. Power source voltage : _____volt
5. Frequency : _____Hz (50 or 60)

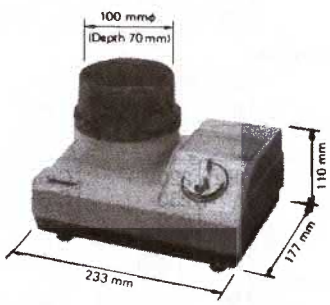
How to order: 79-58-10

Oscilloscope, with further information as
(1) Frequency band area,
(2) Sensitivity,
(3) AC or DC,
(4) Power source voltage,
(5) Frequency, etc.

23. Ultrasonic Parts Cleaners

Ultrasonic Parts Cleaners

Human ears cannot hear the sound waves produced by the ultrasonic parts cleaner because they are outside the normal audible frequency range. But they have ultrasonic power to get things really clean. When these ultrasonic waves are irradiated into the cleaning liquid, cavitation continuously occurs in the liquid and a high pressure of 1,000 atmospherics is created to clean whatever it touches. There is also the cleaning effect of the cleaning liquid agitation, removal of bubbles and emulsification so that without causing any scratches even microscopic dirt is taken away.



Specifications	
High Frequency Output	35W (average)
Ultrasonic Frequency	32KHz (average)
Power Source	AC: Transformerless type 115V ±10%
Cleaning Liquid	Neutral, acid or alkaline detergent (depending on the material used in the tank)
Cleaning Tank Material	Stainless steel
Cleaning Tank Dimension	100 mmø (inner dia.) x 70 mm (depth) (approx. 510cc max.)
Dimension	233 (W) x 177 (D) x 110 (H) mm 9-1/4" (W) x 7" (D) x 4-3/8" (H)
Weight	2.5 kgs (5.5lbs.)
Accessories	Inner tank, dripguard frame, cleaning liquid exchanger pump, sound insulation cover, basket

Objects to be Cleaned

Main Items to be cleaned	Things to be removed
Precision Products Watch, clock and components, band, spring, bearing, jewelry, engraving,etc.	Oil, dust, sweat, residue, powder, dirt
Optics Glass, lens, frame	Grinding powder, oil, dust
Electric/Electronic Components Relays, switch contactors, parts, coils, gears, moldings, springs, etc.	Elements, etchings
Laboratories Glass utensiles for laboratory analysis work, electron microscope components	Blood, medicine, bacteria, etc.

Comparison Table of Packing Products

Products from a few manufacturers are listed below for your reference. If there is some question as to what types of products are most suitable for the working conditions, please ask for further information or brochures from the local manufacturer when ordering.

In the table below, the products for each manufacturer are listed vertically according to the working conditions which are listed in the left hand column.

When ordering: Packing

1. Specify the name of the machine to be applied:Stern tube.
2. Specify the type of fluid to be applied: Sea water.
3. Specify the type of material : Non asbestos.
4. Select CODE: 81 13 02.
5. Select a manufacturer from the columns to the below: Beldam Crossley.
6. List the type number of the packing from the manufacturer: Pilotpack 5080.
7. Specify the size and length in meter per box: 3.0 mm x 15 mtr per box.

All Graphite Ribbon Packings for Valves

Pillar No. 6650

For high temperature & high pressure valves.

Performance:
Temperature -200°C to 400°C

Construction & Features :

Free-size packing of a tape shape made by corrugating both sides of all graphite sheet. It can be wound and formed in the stuffing boxes of any size of valve.

Applications:

For water, steam, oils, oil gas, solvents, heat transfer oil, LNG, strong acids and strong alkalis.

Ramie Fiber Braided Gland Packings for Stern Tube

Pillar No.426F

Structure and Features:

A gland packing made of braided hemp fibers impregnated with PTFE dispersion and white grease as lubricant.

Applications:

Ideal choice for sealing stern tube (low pressure sea water) and rubber stock. 426F can also be used for sealing rotating equipments and reciprocating equipments.

Performance:

Temperature	to 80°C
Pressure	to 0.6 MPaG (6.5 kgf/cm²)
Velocity	to 10 m/s
PV	to 3.4 MPaG · m/s (35 kgf/cm² · m/s)

Carbon Fiber Packings

Pillar No. 6527L

A packing consisting of carbon fiber woven in interlocking braids and processed with a special lubricant.

Feature:

Excellent in heat resistance and chemical resistance and ideal for pumps and agitators.

Applications:

Water, hot water, oil, solvent, strong acid, strong alkali, pumps, mixers

Performance:

PH 0 to 14
Temp. 350°C
Press. 1.6 MPa {16kgf/cm²}
Velocity 10 m/s
PV value 9.8 MPa·m/s {100 kgf/cm²·m/s}

Carbonized Synthetic Fiber Braided Versatile Gland Packings

for Rotating & Reciprocating Equipments and Valves

Pillar No. 6501L

An original gland packing made of braided carbonized synthetic fibers impregnated with micro PTFE dispersion and treated with lubricating oil to achieve superior, well-balanced performance in lubricity, flexibility and strength.

Feature:

Become a standard gland packing for the standard pumps due to its high performance such as low abrasion of the stem.

Applications:

Its versatile and high performance has made this gland packing a popular choice for use with many types of rotating equipments as well as reciprocating valves. It is also great for use with stern tubes and rudder stocks.

Performance:

Temperature	to 200°C (Over 80°C, external cooling required)
Pressure	to 1.0 MPaG (10 kgf/cm²)
Velocity	to 20 m/s
PV	to 9.8 MPaG · m/s (100 kgf/cm² · m/s).

Carbonized Fiber Braided Versatile Gland Packings

for Rotating & Reciprocating Equipments and Valves

Pillar No. 6521L

A packing made of carbonized fiber which is impregnated with the PTFE resin liquid and interlocking braided into square and then impregnated with a special lubricant after.

Feature:

A sister product of Style 6501L, has further been improved in its pressure-proof property and has characteristics that its sealing property is less influenced by pressure fluctuation of pump and it is stable when used for a large-sized shaft.

Applications:

Water, hot water, oil, solvent, weak acid, weak alkali, pumps, mixers, sterntubes.

Performance:

pH 2 to 12
Temp. 200°C
Press. 1.2 MPa {12.5 kgf/cm²}
Velocity 20 m/s
PV value 9.8 MPa·m/s {100 kgf/cm²·m/s}

PTFE Fiber Braided Gland Packings

Pillar No. 4505L

Structure & Features:

A Square-braided packing consisting of PTFE (Polytetrafluoroethylene resin) fiber impregnated with PTFE dispersion and lubricant. It has good so solvent and chemical resistance.

Applications:

Solvents, strong acid, strong alkali, pumps, valves, mixers.

Performance:

pH	0 to 14
Temperature	-100 to 260°C (Over 80°C, external cooling required)
Pressure	to 1.0 MPaG (10 kgf/cm²). (in pumps) to 10.3 MPagG(106 kgf/cm²).(in valves)
Velocity	to 10 m/s
PV	to 4.9 MPaG · m/s (50 kgf/cm² · m/s)

Pillarfoil Braided Packings

Mark III Combi for High Temperature & Pressure Valves

Pillar No.6710CH

A Pillarfoil packing braid over braid, reinforced by NCF600 wire. Suitable used for adapter packings to combine

with Pillar style 6616CH. When ordering, please specify outer dia size, inner dia size and height of the packing due to make to order.

Performance :

Temperature	-200 to 600°C (Maximum temperature in oxidizing atmosphere : 450°C)
Pressure	77.6 MPa {791 kgf/cm²} (ASME class 4500)

Application :

Water, Steam, Oil, Heat transfer oil, Solvent, Gas, Acid, Alkali, High pressure valves, Heat transfer oil valves, High pressure gas valves.

How to order: 81 - 04 - 16

Pillarfoil braided packing, Mark III Combi, Pillar style 6710CH, OUTER DIA, INNER DIA, HEIGHT in mm

Pillarfoil Packings

for High Pressure & High Temperature & Pressure Valves

Pillar No.6616CH

This is pure graphite wire mesh inserted, one cut type, high performance packing. Use style 6616CH in combination with style 6710CH.

Performance :

Temperature (Maximum	-200 to 600°C temperature in oxidizing atmosphere : 450°C)
Pressure	77.6 MPa {791 kgf/cm²} Class 4500

Application :

High pressure & High temperature valves, LNG valves

How to order: 81 - 04 - 17

Pillarfoil packing, Pillar No. 6616CH, OUTER DIA, INNER DIA, HEIGHT in mm

High-Intensity Aramid Fiber Braided Gland Packings

for Slurry Pump

Pillar No. 4526L

Structure:

A braided packing made of highly resistant aramid fibers treated with PTFE dispersion and lubricant.

Feature:

The packing stay flexible thanks to the original interlocked braiding technology.

Applications :

An ideal choice for applications that require packings made of strong fibers, such as slurry pumps.

Performance :

Temperature	to 260°C (Over 80°C, external cooling required)
Pressure	to 1.6 MPaG (16 kgf/cm²)(in pump) to 10.3 MPaG(106 kgf/cm²)(in valve)
Velocity	to 16 m/s
PV	to 14.7 MPaG · m/s (150 kgf/cm² · m/s)

Aramid Fiber Braided White Gland Packings

for Rotating Equipment

Pillar No. 4536WL

Structure:

A white gland packing made of aramid-fiber-covered yarn. It is treated with special lubricant and PTFE to ensure good lubricity.

Feature: It has outstanding flexibility and sealing properties.

Applications:

For rotating equipments that require white packings.

Performance:

Temperature	to 260°C (Over 80°C, external cooling required)
Pressure	to 1.0 MPaG (10 kgf/cm²)
Velocity	to 10 m/s
PV	to 6.5 MPaG · m/s (150 kgf/cm² · m/s)

Particular-processed PTFE Fiber Braided Gland Packings

for Chemical Pumps

Pillar No. 4527L

Structure:

A packing consisting of the PTFE fiber, and containing highly pure graphite and a special lubricant woven into interlocked braids.

Features:

Achieved high sealing performance and chemical resistance by the flexibility obtained from interlocked braiding technology.

Applications:

Recommended for use with chemical transfer pumps.

Performance :

pH	0 to 14
Temperature	-100°C to 260°C (Over 80°C, external cooling required)
Pressure	to 1.2 MPaG (12.5 kgf/cm²)
Velocity	to 20 m/s

Non-Asbestos Braided Packings
for Low-Torque Adjusting Valves

Pillar No. 4519

PTFE fiber covers the inner core which is made of spun carbon fiber threads. This packing is a combination of the excellent features of PTFE in chemical resistance and the heat resistance and elasticity of carbon fiber. The low friction surface of this fiber makes it suitable particularly for adjusting valves in which smooth revolution of the valve rod is especially important.

Performance:

pH	0 to 14
Temperature	260°C
Pressure	Class 600
Fluid	Oil solvent, acid, alkali.

Applications : For valves, control valves.

Braided Gland Packings
for High Temp. Pump

Pillar No. 6733

Structure:

A gland packing made of braided aramid-fibre-reinforced braided expanded graphite yarn.

Features and Applications:

Treated with highly thermally resistant lubricant and is great for use with high-temperature high-pressure pumps, such as boiler feed pumps and boiler circulation pumps.

Performance:

Temperature	to 350°C
Pressure	to 2.0 MPaG (20 kgf/cm²)
Velocity	to 20 m/s
PV	to 19.6 MPaG · m/s (200 kgf/cm² · m/s)

Braided Gland Packings
for High Temperature and High Pressure Valves

Pillar No. 6711

Structure:

A graphite packing made of braided expanded graphite yarn reinforced with NCF600 wire with its surface being coated with graphite powder.

Features:

Can be used without top and bottom adaptor packing.

Application:

It is suitable for high-temperature and high pressure valves.

Performance :

Temperature	-200 to 600°C (at oxygen atmosphere limited to 450°C)
Pressure	to 25.9 MPaG (264 kgf/cm²) (Class 1500)

Pilotpack 67 Packings
for Sea and Fresh Water

Beldam Pilotpack 67

Plaited from high grade flax blended with other natural fibres carefully selected to provide a high wet strength when in contact with sea water thereby ensuring a long packing life. Each strand is throughly impregnated with a special water resistant mica lubricant before plaiting.

Performance:

Max. Temperature	120°C
Pressure	70 bar
pH	5 - 9
Speed	8 m/s

Applications:

Reciprocating, rotary and static, Stern glands and in smaller sizes general purpose water packing.

How to order: CODE

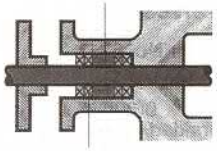
All-purpose Grand Packings

Threebond No.5910

No.5910



Old Grand Packing

Preformed in triangle shape for easy installation and can be fitted into any size or any shape of stuffing box due to self expansion performance by built-in air bubbles.

Performance :

Temperature	-200 to 300°C
Pressure	1,400 kg/cm²
Fluid	Oxalic acid, Alkali, Alcohol, Organic solvent

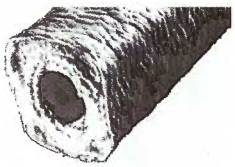
Applications:

Chemical pumps, Turbine pumps, Vertical pumps, Plunger pumps, Centrifugal pumps, Reciprocating pumps, Gate valves, Globe valves, Air valves, Solenoid valves

81 07 15	Grand packing, all-purpose Threebond No.5910, 1 kgs/box	Box

Tank Lid Packings

Pilot Lidpack 3800



Constructions:

Specially developed to seal marine cargo tank lids. The PTFE outer cover gives complete protection to the packing and is abrasion resistant. The unique core construction enables the packing to be welded together to form an endless seal, thus preventing the chance of any leakage at the joint.

Performance :

Max. Temperature	100°C
Pressure	1 Bar
pH	1 to 14.

Applications :

For static cargo or chemical tanks, and acids, alkalis, oils, solvents, chemicals and edible products.

In coils or cut to size upon request. Also available in square or rectangular sections as required.

Unit Per Mtr

Tankatite 440

Constructed from a resilient elastomeric core spirally wrapped with P.T.F.E. tape for added chemical protection. The core is then surrounded with successive braided jackets of inert polypropylene which is wrapped with further layers of P.T.F.E. tape and finally enclosed in braid of P.T.F.E. yarns. Tankatite 440 provides a reliable seal for tank lids, main hatches, and cleaning covers on tankers carrying all known bulk liquid cargoes in all IMO classes.

It will protect the cargo from sea-water ingress and prevent any environmental contamination by the cargo itself.

Tankatite 440 meets U.S. Coast Guard requirements for tank lid sealing of hazardous cargoes and is pressure tight beyond Lloyds and Det Norske Veritas (DNV) test criteria. Any reasonable length can be supplied in square or rectangular from 12.5 mm upwards, or can be supplied in factory produced endless ring form to exactly fit the tank lid recess.

Non-Asbestos Universal Packings

Pilotpack 5080

A firm compression packing of the crossplait type designed for effective sealing over a wide scope of static or dynamic applications. The packing is a composite of two base fibres that provide good heat dissipation, abrasion resistance, with the ability to withstand high pressures. The packing also possesses a surface lubricant for initial bedding-in purposes that aids longer term performance.

Performance :

Max. Temperature	300
Pressure	Up to 350 bar
pH	1 - 14
Speed	Up to 25 m/s-1

Applications :

Pumps and valves, Condensates, Dilute acids and alkalis, Oils, Solvents, Abrasive Media, Steam and water.

Pilotpack 8113 Packings

for Oils, Hot Water and Steam

Greasy graphited, general purpose, non-asbestos, pump and valve packing. Each strand or high temperature BCX yarn is impregnated with a graphite lubricant to give good, firm, uniformly lubricated packing with a low coefficient of friction.

Performance:

Max. Temperature	400°C
Pressure	100 bar
pH	3 - 12
Speed	10 m/s

Applications :
Rotary, reciprocating and static. Saturated steam, hot water, hot air and gases. Piston rods and valves rods. Ballast, bilge and cargo feed pumps.

Pillarfoil Braided Packings (Mark VII)

for manhole Cover

Pillar No. 6114-M

This is made of flexible graphite yarn reinforced by organic fiber and braided. This flexible graphite material is pretreated on its surface to obtain low torque properties as well as sealability.

Performance:
Temperature 400°C
Fluid Hot air, exhaust gas, dust.

Applications: For manhole packing

How to order: 81 - 13 - 45

Pillarfoil braided packing, (Mark VII), Pillar No. 6114-M, SIZE mm x LENGTH mtr

Low Friction Type Braided Gland Packings

for High Temperature & High Pressure Valves

Pillar No. 6315CH

Structure:
A gland packing made of braided expanded graphite yarn reinforced with stainless wire.

Features:
Its surface is coated with lubricant and graphite powder to minimize the sliding resistance of the valve stem.

Applications:
Suitable for use with high-temperature and pressure valves.

Performance:
Temperature -200 to 600°C
(at oxygen atmosphere limited to 450°C)
Pressure to 25.9 MPaG (264 kgf/cm²)
ANSI Class 1500

Grafan Fibre & Inconel Wire Packings

Vulcan VR31

Braided packings constructed from 100% Grafan yarns to form truly exceptional capability and performance. It is additional reinforced with inconel wire to create the packing for high temperature, high pressure valves. Can be merely cut to length and spiraled into the gland. Extreme condition, long life and zero leakage packing for all uses up to high temperature, high pressure, high speed applications on pumps, valves, mixers, agitators, expansion joints, ball valve seats and other static seals. It is designed for use in static applications only. Against all acids, alkalis and solvents (except very strong oxidizers), gases, feed water and superheated, or saturated, steam.

Service Capability	
Pressure rating: 360 Bar	Rotary speed: 1 m/s
Temperature: -200 + 3,000 deg.C (Inert ATM)	
Temperature: -200 + 600 deg.C (In air)	
pH range: 0-14

PTFE Graphite Fibre Packings

Vulcan VP2

Manufactured from 100% Vulcan type G1 fibre. This newly developed outstanding yarn is very similar in material construction to the original GORE GFO fibre and has been manufactured to optimise performance at an improved cost. They will increase service life whilst minimizing wear and gland adjustments, against nearly all media in static, rotary and reciprocating uses.

Service Capability	
Pressure rating : 150 Bar	Rotary speed : 25 m/s
Temperature : -200 + 280°C	pH range : 0 - 14

Non-Asbestos Gland Packings

Carbon Fiber Based

For Water & Oil Pumps
Valqua® No. 6201

Coil packing made of carbonized fabric yarn, processed with PTFE dispersion and lubricating oil, then

braided into a square cross-section and finished with PTFE, fine graphite and lubricating oil.

Features:
- Serviceable for relatively versatile fluids.
- Allows permissible PV value and shaft speed limit.
- Reduced shaft wear due to packing.

Temperature	Pressure	pH	Speed
200°C / 392°F	1 MPa	2 to 12	20 m/s

Unit Per Box

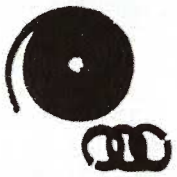
For General Use Valves & Reciprocating Motion Machines
Valqua® No. 6232



Coil packing made of carbon fiber yarns, processed with PTFE dispersion and lubricating oil, then braided into a square-cross section and finished with PTFE, fine graphite and lubricating oil.

Features:
- Good compatibility with shafts means excellent sealing property even at low tightening pressures.
- Suitable for almost all fluids except for strong oxidizing fluids.

Temperature	Pressure	pH
260°C / 500°F	10.3 MPa	0 to 14

Unit Per Box

Shaft Seal Gland Packings

PTFE Fiber Based

For Corrosive Fluid Valves
VALQUA® No. 7233

Coil packing made of PTFE fiber yarns, processed with PTFE dispersion, then braided into a square cross-section.

Features:
- Made of 100% PTFE, and therefore resistant to almost all fluids. Best suited for chemical use valve shaft seals for handling corrosive fluids.
- When low torque or gas sealing properties are required, use the following products which are treated with lubricating oil:
- No. 7233 (O) for general gas-based fluids.
- No. 7233 (SO) for low-temperature use of inflammable gas and liquefied gas.
- No. 7233 (FO) for gas susceptible to burning, such as oxygen and ozone.
- Compliant with the Food Sanitation Law, and the Regulations concerning Food & Additives.

Temperature	Pressure	pH
260°C / 500°F	10.3 MPa	0 to 14

Special Fiber Based

For Low & Medium Shaft Speed Pumps and Rotary Equipment
Valqua® No. 8132

Coil packing made of blended yarn of aramid fibers and of artificial inorganic fibers treated with PTFE dispersion, braided into a square cross section, and then finished soft with PTFE dispersion and lubricating oil.

Features:
- Flexible and compatible with shafts.
- Being white, can be used for fluid applications where black should be avoided.
- Can be used as shaft seals of pumps for handling water-based and oil-based fluids as well as weak acid and weak alkaline fluids.
- Also used as shaft seals for rotating machines where contamination is undesirable, such as mixers and agitators.

For rotating machines
Valqua® No. 8137

Coil packing made of blended yarn of aramid fibers and of artificial inorganic fibers treated with PTFE dispersion, braided into a square cross-section, then finished with PTFE dispersion.

Features:
- White clean packing without lubricating oil.
- Excellent cost per performance.
- Can be widely used for general-use valves as well as for shaft seals of agitators and plunger pumps.

Temperature	Pressure	pH	Speed
260°C / 500°F	14.7 MPa	2 to 13	1 m/s

Note(1) For manufacturing reasons, rectangular products with a cross section of 3 mm x 5 mm are available.

Flexible Graphite Based

For General Use Valves
Valqua® No. VFT-22

Coil packing made of expanded graphite yarn clad with PTFE film, and braided into a square cross-section, that is, gland packing that makes use of the features of each material.

Features:
- Excellent in sealing property and durability with expanded graphite as the major material.
- Low stem friction as the surface is clad with PTFE.

Temperature	Pressure	pH
300°C / 572°F	10.3 MPa	0 to 14

Unit Per Box

For High Temperature & High Pressure Valves
Valqua® No. VFX-15

A coil packing made of expanded graphite yarns reinforced with metal wire, braided into a square cross-section treated with lubricant oil.

Features:
- Can be used individually as a stem seal.
- Higher cost performance than existing graphite packing.

Temperature	Pressure	pH
650 (400)(1)°C / 1202 (752)°F	25.9 MPa	0 to 14

Note(1) Temperature limit in air.

Comparison Table of Gaskets

Products from a few manufacturers are listed below for your reference. If there is some question as to what types of products are most suitable for the condition of use, please ask for further information or brochures from the local manufacturer when ordering.

In the table, the products for each manufacturer are listed vertically according to the working conditions which are listed in the left hand column.

When ordering: Gasket

1. Select the purpose: All purpose.
2. Specify the name of the machine to be applied: Pump, valve, etc.
3. Specify the type of material: Non-asbestos.
4. Select the CODE: 81 11 00.
5. Select a manufacturer from (one of) the columns to the right: Beldam Crossley.
6. List the type number of the gasket from the manufacturer: Pilotseal 178.
7. Specify the thickness and size (Width x Length) in mm. 1.0 mm x 1,500 x 1,500 mm.

Comparison Table of Non-Asbestos Gaskets

Graphite Joint Sheet Gaskets

Pillar No. 5650

A joint sheet gasket made of graphite black lead and aramid fiber bound with a rubber binder.

Feature:
1. Highly thermally resistant.
2. High mechanical strength.
3. Non-adhesive to flange surfaces.
4. Great workability.

Applications:

Gaskets for pipe flanges, maintenance hatches, and valve bonnets. Especially suitable for use with pipes that carry saturated vapors.

Performance:

Temperature -100 to 260°C
Pressure up to 5.2 MPaG (ASME Class 300)

Unit Per Sht.

Expanded Graphite Joint Sheet Gaskets

Pillar No. 5600

Structure:

A joint sheet gasket made of expanded graphite, inorganic-fiber and aramid fiber bound with a rubber binder.

Feature:
1. Very flexible.
2. Highly thermally resistant.

3. Great gas-sealing performance.
4. Roll-upable for compact storage.

Applications:
Gaskets for pipe flanges, maintenance hatches, and valve bonnets. Especially suitable for use with pipes that carry saturated vapors.

Performance:
Temperature -50 to 260°C
Pressure up to 4.0 MPaG

Unit Per Sht

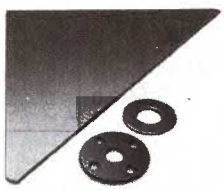
Tear Resistant Type Graphite Sheet Gaskets
for High Temperature Sheet Gasket

Pillar No. 6633
Structure:
An expanded graphite sheet gasket reinforced with stainless steel foil to protect against tearing and improve ease of handling.



Features:
1. Extremely thermally resistant.
2. Tear resistant.
3. Easily cut with a knife or scissors.
4. Highly chemically resistant.

Applications:
Suitable for use with pipe flanges and other types of applications that require gaskets with thermal resistance and anti-chemical properties.

Performance :
Temperature -200 to 400°C
Pressure up to 5.2 MPaG

Unit Per Sht

CODE	Thick mm	Size mm	CODE	Thick mm	Size mm

Joint Sheet Gaskets
(Common Used)

Pillar No. 5611
Structure:
A joint sheet gasket made of inorganic fiber and aramid fiber bound with a rubber binder.

Features:
1. High mechanical strength.
2. Superior fit with flange surfaces that ensures high sealing performance.
3. Great workability.

Applications:
Gasket for pipe flanges, maintenance hatches, and valve bonnets. Especially suitable for use with pipes that carry room-temperature water or oil.

Performance:
Temperature -50 to 120°C
Pressure up to 3.3 MPaG

Unit Per Sht

Vegetable Fiber Oil-Proof Joint Sheets

Construction & Features:
Made of chemically treated vegetable fiber. For packing against gasoline, oil, water, and lubricating oil.

Performance:
Temperature 100°C
Pressure 1.0 MPa (10 kgf/cm²).

Applications:
Gasket for oil pumps, crank cases, transmission covers, gasoline pumps, oil drums, etc.

Unit Per Sht

CODE	Thick mm	Size mm	CODE	Thick mm	Size mm

7TH 81

Viton Rubber Sheets

Viton sheeting, known as fluoroelastomer or FKM, is highly appreciated for the most demanding industrial applications as it has the highest resistance to hydrocarbons, acids, alkalis and even oxidants, and its mechanical properties remain intact at temperatures of up to 200°C.

- Tensile strength : 6 – 8 MPA
- Elongation : 300%
- High temperature : 200°C
- Hardness 75+/15 Shore A

Applications:

Industrial maintenance (oils / high temperature) / Sealing

Unit Per Mtr

CODE	Thickness × Width mm	Temperature	Shore Hardness	Article No.

Cotton Insertion Rubber Joint Sheets

Construction:

Cotton inserted natural rubber sheet.

Applications:

For the same use as a natural rubber sheet.

Unit Per Mtr

CODE	Thick mm	Sheet Size mm	CODE	Thick mm	Sheet Size mm
81 11 51	1.5				
52	2.0	1,000 × 1,000	81 11 53	3.0	1,000 × 1,000

Canvas Inserted Rubber Joint Sheets

Construction & Features:

Made of quality, strong canvas inserted onto rubber sheet in the same way as cotton insertions but this construction is more durable.

Unit Per Mtr

CODE	Thick mm	Sheet Size mm	CODE	Thick mm	Sheet Size mm
81 11 61	1.0		81 11 64	3.0

Non-Asbestos Mica Jointing Sheets

Pilotseal Jointing (201)

Non-asbestos jointing material for use in the sealing of hot, dry gases.

Performance:

Max. Temperature	900°C
Max. Pressure	20 bar
Tensile Strength	20 MPa
Density	1.72 g/cm³

Applications :

For use in refractory underlays, metal foundries, exhaust

manifolds and as thermal insulation and sealing gasket within a wide range of industries.

Unit Per Sht

CODE	Thick mm	Size mm	CODE	Thick mm	Size mm
81 12 63	0.5		**81 12 66**	1.5

65	1.3		**68**	3.0	

Pilot Non-Asbestos Jointing Pilotseal 172

for Steam, Water, Oils, Gases, Dilute Acids and Alkalis

High quality compressed jointing manufactured from heat resistant fibre and polymer.

The anti-stick graphite silver finish facilities easy gasket removal and flange cleaning

Performance:

Max. Temperature	475°C
Max. Pressure	13.8 N/mm² (2,000 psi)
Tensile Strength	10.3 N/mm² (1,500 psi)
Density	1.4 gm/cc

Applications:

For sealing against steam, water, oils, gases, dilute acids and alkalis.

Unit Per Sht

CODE	Thick mm	Size mm	CODE	Thick mm	Size mm
81 12 80	0.5		**81 12 83**	1.5

Expand Metal Insert Graphite Joint Sheets

Novaphit SSTC

The highest quality gasket material based on pure exfoliated graphite with a stainless steel mesh reinforcement and no binders or adhesives. It is easier to cut than the traditional tang metal reinforced graphite and it is fire-safe approved by Lloyds. It exhibits virtually no creep in service. Available in sheet form or as a Cut Gasket to suit standard or non-standard flanges.

Performance:

Temperature	-240°C to 550°C Steam 360°C (max)
Stress Relaxation	300/C - 43 N/mm² (approx)
DIN 52913	175/C - 45 N/mm² (approx)

Applications:

For sealing high pressure steam, most hydrocarbons, solvents, flammable liquids, fuels, gases, alkalis and many acids.

Unit Per Sht

CODE	Thick mm	Size mm	CODE	Thick mm	Size mm
81 12 86	1.0		**81 12 88**	2.0

Non-Asbestos Jointing Pilotseal 178

for Steam, Water, Oils, Gases, Dilute Acids and Alkalis

General service non-asbestos jointing manufactured from heat resistant synthetic fibre and polymer. The printed green 25mm squares assist when cutting and making gaskets.

Performance:

Max. Temperature	400°C
Max. Pressure	6.9 N/mm²
Tensile Strength	10.3 N/mm² (1,500 psi)
Density	1.95 gm/cc

Applications :

For sealing against steam, water, oils, gases, dilute acids and alkalis.

Unit Per Sht

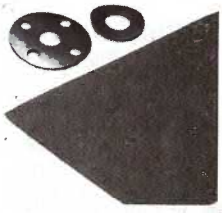
High-Strength Rubber Sheet Gaskets

Reinforced in Aramid Fiber



Pillar No.5003-NBR

Structure:

An NBR rubber sheet gasket reinforced with short aramid fibers.

Feature

1. High sealing performance.
2. Low stress relaxation and high mechanical strength.
3. High insulation performance.

Applications:

- Flange gaskets for water (including sea water) pipes
- Insulation gaskets
- Flanges for watertight test

Performance:

Temperature	-30 to 120°C
Pressure	up to 2.6 MPaG

Unit Per Sht

CODE	Thick mm	Size mm	CODE	Thick mm	Size mm
81 13 55	1.5		**81 13 57**	3.0

Low Creep PTFE Sheet Gaskets

Mixed with Selectable Fillers

Pillar No.4001, 4002, and 4003

Structure:

PTFE sheet gaskets with fillers.

Features & Applications:

Protected from creeping of PTFE sheet gasket by using different types of filler.

4001: High anti-creeping and acid-resistance properties. It is best suitable to the strong acid, hydrocarbon, water, steam, etc.

4002: Good compression property and superior fit with flange surfaces. It is also best suitable to the lining flange, etc. tightened at low torque, and to the substitution of enveloped gasket.

4003: High anti-creeping and alkaline-resistance properties. It is best suitable to the strong alkali and oxygen, and is also applicable safely to the food application in safe.

Properties and Performance

Pillar No.	4001	4002	4003
Hue (Colour)	Light brown	Aqua blue	White
Filler	Silicone dioxide low creep acid resistance	Particular glass compressible fit in well	Barium oxide low creep alkali-resistant

Bi-directional PTFE Gasketing Materials

SICHEM S11

A bi-directional orientated gasketing material on PTFE-basis, filled with silica, designed to achieve the lowest creep values and seal integrity, combining excellent chemical resistance and optimal sealing performances. Can be used for applications with pH-range from 0 to 14 with exception to hydrogen fluoride, fluorine compounds and molten alkali metals.

Applications:
For all types of flanges joint connections in maritime applications in all sizes for temperatures from -260°C/+260°C and pressures classes up to 80 Bar

Characteristics :
Density: 2.2 g/cm³
Leckage DIN 3535 = < 0.05 mg/(s*m)
KSW DIN 28090-2 = < 4.0%
KRW DIN 28090-2 = >1.7%
WSW DIN 28090-2 = <24%
Tensile Strength ASTM F 152 = 15 N/mm²

Characteristics Certifications:
* FDA-Approval BAM proofed for gaseous oxygen until 40 bar and +225°C
* Cryogenic application approved EN 13555 (Qmin, Qsmin, PQR, ...)
* TA-Luft + Blow out test DNV GL, DVGW

High Performance Non-Asbestos Sheets

BLACKHYPER™
Valqua® No. GF300

This gasket is mainly composed of PTFE as a binder and doesn't contain any rubber.

Features:
- Very minor change in physical properties even under high temperatures.
- Excellent chemical resistance.
- Excellent heat resistance.
- Easy to handle.
- Does not harden easily.
- No hardening makes retightening possible.

Temperature	Pressure
-200 to 300°C / -328 to 572°F	Max 3.5 MPa

Suitable fluids: General fluids (water, steam, oil, etc.), solvents, liquefied gas
Applications: Pipe flanges, valve bonnets, towers & tanks, pressure vessels and heat exchangers
Color type: Black
Print color: Black

The ring molded article supports JPI (ASME / ANSI).

Unit Per Sht

CODE	Thickness (mm)	CODE	Thickness (mm)
1,270 × 1,270 (mm)		1,500 × 1,500 (mm)	
81 56 01	1.0	**81 56 03**	3.0
02	1.5		

Compressed Non-Asbestos Fiber Sheets

Compressed Non-Asbestos Fiber Sheets are rolled and vulcanized sheet-type gasket materials, in which special rubber binders and a small amount of filler material are mixed with organic and inorganic fibers.

General use type
Valqua® No. 6500

Features:
- An economical option
- Easy to handle

Temperature	Pressure
-50 to 183°C / -58 to 361°F	Max 3 MPa

Suitable fluids: General fluids (water, steam, oil, etc.), liquefied gas
Applications: Pipe flanges, valve bonnets and other equipment used in various industries
Color type: Blue
Print color: Black

The ring molded article supports JPI (ASME / ANSI).

Unit Per Sht

CODE	Thickness (mm)	CODE	Thickness (mm)

06	1.5	**09**	1.5
07	3.0	**10**	3.0

Anti-corrosion type
Valqua® No. 6500AC

This gasket is low in leachable chloride.

Feature:
- Corrosion suppressive

Temperature	Pressure
-50 to 183°C / -58 to 361°F	Max 3 MPa

Suitable fluids: General fluids (water, steam, oil, etc.), liquefied gas

Applications: Stainless steel pipe flanges, valve bonnets and other equipment used in various industries requiring corrosion resistance
Color type: Blue
Print color: Orange

Unit Per Sht

CODE	Thickness (mm)	CODE	Thickness (mm)

12	1.5	**15**	1.5
13	3.0	**16**	3.0

High cost performance type
Valqua® No. 6509

This gasket was developed for low-pressure application.

Features:
- Superior cost performance.
- Easy to handle and good workability.

Temperature	Pressure
-50 to 160°C / -58 to 320°F	Max 2.5MPa

Suitable fluids: General fluids (water, steam, oil, etc.), liquefied gas
Applications: Pipe flange, valve bonnets and covers of other equipment
Color type: Blue
Print color: Black

The ring molded article supports JPI (ASME / ANSI).

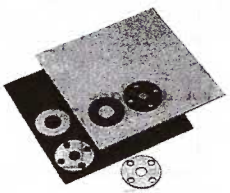
VALFLON™ (PTFE) Gaskets

These are sheet gaskets made of VALFLON™ (PTFE) with excellent chemical resistant and non-stick properties.

VALQUALON™
(PTFE-blended sheet) Gasket
Valqua® No. 7020 (For oxidizing)

In order to improve the cold flow (the creep phenomenon), which is a drawback in PTFE, these gaskets are shaped by means of a special manufacturing process where inorganic filler material is compounded.



Features:
- Excellent acid resistance.
- Heat resistance.
- Anti-cold flow properties.
- Can handle various chemicals.

Temperature	Pressure
-200 to 200°C / -328 to 392 °F	Max 4 MPa

Suitable fluids: General fluids (water, steam, oil, etc.), solvents, corrosive liquids (especially, acid liquid), liquefied gas, cryogenic fluid, flammable gas
Applications: Pipe flanges, valve bonnets, towers & tanks

The ring molded article supports JPI (ASME / ANSI).

Unit Per Sht

CODE	Thickness (mm)	CODE	Thickness (mm)
1,000 × 1,000 (mm)		1,270 × 1,270 (mm)

32	1.5	**34**	3.0

Black VALQUALON™ Gasket
Valqua® No. 7026 (For alkali)

Similar to their companion products, the No. 7020 and No. 7026 gaskets have excellent heat resistance, chemical resistance, and anti-cold flow properties.

Features:
- Excellent alkali resistance.
- Heat resistance.
- Anti-cold flow properties.
- Handling various chemical.

Temperature	Pressure
-200 to 200°C / -328 to 392°F	Max 4MPa

Suitable fluids: General fluids (water, steam, oil, etc.), solvents, corrosive liquids (especially, alkali liquid), liquefied gas, cryogenic fluid.
Applications: Pipe flanges, valve bonnets, towers & tanks.

The ring molded article supports JPI (ASME / ANSI)

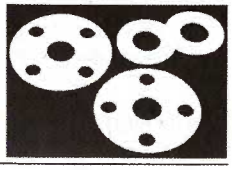
New VALFON™ Gasket
Valqua® No. 7010-EX

Made of New VALFLON™ material with improved anti-creeping performance, while maintaining the PTFE's excellent chemical resistance.



Features:
- Anti-creeping performance.
- Excellent chemical resistance.
- Heat resistance.
- Non-stick properties.

Temperature	Pressure
-50 to 150°C / -58 to 302°F	Max 1 MPa

Suitable fluids: General fluids (water, steam, oil, etc.), solvents, corrosive liquids, liquefied gas
Applications: Pipe flanges, valve bonnets, towers & tanks

The ring molded article supports JPI (ASME / ANSI).

Unit Per Sht

VALFON™ Soft Sheet
Valqua® No. 7GP61S

This highly flexible sheet has a specially made mesh construction.

Features:
- Highly flexible sheets.

- Excellent chemicals resistance.
- Heat resistance.

Temperature	Pressure
-240 to 260°C / -400 to 500°F	Max 2 MPa

Suitable fluids: General fluids (water, steam, oil, etc.), solvents, corrosive liquids
Applications: Pipe flanges, valve bonnets, towers & tanks

The ring molded article supports JPI (ASME / ANSI).

VALQUAFOIL™ (Expanded Graphite) Gaskets

Valqua® No. VF-35E

Leverages the characteristics of the pure graphite sealing material VALQUAFOIL™.

Features:
- Excellent heat resistance.
- Very small changes in physical properties under high temperatures .
- Low stress relaxation.
- Chemical resistance.

7TH
81

Temperature	Pressure
-240 to 400°C / -400 to 752°F	Max 5 MPa

Suitable fluids: General fluids (water, steam, oil, etc.), corrosive liquids, liquefied gas, cryogenic fluid
Unsuitable fluids: Not applicable to oxidizing acids such as hot concentrated sulfuric acid and concentrated nitric acid.
Applications: Pipe flanges, valve bonnets, covers, various industries

The ring molded article supports JPI (ASME / ANSI).

Unit Per Sht

- This selection guide shows typical recommended gaskets for fluids, temperatures. Further details, please consult your local suppliers.
- Products listed in this guide are used in diverse locations and for numerous types of machinery and equipment, and actual conditions of use also differ extensively. Consequently, when using these products, we recommend that you implement verification tests under the actual conditions of use.

Type #1120 CLINSIL-Top
High temperature sheet gaskets
Main material: Expanded graphite, Aramid fibers, Rubber
Applicable standards: TA Luft (Clean air) approval, tested in accordance to VDI 2440 at 250°C.

Type #1995 CLINSIL-Brown
General purpose non-asbestos sheet gaskets
Main material: Inorganic fibers, Aramid fibers, Rubber
Applicable standard: Germanischer Lloyd Type Certificate No.44 059-06HH
API-6FA Approval Fire Safety : UK/ DOT, Rule 54 Appendix D
BAM Approved (130 bar/90°C)
TA Luft Approval

Type #1834R-GR GRASEAL Vortex Gasket
Semi-metallic gaskets (Spiral wound gasket)
Spiral wound gasket with graphite filler
Good sealing performance for high temperature / high pressure applications

Clutch Facing

Wire reinforced resin molded belt impregnated with heat and wear resistant synthetic resin and press molded. Various shapes and sizes are available so please specify all the necessary details when ordering or provide your supplier with a sample.

81 17 81	Clutch facing (To be specified with further details)	Pc.

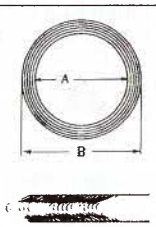
Spiral Wound Gaskets

Spirally wound gaskets are constructed of a continuous strip of preformed V shaped metal which is wound spirally with pure graphite and inorganic fibers as fillers instead of asbestos, which is excellent in gas sealing and heat resistance. The complex combination of a single metal ply and soft filler offers greater resiliency than any other metallic gasket and therefore provides good compensation for relaxation, temperature or pressure cycling, and shock or vibration.

Because there is a variety of sizes, shapes, and materials available such as copper, iron, stainless steel, monel, aluminium, and combinations of metal, pure graphite and inorganic fibers, please specify the details referring to the illustration below. A sample is acceptable for order made gaskets, but the standard shapes are illustrated below for your information.

Round Shape "R"

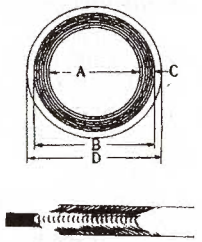
When ordering, specify PRESSURE, MATERIAL, OUTER DIAM (B), INNER DIAM (A), and THICKNESS.



(to be continued)

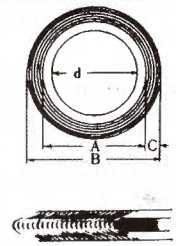
Round Shape with Outer Ring "OR"

When ordering, specify PRESSURE, MATERIAL, OUTER DIAM (D & B), INNER DIAM (A), and THICKNESS.



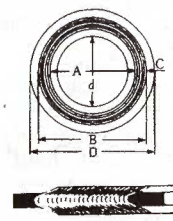
Round Shape with Inner Ring "IR"

When ordering, specify PRESSURE, MATERIAL, OUTER DIAM (B), INNER DIAM (d & A), and THICKNESS.



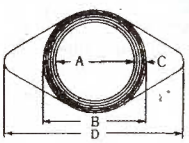
Round Shape with Inner & Outer Rings "IOR"

When ordering, specify PRESSURE, MATERIAL, OUTER DIAM (D & B), INNER DIAM (d & A), and THICKNESS.



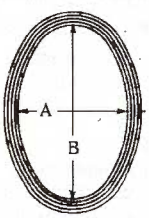
Hanger Shape

When ordering, specify PRESSURE, MATERIAL, LARGEST OUTSIDE SIZE (D), OUTER DIAM (B), INNER DIAM (A), and THICKNESS. Inner or outer ring if any:



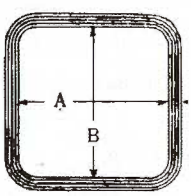
Oval Shape

When ordering, specify PRESSURE, MATERIAL, INNER & OUTER SIZES for A, INNER & OUTER SIZES for B, and THICKNESS.



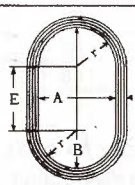
Square Shape

When ordering, specify PRESSURE, MATERIAL, INNER & OUTER SIZES for A, INNER & OUTER SIZES for B and THICKNESS.



Oblong Shape

When ordering, specify PRESSURE, MATERIAL, INNER & OUTER SIZES for A, INNER & OUTER SIZES for B, RADIUS for r, LENGTH for E, and THICKNESS.



(to be continued)

Diamond Shape

When ordering, specify PRESSURE, MATERIAL, INNER & OUTER SIZES for A, INNER & OUTER SIZES for B, RADIUS for r1 & r2, and THICKNESS.

BLACKTIGHT™
VALQUA® No. 6590 Series

These gaskets are composed of pure graphite (expanded graphite) as filler material.

Features:
- Reducing retightening frequency.
- Excellent air tightness.
- Excellent sealing properties at very low temperatures.

Temperature	Pressure
-270 to 450°C / -454 to 842°F	Max 30.0 MPa

Suitable fluids: General fluids (water, oil, etc.), high temperature & high pressure steam, liquefied gas, cryogenic fluid

How to order: 81-18-XX

Gasket, wound, spiral, SHAPE, PRESSURE, MATERIAL (INNER RING, HOOP, OUTER RING), OUTER DIAM, INNER DIAM, THICKNESS

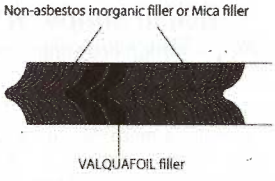
Spiral Wound Gaskets with Lines

Lined CLEANTIGHT™
VALQUA® No. 8590L Series



These gaskets are composed of VALQUAFOIL™ (expanded graphite sealing material) filler that has been wound in the middle of inorganic fillers.

Features:
- Excellent heat resistance.
- Airtight.

Temperature	Pressure
-200 to 600°C / -328 to 1,112°F	Max 30.0 MPa

Unit Per Pc.

Semi-Metallic Gaskets

For high temperatures and pressures or extremely corrosive conditions such as with liquid or gas service flanges. Made of steel, copper, aluminium, or stainless steel. Double jacket, single jacket, double shell and double jacket shell types are available. Because there are so many types it may be necessary to provide a sample with identification of the material.

81 19 01	Semi-metallic gasket, (specification required)	Pc.

For Reference

Material	Service
Low carbon steel (SS41)	530°C (986°F), 2.0 - 4.9 MPa (20 - 50 kgf/cm² or 280 - 700 psi) Steam, lube oil, light oil, organic solvents, L.P.G., air, general gas ammonia, dilute solution, alcohol
Copper (Cu)	400°C (752°F), 2.0 - 4.9 MPa (20 - 50 kgf/cm² or 280 - 700 psi) Steam, water, sea water, air, general gas, lube oil, light oil, L.P.G.
Aluminium (Al)	400°C (752°F), 2.0 - 4.9 MPa (20 - 50 kgf/cm² or 280 - 700 psi) Steam, lube oil, L.P.G. ammonia, petroleum, carbon, dioxide gas, freon, sea water, formaldehyde
Stainless steel (SUS403) (SUS304) (SUS316)	530°C (986°F), 2.0 - 4.9 MPa (20 - 50 kgf/cm² (280 - 700 psi) Steam, oil, organic solvents, lube oil, sea water, ammonia, caustic soda

VALFLON™ Envelope Gaskets

VALQUA® No. N7030 series

VALFLON™ (PTFE) Envelope Gasket using Compressed Non-Asbestos Fiber Sheet and Flexible Graphite in the core.

Feature:
- Excellent chemical resistance

Type	Temperature	Pressure (MPa)	Standard thickness (mm)
N	-100 to 150°C -148 to 302°F	Max 1.5	2.8
S	-100 to 200°C -148 to 392°F	Max 2.0	3.2
H	-100 to 260°C -148 to 500°F	Max 3.0	4.0

Suitable fluids: General fluids (water, steam, oil, etc.), solvents, corrosive liquids, liquefied gas

Applications: Pipe flanges, tanks, valve bonnets, and other equipment used in various industries

The ring molded article supports JPI (ASME / ANSI).

Type of VALFLON™ Envelope Gasket.

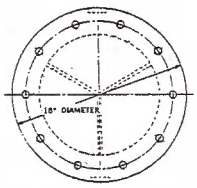
CODE	VALQUA® No.	Type
81 19 03	N7030 (N) Compressed non-asbestos fiber sheet inserted between VALFLON™ (PTFE) jacket	VALFLON™(PTFE) Jacket Compressed Non-Asbestos Fiber Sheet **N type**
81 19 04	N7030 (S) Compressed non-asbestos fiber sheet inserted between VALFLON™ (PTFE) jacket and non-asbestos felt sheet	VALFLON™(PTFE) Jacket Non-Asbestos Felt Sheet Compressed Non-Asbestos Fiber Sheet **S type**
81 19 05	N7030 (H) Thin stainless steel sheet inserted between VALFLON™ (PTFE) jacket, non-asbestos felt sheet and expanded graphite sheet	VALFLON™(PTFE) Jacket Non-Asbestos Felt Sheet Thin stainless steel sheet VALQUAFOIL™ (expanded graphite) Sheet **H type**

How to order: CODE

Gasket, envelope Valflon, VALQUA® N7030 (N) or (S) or (H), JIS, PRESSURE, NOMINAL DIAMETER

7TH 81

Hole Gaskets for Deck Opening



For deck opening holes on tankers. The available materials are non-asbestos, oil, vegetable oil, or oil-resistant rubber gaskets.

Guide of How to order:

When ordering, please specify the following points :

CODE.....	**81 20 01**
Name.....	Hole gasket for deck opening
Material	Oil resist rubber
Size O.D. × I.D. × Th.....	460 × 320 × 3.2 mm
Bolt Hole Circle×Diam×No...	390×22 mm × 10 holes

Flange Gaskets

Two types of gaskets are available.

Ring gaskets which cover from the face of the flange to the inside edge of the bolts, and full face gaskets which cover the whole face of the flange including the bolt holes. These gaskets are made of either non-asbestos oil or vegetable oil. When ordering, specify the type of gasket (ring or full face), the pipe size and material, and the bolt hole number and size if required.

Guide of How to order

CODE **81 21 01**

Name .... Flange gasket

Type ..... Full face
Pipe Size 100A
Material .....Vegetable oil

Full Face Flange Gaskets – Copper Wrapped

Non-Asbestos

Carbon Cloth Gloves

These carbon cloth gloves provide a protective barrier against fire, heat, etc. The fist is manufactured with a separated thumb. Overall length is 350 mm.

81 15 86	Gloves, carbon cloth, two divided	Pr.

Ceramic Spinning & Textile

Made of 85 % ceramic fiber and 15 % organic fiber. Ceramic fiber is made from Alumina and Silica. The maximum temperature breakdown per reinforcement used is as follows.

Reinforcement	Glass	Stainless Wire	Nickel Chrome
Temperature	400°C	800°C	1,100°C

Ceramic Fiber Blanket Sheets

Ceramic fiber blanket made from the purest of raw materials. Which are electromelted, air-brown at high speed and fiberized. Light in weight and soft to the touch, ceramic fiber blanket has various application with excellent refractory and insulating properties. Suitable for sealing, filtering, and reinforcing of various composites.

Typical Application:

Furnace linings, heat seals, packing, fire protection, noise reduction, filter material

General Properties

Max. Service Temperature	1,260°C (2,300°F)
Melting Point	1,760°C
Fiber Diameter (μm)	2.8
Fiber Length (mm)	250
Specific Gravity	2.6
Chemical Analysis	Al_2O_3 : 47.1% SiO_2 : 52.3%

Unit Per Sht

Textile Products

Ceramic Fiber Textile

VALQUA® No. 105SN (Smoke Prevention Treated Cloth)

Ceramic fiber textile is made of smoke - prevention treated ceramic fibers.

Features:
- Excellent heat resistance and fire resistance.
- Low heat conductivity and excellent heat insulation properties.
- High flexibility and excellent workability.
- Excellent chemical stability.

Color tone	Weave	Reinforcing material	Max. service temperature	Ignition loss
Liver	Plain weave	Stainless steel wire	1,260°C / 2,300°F	< 10 %

Application:
High-temperature curtains, various high-temperature heat insulating materials, protectors against weld sparks and the like

Non-asbestos Brake Linings

High quality lining made of special non asbestos heat-resistant tightly woven fabric, brass wire reinforced, impregnated with oil-resistant, wear-proof and heat resistant synthetic resin, finished to prescribed size of roll, generally from 5 to 25 mm thick, 25 mm to 300 mm width and 20 mtr long.

Application :
For large capacity / floating winch / crane, windlass, heavy industrial machines, dredger.

Asbestos Free #1350-WS (from FB Industrial)
A tough-heavy duty asbestos zero material with a high degree of flexibility & long life. Developed for use of resistance to heat, oil, abrasion and withdurability, and has stable coefficient of friction for a long period.

Asbestos Free #1350-HB (from FB Industrial)
Grinded the both surface of #1350-WS, and impregnated again with heat-resistance special synthetic resin binder, and then finished to be dried up completely. Applicable for wide range of breaking and keeping for rotating objection.

Asbestos Free Uni Tex No.8000 (from Wakasugi)
Service: For heavy duty brake lining such as windlass and winches.
Material: Woven brake lining with recent non-asbestos fibres and brass wire, and treated with special chemicals.

81 16 76	Brake lining, non-asbestos, SIZE, THICKNESS × WIDTH × LENGTH	Mtr

Metal-filled Epoxies

Loctite® Aluminium Liquid

Aluminium filled, pourable and self-leveling, steel-filled epoxy. Ideal for casting or making molds. Works well to fill hard-to-reach areas. Can be machined when cured. Sets in 25 minutes. Typical applications include filling or leveling equipment, pouring molds, parts, and fixtures, making aluminium forming dies, casting aluminium parts.

CODE	Contents	Unit
81 21 76	1 lb	Set

Loctite® PC7254 (3475 Aluminum Putty)

Two-part epoxy system heavily reinforced with aluminium powder. Ideal for repairing aluminium parts under typical dry service temperatures to +93°C (+200°F), or where aluminium finish is desired. Use in repairing aluminium castings, repairing worn aluminium parts, making models and jigs for holding odd shaped parts, making aluminium dies.

CODE	Contents	Unit
81 21 77	1 lb	Set

Loctite® EA3476 (Stainless Steel Putty)

Stainless steel filled two-part epoxy. Repairs stainless steel parts on applications where a stainless steel finish is desired under typical dry service temperatures to +107°C (+225°F). Once hardened it can be machined, drilled, tapped or filed just like the original metal. Typical applications are renewing stainless steel pumps, rebuilding stainless steel shafts, resurfacing stainless steel equipment, repairing stainless steel castings, making stainless steel molds.

CODE	Contents	Unit
81 21 78	1 lb	Set

Loctite® EA3472 (3472 Steel Liquid)

Two-part pourable epoxy system heavily reinforced with steel powder for casting parts or filling voids under typical dry service temperatures to +107°C (+225°F). Once hardened it can be machined, drilled, tapped or filled just like steel. Rebuilds worn parts fast, reduces downtime, high steel content-cures to a steel-like finish, superior adhesion-form a solid bond to steel, cast iron, stainless steel, concrete, and clean and abraded bronze, copper, and aluminium.

CODE	Contents	Colour	Unit
81 21 79	1 lb	Grey	Set
81 21 80	4 lb		

Loctite® EA3471 (3471 Steel Putty)

Steel reinforced, two-part epoxy that cures to a metal-like finish and can be machined, drilled, tapped or filed under typical dry service temperatures to +107°C (+225°F). Typical applications are sealing cracked castings, tanks, vessels, and valves, patching non-structural defects in steel castings, making models and jigs for holding odds shaped parts, making metal dies, resurfacing worn air seals, and filling cavitated areas.

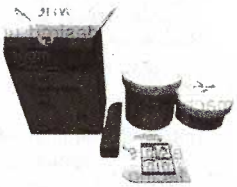
CODE	Contents	Colour	Unit
81 21 81	1 lb	Grey	Set
81 21 82	4 lb		

Loctite® PC7290 (3474 Wear Resistant Putty)

Ceramic fibers give this trowelable putty excellent wear and abrasion resistant properties under typical dry service temperature to +107°C (+225°F). Provides smooth, low friction finish for equipment exposed to wear, erosion, and cavitation. Typical applications are filling cavitation, providing protective coating in or on: pipes, pumps, elbows, transitions, butterfly valves, deflection plates, turbine blades, and tanks.

CODE	Contents	Colour	Unit
81 21 83	1 lb	Grey	Set
81 21 84	3 lb		

Loctite® (3478 Superior Metal)



Non-rusting, ferro-silicone-filled epoxy. Extremely high compressive strength and wear resistance. Ideal for rebuilding worn surfaces exposed to harsh environments. Can be machined, drilled and tapped in 6-8 hours. For final finish cuts, let the product cure for 24 hours and use carbide tooling. Spreadable putty. Sets in 20 minutes.

81

Loctite® (3463 Metal Magic Steel)

Steel epoxy in stick form. Cut off a section, knead and apply to leaking pipes or damaged equipment. Cures in 10 minutes. National Science Foundation (NSF) approved, standard 61.

CODE	Contents	Colour	Unit
81 21 90	50 grm	Grey	Pc.
81 21 91	113 grm		

Loctite® EA9480 (Underwater Repair Epoxy)

This putty-like materials is ideal for plumbing, irrigation, and marine applications because it is unaffected by chlorinated or salt water. Ideally suited for underwater repairs. Sets in 15 minutes.

CODE	Contents	Unit
81 21 93	113 grm	Pc.

Loctite® EA3473 (3473 Fast Set Steel Putty)

Set in 3 minutes, steel reinforced, two-part epoxy designed for making fast and curable repairs to a variety of metals. This product is typically used in applications with maximum temperature +93°C (200°F). Typical applications include fuel and gas tank holes, stripped threads, cracked battery cases, leaking storage tanks, and leaks on pipes and elbows.

Loctite® 5070 Pipe Repair Kits

No tools required, cures in 30 minutes. Easy-to-use pipe repair kit. Use for temporary and medium term repair of leaking pipes, and reinforcement of weak areas. Urethane impregnated fiberglass tape, activated by water, for reliable, temporary repairs of metal, plastic, and composite pipes. Kit contains Fixmaster Metal Magic Steel epoxy stick, urethane impregnated fiberglass tape, and gloves. Cures in 30 minutes. The maximum temperature resistance is +121°C(+250°F). Yellow color is available. Typical application include sealing cracked castings, tanks, vessels, valves and pipes. It also repairs pipe joints and reinforces tanks, vessels, valves, joints and elbows.

Small Pipe Repair Kits

Designed to put all products required to carry out emergency repairs to leaking pipework. By utilizing Pipe Repair Bandage, immediate and cost effective repairs can be carried out, and surface preparation is at a minimum due to the surface tolerant characteristics of Bandage. The end result can offer long term protection at a working temperature of 270°C and at pressures ranging from 10 bar (150psi) through to 27 bar (400psi) if used in conjunction with "Stick Grade Metal(Code 812202) and a double wrap.

Contents :

5 units	"Pipe Repair Bandage" W50mm x L1.8mtr
1 unit	"Stick Grade Metal"
5 pairs	Disposable gloves
1 vol	Mixing and application instructions packaged in a robust plastic container (which serves as a water bucket)

81 23 67	ThistleBond Small Pipe Repair Kit UPS19500 T	Set

ThistleBond SG Stick Grade Metal

A specially packaged rapid curing synthetic metal repair compound for onsite repairs to metal components such as leaking pipes, tanks, ducts, radiators, etc.

81 22 02	ThistleBond SG Stick Grade Metal, 125 grm × 10, UPS19060	Pc.

ThistleBond EG Metal Repair Paste

A high performance multi-purpose synthetic metal repair compound specially developed for metal repairs requiring excellent mechanical strength combined with easy machining properties.

(to be continued)

81 22 11	ThistleBond EG Metal Repair Paste, 1 kgs / Unit UPS 105	Set

ThistleBond RH Standard Resin & Hardener

A high performance, solvent free epoxy system designed for onsite repairs to metal, wood, glass and synthetic materials. Excellent adhesion to both blast cleaned and mechanically prepared surfaces, excellent corrosion resistance even under seawater, unaffected by short term contact with industrial chemicals. Suitable for use up to 100°C (212°F) dry heat.

81 22 16	ThistleBond RH Standard Resin & Hardener, 225 grm x 10, UPS19000	Set

ThistleBond Sealer Filler

Special non-asbestos filler in powder form for addition to the resin mix after the initial mixing has taken place. The resultant sealer filler mix has two very useful properties. The mix is very thixotropic and can therefore be applied to vertical areas. The mix can be applied to operate at temperatures up to 180°C (356°F). When it is applied a pre-coat, prior to carrying out a repair, it will help to insulate the resin laminate from the operating temperature of the parent body repair.

81 22 20	ThistleBond Sealer Filler, 50 grm, UPS 19043	Bag

ThistleBond GT Glass Tapes

A high performance unique braided Glass Fibre Tape that, when used in conjunction with the UPS 19000 RH (Code 812216) offers the ultimate in both Leak Sealing and Pipe Protection.

81 22 23	ThistleBond GT Glass Tape, 50 mm x 50 mtr, UPS 19007	Roll
81 22 25	ThistleBond GT Glass Tape, 100 mm x 50 mtr, UPS 19009	"

ThistleBond A & B Cement

A high performance, two pack, solvent free epoxy repair system for use on metallic surfaces. Ideal for application where only minimal surface preparation can be carried out and is usually used in conjunction with RH Standard Resin & Hardener (Code 812216). Suitable for rebuilding corrosion pitting on metallic structures and in particular, as a fairing compound on pipework prior to wrapping with the RH Pipe Repair System.

81 22 30	ThistleBond A & B Cement, 200 grm UPS 19002	Set
81 22 31	ThistleBond A & B Cement, 1 kgs UPS 19003	"

ThistleBond Therma-Tech LG

A single component Water based Encapsulation System, designed to protect all types of Thermal Insulation materials and dangerous asbestos Fibre against surface Spread of Flame.

81 22 32	ThistleBond Therma-Tech LG, 20 Litre TPC 625	Set

Devcon Products

Precision Repair Epoxy

Devcon Titanium Putty

Titanium-reinforced epoxy putty for making repairs that can be precision machined. Provides excellent temperature resistance, high compressive strength and unmatched resistance to a broad range of chemicals and acids.

- Resistance to chemicals and most acids, bases, solvents, and alkalis.
- Temperature resistance to 350°F.
- High compressive strength (18,800 psi).

81 22 41	Devcon Titanium putty, 1 lb / unit	Set
42	Devcon Titanium putty, 2 lb / unit	"

Devcon HR SUPER 3000

Provides excellent temperature resistance with continuous service temperatures (200-220°C) and maximum temperature (300°C). Enhances strength when used with enclosed glass tape under high temperature and pressures. Ideal for emergency repairs as cures in a few minutes at over 100°C. Trowelable and bonds to most metals.

81 22 43	Devcon HR Super 3000, 500 grm / unit	Set

Emergency Repair Epoxy

Devcon Underwater Repair Putty (UW)

For repairing, patching and rebuilding equipment in habitually wet environments, even underwater.

- Bonds to steel, iron, aluminium, brass, bronze, concrete, wood, and plastics.
- Penetrates moisture; eliminates the need to dry substrates thoroughly before repairs.
- Cures at temperatures down to 40°F.

81 22 46	Devcon Underwater repair putty UW, 1 lb/unit	Set

Rubber Repair and Casting Urethanes

Devcon Flexane 80 Putty or Liquid

Putty:
Trowelable 100 % solid urethane compound. Easy to mix and cures to tough, medium-hard rubber for a broad range of lining and protection applications. Withstands continuous service temperatures up to 180°F (dry environments) and 120°F (wet environments). Bonds to metal, concrete, rubber, wood and fiberglass.

Liquid:
Castable, non-shrinking, medium-viscosity urethane compound for making rugged, flexible molds, forming dies, cast parts and non-scratching holding fixtures, as well as abrasion and noise-resistant linings and encapsulating parts. Mixes and pours easily and cures at room temperature to a semi-rigid rubber material.

- Mixes easily and trowels on smoothly.
- Cures to a tough medium-hard rubber (Shore A 87).
- Service temperatures to 180°F dry / 120°F wet.
- Flexane Primers are recommended for maximum adhesion to metal, rubber, and concrete surfaces.

81 22 48	Devcon Flexane 80 putty 1 lb / unit	Set
49	Devcon Flexane 80 Liquid 1 lb / unit	"

General Repair Epoxies

Devcon Plastic Steel Putty (A)

Metal filled epoxy putty used for routine maintenance, production, and tooling applications.

Bonds to most metal, concrete and some plastics and is ideal for patching and repairing areas where welding would be undesirable or impossible.

- Bonds to most metals, concrete, and some plastics.
- Cures at room temperature.
- Can be drilled, tapped, machine, water, and chemicals.
- Ideal for patching and repairing areas where welding or brazing would be undesirable or impossible.

81 22 51	Devcon Plastic steel A, 1 lb/unit	Set
52	Devcon Plastic steel A, 4 lb/unit	"

Devcon Plastic Steel Liquid (B)

Steel-filled liquid epoxy with the performance properties of Plastic Steel Putty (A). Can be cast over models for accurate detail reproduction when making holding fixtures, light-gauge forming dies and molds. Hardens in about an hour.

- Hardens in about an hour.
- High compressive strength.
- Machinable to close tolerances.
- Low viscosity makes it an ideal leveling compound for machinery and equipment.

81 22 56	Devcon Plastic steel B, 1 lb/unit	Set
81 22 57	Devcon Plastic steel B, 4 lb/unit	"

Devcon Plastic Steel 5-minute Putty (SF)

Fast-curing, steel-filled epoxy for dependable emergency repairs in less than 1 hour. Cures to a tough, steel-filled material that can be machined, drilled, tapped or sanded.

- Cure in less than 1 hour.
- Tough, steel-filled material can be machined, drilled, tapped, or sanded.

81 22 62	Devcon Plastic steel SF, 1 lb/unit	Set

Devcon Aluminium Putty (F)

Aluminium-filled epoxy putty for dependable non-rusting repairs to aluminium castings, machinery and equipment. Bonds to aluminium and other metals. Can be machined, drilled or tapped.

- Repairs air conditioning system components.
- Excellent resistance to chlorofluorocarbons.
- Bonds to aluminum and many other metals.
- Fills porosity in aluminum castings.
- Can be machined, drilled or tapped using conventional metalworking tools.

81 22 66	Devcon Aluminium putty F, 1 lb/unit	Set
67	Devcon Aluminium putty F, 3 lb/unit	"

Devcon Aluminium Liquid (F-2)

Aluminium-filled pourable epoxy for molds, patterns, holding fixtures and cosmetic casting repairs. Cures just over 1 hour.

- Can be machined, drilled, or tapped.
- Low viscosity provides accurate reproduction of mold details and of delicate or intricate parts.

81 22 71	Devcon Aluminium Liquid F-2, 1 lb/unit	Set

Devcon Wear Resistant Putty (WR)

High wear-resistant, self-lubricating compound for repairs requiring smooth surfaces against sliding wear.

Nonshrinking liquid used for building up metal shafts and pumps, making bearings and general repairs. Also ideal for making metal-forming dies and duplicating masters. Cures to a smooth surface.

- Bonds to steel, iron, aluminium, ceramic, concrete, brass, and some plastics.
- Contains wear-resistant fillers for low-friction applications.

81 22 81	Devcon Wear Resistant WR, 500 g / unit	Set

Devcon Wear Resistant Putty (WR-2)

Smooth, non-rusting, all purpose epoxy putty for repairs requiring low friction finishes, excellent wear resistance and protection from bi-metallic corrosion.

Bonds to steel, iron, aluminium, ceramics, concrete, brass, and some plastics.

- Bonds to steel, iron, aluminium, ceramic, concrete, brass, and some plastics.
- Contains wear-resistant fillers for low-friction applications.

81 22 86	Devcon Wear Resistant WR-2, 1 lb/unit	Set

Devcon Bronze Putty (BR)

Bronze-filled epoxy putty for repairing bronze and brass bushings, shafts, castings and equipment parts. Ideal for repairing and rebuilding areas where brazing would be undesirable or impossible.

- Repairs and rebuilds areas where brazing would be undesirable or impossible.
- Bonds securely to bronze alloys, brass, copper and ferrous metals.

81 22 90	Devcon Bronze putty BR, 1 lb/ unit	Set

Devcon Stainless Steel Putty (ST)

Stainless steel-filled epoxy putty, ideal for patching, repairing and rebuilding stainless steel food processing equipment. It is non-rusting and bonds to ferrous and non-ferrous metals.

- Bonds to ferrous and nonferrous metals.
- Nonrusting.
- NSF certified for potable water applications and acceptable for use in meat and poultry plants.

81 22 92	Devcon Stainless steel putty ST, 1 lb/unit	Set

Devcon Magic Bond
(cures in 12 hours at 25°C)

Devcon Fasstik
(shows 85% of strength in 15 min. at 25°C)

Ideal for emergency repairs. Easy to carry and use: cut as you need, mix with fingers and patch.

For Magic Bond
- For plumbing repairs and marine use.
- Cures rock-hard in 30-40 minutes, seals permanently.
- Cure even under water.

For Fasstik
- NSF certified for use in potable water applications.

81 22 93	Devcon Magic Bond, 114 g / unit	Pc.
94	Devcon New Fasstik, 114 g / unit	"

Devcon Zip Patch

Easy-to-use waterproof adhesive patch kit. Hardens in minutes at room temperature. Excellent adhesion to iron, steel, stainless steel, titanium, FRP, aluminium, wood, ceramics, composites, acrylics, PVC, and other plastics. Makes permanent, waterproof field repairs to pipes, tanks, and containers.

Contents; Glass fibre patch 100 mm x 230 mm, Activator spray, Spatula, Protective gloves

81 22 98	Devcon Zip Patch	Kit

Cordobond Products

Cordobond
Strong-Back Resin & Activator

Liquids to be mixed together for use with glass cloth, glass mat and glass tape. The mixture hardens into a rigid mass that bonds with high tenacity to almost any surface to produce a tight seal which will not dissolve in water, oil or most chemicals and will resist elevated temperatures and pressures.

81 23 01	Cordobond Strong-back resin & activator, 453 grm / Unit	Set
02	-"- 906 "	"

Cordobond
Strong-Back Putty (Red)

A tough, dense compound which sets up hard and possesses high adhesive qualities. Used for plugging large holes before reinforcement with activated Cordobond strong-back resin and fiberglass cloth.

81 23 06	Cordobond Strong-back putty 226 grm / Unit	Set

Cordobond
Strong-Back Sealer

Sticky material for sealing small holes, cracks and leaks around tank and pipe fittings where pressures are low. Can be applied by trowel or putty knife.

81 23 08	Cordobond Strong-back sealer, 113 grm / Unit	Set

Cordobond
Strong-Back Steel Putty

Combination of steel packed resin and activator for repairing cracks, holes, crevices, defects, etc. in steel and other metals. Steel putty can be drilled, threaded, machined, filed or hack-sawed.

81 23 10	Cordobond Strong-back steel putty, 453 grm / Unit	Set

Cordobond
Strong-Back Leveling Compounds (Yellow)

Trowel applied packed resin and activator used for building up corroded and pitted areas to a uniform surface.

81 23 12	Cordobond Strong-back leveling compound, 453 grm / Unit	Set

Cordobond Glass Sheets

Glass tape, cloth and reinforced mat. The tape and cloth are made of woven glass yarn. Provides the main strength

of a patch when saturated with activated Cordobond strong-back resin. The mat is made of fibers which are felted together and reinforced. Due to its absorbing and reinforcing qualities, glass mat is used to speed up the curing and provides additional strength.

81 23 21	Cordobond glass cloth, 1,000 × 1,000 mm	Sht

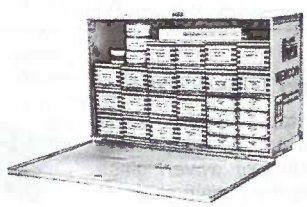
Wencon Products

Wencon Repair Kit for Marine

The mechanical first-aid kit for leaking pipes and tanks, for corroded cooler end covers, pump casings, valves, sea water filters, etc. Wencon repair kits are available in different sizes, depending on size and age of the vessel.

Covers most aspects of emergency repairs and long lasting maintenance. Suitable for all ships where repairs and maintenance are carried out frequently. Please select a suitable kit according to your vessel's size and age from the following range of kits.



Product No.	The 4 standard repair kit contains:	Kit 1 (812341)	Kit 2 (812331)	Kit 3 (812332)	Kit 4 (812333)	Tanker Kit (812326)

Name of Mfr. Wencon Aps

Wencon Exhaust Repair Kit

One-component cold weld product for repair of cracks and leaks in exhaust systems exposed to high temperatures. The compound resist temperatures up to 1,300°C (2,400°F).

The kit contains;

2 × 250 grm	Exhaust repair compound
1 pc	Metal mesh for reinforcement purposes
1 pc	Spatula
1 pc	Application data sheet

81 23 40	Wencon exhaust repair kit, 2 × 250 grm product no. 1070	Set

Wencon Cream / Rapid

Repairing and refurbishing metal structures being deteriorated through corrosion, bimetallic corrosion or in other ways. Especially used for corroded tanks, pump housings, valves, filter housing and strainers, tubes, heat exchanger end covers, flange faces. Roller bearing seats, alignment of bushings, shafts, hydraulic rams, key ways, etc. "Cream" and "Rapid" are both paste consistency and easy applied even to vertical surfaces, and "Cream" is for slow curing and "Rapid" is quick curing.

CODE	Description	Products No.	Contents	Unit

81 23 43	Wencon rapid	1005	8 x 125 grm	Set
47	Wencon rapid	1000	1 kgs	Set

Wencon UW Cream
Wet Surface

A two component cream, to be applied on wet surfaces or under water. The UW Cream is excellent for filling up holes, dents and rebuilding of surfaces which, due to high humidity, have to be done in wet conditions. Typical applications are corroded hulls and all underwater parts of ships and structures, tanks, pipes, flange faces, etc. Is also excellent for filling up cavitation damages on hulls and rudders. Wencon UW Cream has a strong adhesion to all metal surfaces.

81 23 34	Wencon UW cream, wet surface, #1014, 0.5 kgs	Can

Wencon Coating

For protecting your machine parts against bi-metallic corrosion, erosion / corrosion, impingement, entrainment, etc. The treatment will improve the flow characteristics in pumps and valves. Typical applications are coating of surfaces rebuild after deterioration, protection of tanks, pumps, valves, wet liners, cooler end covers etc. against corrosion and bi-metallic corrosion as well as a variety of small and large repair and maintenance jobs. Wencon Coating can be applied by spatula and is a double coat system in white and blue.

CODE	Description	Products No.	Contents	Unit
81 23 37	Wencon coating white	1020	0.5 kgs	Set
38	Wencon coating blue	1030	"	"

Wencon Hi-Temp

The high performance coating product for repair and protection in high temperature and aggressive environments. The Hi-Temp offers temperature up to 160° C, provided the media is not boiling. Typical applications are coating of surfaces rebuild after deterioration including repair of lining on inert gas systems, fresh water generators, hot pipes and heating coils, protection of tanks, pumps and valves against chemical and mechanical aggression, corrosion and bi-metallic corrosion. Wencon Hi-Temp is supplied in a double coat system in yellow and green.

CODE	Description	Products No.	Contents	Unit
81 23 45	Wencon hi-temp yellow	1050	0.5 kgs	Set
46	Wencon hi-temp green	1060	"	"

Wencon UW Coating
Wet Surface

Excellent liquid coating for applying on wet surfaces or under water, with a very good adhesion to metal surfaces. Typical applications are coatings of steel surfaces rebuild with Wencon UW Cream, and coatings under water - like ships hulls and/or other submerged structures, tanks, pipes etc. Examples of repairs under extreme conditions could be: on-site repair of sea-water filter housings, unable to achieve a dry surface and coating of scratched painting on hulls in splash-zones and under water. Wencon UW Coating is a double coat system and is supplied in two different colours, orange and brown.

81 23 36	Wencon UW Coating, wet surface, orange #1035, 0,5 kgs	Set
81 23 27	Wencon UW Coating, wet surface, brown, #1036, 0,5 kgs	"

WENCON Bio Cleaner

A water based alkaline degreaser, used for cleaning purposes prior to application of Wencon products, in order to ensure best possible adhesion. An environmentally friendly product and is classified as Non Dangerous Goods. Applied on wet and dry surfaces. For application on wet surface, Wencon UW Coating is needed as a primer before application of any further products. Supplied with a separate spray, which is set for foam spray when delivered. Recommend using foam spray, due to the efficiency.

81 25 97	Wencon Bio Cleaner, spray, #1104, 0.75 ltr/btl	Btl

Wencon Pipe Tape

A fast curing pipe repair bandage especially formulated to make quick and effective repairs of cracks, leaks, fractures, and corrosion porosity in piping carrying water, oil, steam, most gases and even solvents. Wencon Pipe Tape has good pressure, temperature and chemical resistance. Available in 3 sizes.

81 23 28	Wencon pipe tape, 2 unit pack 10 cm x 350 cm	Set
44	Wencon pipe tape, 5 unit pack 5 cm x 150 cm	"
48	Wencon pipe tape, 4 unit pack 5 cm x 350 cm	"

Wencon Putty

The quick curing, ready to use, mouldable, epoxy repair paste. This multipurpose epoxy paste is ideal for a wide range of emergency repairs where an ultra quick curing and mouldable compound is required. Typical applications are patching sealing and filling of cracks, leakages and holes in pipes, on flanges, in tanks etc. Used in combination with Wencon Pipe Tape.

81 23 42	Wencon putty , 8 x 125 grm, product no. 1040	Set
81 23 29	Wencon putty , 4 x 125 grm, product no. 1042	"

Wencon Cleaner

Trichlorethylene based non-flammable degreasing agent, which is used for cleaning purposes prior to application of the Wencon products.

81 23 49	Wencon cleaner, 0.5 ltr	Can

Wencon Release Agent

Used in applications where you want to prevent adhesion between Wencon and the substrate. The release agent is applied in a thin layer and left for drying in ten minutes. Remove excess material using a cloth.

81 23 50	Wencon release agent, 50 grm	Pc.

7TH 81

Wencon Ceramic Cream

The epoxy compound for repair and rebuilding of deteriorated metal parts, exposed to excessive wear. Typical applications are corroded tanks, pump housings, impellers, valves, pipes, flange faces, roller bearing seats, worn shafts, hydraulic rams and heat exchangers. Wencon Ceramic Cream is also excellent as a filling compound.

Wencon Ceramic Cream can be machined, drilled and worked like metal after curing. The compound has a paste consistency and is easily applied by spatula also to vertical surfaces.

81 25 92	Wencon ceramic cream, No.1016, 1 kgs	Set

Wencon Ceramic Coating

The versatile and cost effective two-component coating product for general repair, maintenance and protection of surfaces, exposed to excessive wear. Typical applications are coating of surfaces rebuild after deterioration, protection of tanks, pumps, valves, wet liners, cooler end covers etc. against wear, corrosion and bi-metallic corrosion as well as a variety of small and large repair and maintenance jobs.

Wencon Ceramic Coating is a double coat system and is consequently supplied in two different colours, light grey and light green. The product is liquid and is applied by brush, roller or spatula.

81 25 93	Wencon ceramic coating, Light Grey, No.1017, 0.5 kgs	Set
94	Wencon ceramic coating, Light Green, No.1018, 0.5 kgs	"

Wencon Application Tools

Wencon Application Tools are quality products regularly used in connection with mixing and application of Wencon repair products.

The kit contains:

- 4 spatulas for application of compounds and coatings.
- 4 brushes for application of coatings.
- 4 mixing knives for mixing of Wencon two component.
- 1 pair of scissors for cutting Wencon Reinforcement Tape, Pipe Tape and other soft material.
- 4 pairs of nitrile-gloves.

81 25 95	Wencon application tools, No.2805	Set

Wencon Fixation Tools

Used for repair of cracks and corrosion in tanks, leaking pittings and welding seams. The Fixation Tools help to support and secure Wencon products to the damaged part.

81 25 96	Wencon Fixation Tools, No.2808	Set

Belzona Polymerics

1111 Super Metal

The general purpose engineering compound for fully machinable repairs.

Belzona 1111 Super Metal has outstanding mechanical strength combined with excellent chemical resistance. The unique properties of 1111 Super Metal make it ideal for application to hydraulic rams, worn shafts, oversize housings, worn keyways, damaged engine blocks, distorted flanges, and also to repair pinholes and fractures in pipe work, particularly on T-pieces and elbows. Repairs tracked and eroded flange faces. Each unit contains basic resin and hardener.

Suitable for contact with potable water as it is certified to NSF/ANSI Standard 61 and satisfies the UK Drinking Water Inspectorate.

Water Activated Tapes
for Pipe Repair

Designed and recommended for stopping leaks in pipe which may occur due to corrosion or other reasons. Composed of a quality knitted fiberglass cloth coated with a special polyurethane resin which is activated by a 5 second immersion in water. Once activated by water the tape will transform from a wet adhesive into a rigid plastic state in minutes. Bonds to most common plastic or metallic pipe materials such as steel, iron, copper, PVC, fiberglass, and others. Recommended for leaks not exceeding 1/8" in diameter and pipe size 2" in diameter. May be used with good results on pipe with a temperature range from –29°C to 121°C. Each roll of products is individually packaged with gloves for handling.

Unit Per Rls

81 23 65	7.5 cm × 1.2 mtr	160
81 23 63	10 cm × 1.2 mtr	307

Water Activated Fiberglass Tapes
for Pipe Repair
Syntho-Glass

A fiberglass pre-impregnated composite that is activated by salt or freshwater. It is ready to use and does not require any measuring or mixing. This system enables you to repair and reinforce virtually any diameter pipe in minutes. It is excellent on copper, steel, stainless steel, PVC, FRP, clay, concrete, rubber, and more. It is safe to use, nontoxic, noncombustible, and odorless.

Mechanical Properties

Tensile Strength	ASTM D 638 Type 1-8 ply	36,448 psi (2,513.6 bar)
Flexural Strength	ASTM D 790 Type 1-8 ply	26,100 psi (1,800 bar)

High Pressure Leak Sealant Kits
STOPIT® HP™

A multi-component epoxy composite repair system designed for high-pressure sealing applications with working pressures up to 2,000 PSI (140 kg/cm²) and operating temperatures up to 165°F (74°C). The repair system provides a built in 5:1 safety margin.

Repair applications can be made regardless of pipe orientation and results in a durable coating approximately 5mm thick. The repair epoxy system has a working time of approximately 8 – 10 minutes and will allow return to service in as little as 4 hours.

Supplied in a kit with all the necessary components for field installation*. Standard kits for repair of pipes up to 4" in diameter are available; non-standard kits can be custom made to order with short delivery times.

* Installation requires no special training and involves minimal surface preparation.

Physical Properties of Sealant:

Shelf Life:	6 months from date of purchase when stored at 40° to 83°F (5° to 28°C).
Colour:	Component 1-Clear/Component 2- Straw/Fiber-yellow.
Mixing Ratio:	As supplied, dual cartridge dispenser.
Pot Life:	8 min. @72°F (22°C), after mixing for films less than 1/2" thick.
Glass Transition Temperature:	216°F (102°C), cured and annealed.
Cure Time:	- 4 hour @72°F (22°C) at 1/8" film thickness.
Sealant Viscosity:	Gel-like before cure.

Kit Contents

1 x Pre-filled dispensing cartridge(s) 2 x Static mixers with retainer 1 x Composite fabrics 1 x Instruction manual	1 x Mixing tray 1 x Safety gloves 1 x Clean-up supplies

Adjustable Pipe Repair Clamps

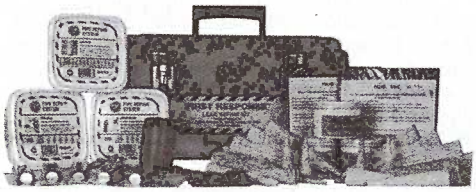
Adjustable Type 301 Stainless Steel repair clamps repair splits, pin holes or punctures in pipe or tubing. This handy tool is uniquely faced with expanded PTFE which is the most effective seal for all common chemicals and is food grade acceptable. The clamp conforms to most irregular surfaces and controls most pressures with simple hand-tightening. Adjustable to fit pipe and tube sizes from 1/2" to 6". Combine clamps to fit larger sizes. 10 clamps per case.

81 23 66	Stop-It® Pipe Repair Clamp for pipe size 1/2" to 6", 10 clamps per case	Case

Leak Repair Kits

InduMar - First Response™

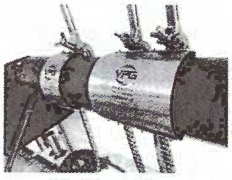
Quickly repair most common leaks in pipes, tanks and drums with a variety of sealing devices and materials. Designed with first responders in mind. The kit has the tools to respond to pipe leaks and surface holes of all shapes, as well as cracks and gashes - includes the following:



No.	Items	Q'ty
1.	Stop It® Pipe Repair System – small/medium/large	1
2.	Epoxy Fix Stix™	5
3.	Assorted wooden plugs	18
4.	Rubber hammer	1
5.	Plug rugs "Plug-N-Dike"	2
6.	Plug patties "Plug-N-Dike"	3
7.	Lead wool filler pack	1
8.	Hot/cold hose repair tape	1

81 23 68	Leak repair kit, First Response™	Set

Emergency Pipe Repair Systems



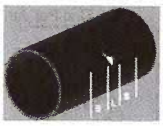
The fastest and easiest way to temporarily repair pipe leaks and bursts. Taking less than 60 seconds to install and featuring a fully self-contained design, which does not require the use of tools. Made from 316 stainless steel and the system features a Nitrile lip-seal, making it suitable for water, gas and most petroleum liquids.

Designed under contract by the Australian Government Defence science and Technology Organisation (DSTO) for use by the Royal Australian Navy, and is suited to a wide range of commercial uses, including: marine, oil and gas, mining, emergency services and plumbing applications.

Selecting the correct clamp length;

When repairing a damaged pipe, it is important to ensure sufficient rubber gasket contact between the edge of the damaged area (refer to "L") and the edge of the clamp. The table below provides a guide to clamp selection, where "B" is the minimum recommended sealing width between the damaged area (L=width) and the end of the clamp.

Nom. Diameter (DN)	Min. Seal Length B (mm)
38 mm - 930 mm	15 mm



Minimum Recommended Clamp Length = L + 2B
Example; If the damaged area measures 20 mm, then a 60 mm Single Clamp should be used.
(L = 20; 20 + [2 x 15] = 50 mm)

How to order: CODE

Name of Mfr. : Valley Precise Global Pty Ltd.

Metal Repair and Protection Systems

The polymer composites provide the ultimate solution for erosion, corrosion, wear or chemical attack which create problems in fluid flow systems.

The systems exhibit outstanding compressive and flexural strengths as well as phenomenal adhesion, producing the most advanced polymer claddings available for rebuilding, resurfacing and protecting virtually all fluid flow components.

Metalclad Duralloy

Multipurpose paste material, can be drilled, tapped, turned on a lathe, sanded and polished. Can be used to repair worn shafts, cracked casings and engine blocks, etc. Trowelable, requires no heat.

81 23 71	Metalclad Duralloy, 1 kgs	Set
72	" 2 kgs	

Metalclad Speedalloy

The leak stopper paste material. Fast, easy, non-slump ; can be used to repair just about any leak in minutes. Bonds to virtually any rigid surface.

81 23 75	Metalclad Speedalloy, 167 grm x 10's	Set

Metalclad Ceramalloy CP+

Outstanding wear resistant paste material. Trowelable system for repairing and rebuilding metal damaged by erosion and corrosion: pumps, valves, heat exchangers, etc.

81 23 77	Metalclad Ceramalloy CP+, 1 kgs	Set
78	" , 2 kgs	"

Metalclad Ceramalloy CL+

The ultimate resurfacing system for protecting fluid flow equipment. Brushable, self-leveling, castable thixotropic liquid for pumps, valves, water boxes, tube sheets, tanks, propellers, etc. Two colours (blue and grey) are provided.

81 23 81	Metalclad Ceramalloy CL+, Blue,1 kgs	Set
82	" Grey, 1 kgs	"

Flexiclad Dura Tough

These systems provide exceptional protection to equipment prone to cavitation attack and subsequent damage. Also ideal for creating or repairing flexible seals on machinery and equipment such as on heat exchangers, pumps, valves and piping systems.

Dura Tough DP: Epoxy urethane paste
Dura Tough DL: Thixotropic liquid, blue or green

Chemclad XC

Epoxy system liquid resistant to a very wide variety of organic and inorganic acids, alcohol, alkalis, ester, ether, hydrocarbon, ketone, oil, salt, etc. Can be easily and safely applied by brush, roller, squeegee or airless spray. Two colours (light grey and dark grey) are provided.

81 23 91	Chemclad XC, light grey, 5 kgs	Set
92	" , dark grey, 5 kgs	"

Eneseal HR

To provide maintenance and facilities engineers to protect insulation from water and oil impregnation, impact and chemical attack ; to seal and protect concrete containment walls ; to provide a heat refractive surface to reduce the heat envelope around the equipment and structures -–especially metal decks, increasing energy efficiency ; and to waterproof just about any porous surface. Can be easily and safely applied by roller, brush or spray.

81 23 95	Eneseal HR, 15 ltr	Can

Ultrametal Ceramic Steel Putty

Ultrametal ceramic steel is suitable for extreme loads when maintaining industries and crafts. The highly wear resistant polymer provides an extended pot life in combination with a shortened curing time (< 2 hours) which allows best results on medium as well as large-scale repairs e.g. pipe coatings, wear protection coatings, pump repairs, slides, shafts etc.

Product Benefits:
- Increased wear resistance.
- High chemical resistance.
- General purpose compound in engineering.
- Short curing epoxy (2 hours).

81 23 88	Diamant Ultrametal ceramic steel putty 1kgs/set	Set

DIAMANT Ship Repair Set

The "must have" solution kit for general maintenance as well as emergency repairs. The ship repair set provides solutions from simple leak repairs up to emergency repairs of pipes, pumps, tanks and other equipment in the open sea.

The set consist of :

1 x 500 grm	Plasticmetal cast-iron WF 0062
2 x 500 grm	RR-Metal 0316
1 x 500 grm	Ultrametal ceramic rapid 1685
1 x 500 grm	Ultrametal ceramic-steel 1683
1 x 500 grm	Diagum putty 0373
1 x 200 ml	DIAMANT cleaner liquid 1417
div.	Application and mixing tools, reinforcement materials, clamps and technical documentation

81 23 89	DIAMANT ship repair set	Set

DIAMANT Diagum

Cold-curing 2-component elastomer for reliable repairs which cures to a tough medium-hard rubber (Shore A85). After curing the product is extremely elastic and resistant against chemical and physical loads up to 160°C. The elastomer perfectly adheres to all metals, natural and synthetic rubbers, nitrile, butyl, concrete, fiberglass and wood. Diagum is commonly used on pipes, pipe bends, clutch parts, polishing drums, rubber hoses, rubber rolls, rubber wheels, surface seals, conveyor belts and many other parts. Diagum is available in putty and liquid viscosity.

CODE	Description	Unit
81 23 93	DIAMANT diagum liquid, 500 grm/set	Set
94	DIAMANT diagum putty, 500 grm/set	"

DIAMANT RR Metal

Quick and reliable repair material for metal parts even on WET SURFACES or UNDERWATER. Two component type rapid repair system for voids, cracks, dents and holes in all kind of machine elements, castings, pipes, tanks, pumps and engines. It adheres to nearly all surfaces and offers a wide range of protection against corrosion, erosion, chemical, thermal and physical attacks. Permanent temperature resistant up to 160 °C / 320 °F and a free mixing ratio gives you the possibility to adjust the viscosity from liquid to putty to fulfill your needs during the application.

Product Benefits :
- Applicable on wet surfaces.
- Fast curing (Even underwater).
- Resistant up to 160°C.
- Free mixing ratio (Liquid & putty in one product).

Unit Per Set

CODE	Description	Contents	
		Powder	Hardener
81 23 98	Industrial Pack	650 grm	350 grm

DIAMANT Plasticmetal WF

Quick and reliable repair material for metal parts even at HIGH TEMPERATURES. Two component type rapid repair system for voids, cracks, dents and holes in all kind of machine elements, castings, pipes, tanks, pumps and engines. It adheres to nearly all surfaces and offers a wide range of protection against corrosion, erosion, chemical, thermal and physical loads. Permanent temperature resistant up to 250 °C / 480 °F and a free mixing ratio provides you the possibility to adjust the viscosity from liquid to putty to fulfill your needs during the application. Plasticmetal has been developed for an outstanding ease of use compatible with superior technical properties.

Product Benefits:
- Temperature resistant up to 250 °C.
- Very high proportion of metallic fillers.
- Excellent technical characteristics.
- Fast curing.
- Machinable like metal.
- Variable viscosity.

DIAMANT Ultrametal Putty

The general purpose compound in engineering. The polymer metal is highly resistant against chemical and physical loads and is machinable like metal: file, mill, turn, and bore, thread cutting and polishing. Up to 90% metallic filters allow best metal properties and guarantee a long-lasting repair. Ultrametal has been developed especially for large-scale repairs with an ineffectual shrinkage.

Product Benefits:
- General purpose compound in engineering.
- Preferred choice for large-scale repairs.
- Deliverable in service boxes.
- Mixing ratio 1:1 eases the application.

81 23 96	DIAMANT Ultrametal putty, 1,000 grm	Set

DIAMANT UM1250

The quick repair solution for emergency situations. Very good adhesion to any kind of metal even on OILY SURFACES. Short curing times make DIAMANT UM1250 the first choice to repair parts at sea. Whether housings, pumps, containers, engine blocks, cylinder heads, gear boxes, bearing seats, coolers, propellers, impellers, tubes or pipes, UM1250 is your solution to fix the problem within a couple of minutes. Suitable for small areas with good resistance to wear, abrasion and extremely resistant to aggressive chemicals. Machinable like metal. Mixing ratio 1:1 by volume, delivered in a complete box with all needed tools in one set.

Product Benefits:
- Applicable on oily surfaces.
- Emergency repairs / first curing.
- Perfect adhesion on metal parts.

81 23 97	DIAMANT UM1250, 500 grm	Set

Weicon Emergency Repair Kit

For emergency repairs and maintenance works on board of ships, equipped with many different products that support you in various cases, cover most cases of offshore emergency repairs and maintenance works during long ways.

Repair Kit 1 covers the most common emergency and maintenance cases, Repair Kit 2 and 3 covers a lot of different applications on board. The Repair Kits are suitable for all ships, where repairs and maintenance have to be done frequently.

The 3 standard repair kit contains:	Kit 1 (812907)	Kit 2 (812908)	Kit 3 (812909)

WEICON Plastic Metals

High-quality, two-component epoxy resin systems for fast, cost-effective and durable repairs of many types of material. Ideal for rebuilding of shafts, repairing leaking pipes and tanks, repair of pumps and valves damaged by erosion and/or corrosion and many other cases. Temperature resistant from –35°C to +120°C. After curing, the material is machinable with normal working tools and equipment.

Unit Per Set

CODE	Product	Content	Description
81 29 01 02	WEICON A	0.5 kgs 2.0 kgs	Putty, steel-filled. Temperature resistant from -35°C(-31°F) up to +120°C(+248°F). Especially suitable for the elimination of corrosion damages and pitting on tanks, repairs on pipes and castings, housings and machine parts. Also for the making of moulds and models, tools and fixtures. Certified by German Lloyd.
81 29 05 06	WEICON B	0.5 kgs 2.0 kgs	Viscous, steel-filled. Temperature resistant from -35°C(-31°F) up to +120°C(+248°F). Making of moulds and models, tools, templates, gauges and fixtures. Also for filling blowholes and microporosities on castings as well as for general repair works where a castable compound is advantageous.
81 29 10 11	WEICON BR	0.5 kgs 2.0 kgs	Putty, bronze-filled. Temperature resistant from -35°C(-31°F) up to +120°C(+248°F). For filling blowholes and rebuilding bronze equipment parts (e.g. propellers of ships).
81 29 03 04	WEICON C	0.5 kgs 2.0 kgs	Liquid , aluminium-filled. High temperature resistant from -35°C (-31°F) up to +220°C (+428°F). Suitable for pouring out moulds (e.g. vacuum and foam moulds), making fixing devices and tools, (e.g. injection dies) which are exposed to high temperatures.
81 29 21 22	WEICON F	0.5 kgs 2.0 kgs	Putty, aluminium-filled. Temperature resistant from -35°C(-31°F) up to +120°C(+248°F). Filling blowholes and reconditioning of parts (e.g. injection moulded parts, holding devices).
81 29 33 34	WEICON F2	0.5 kgs 2.0 kgs	Viscous, aluminium-filled. Temperature resistant from -35°C(-31°F) up to +120°C(+248°F). Making of castings, moulds and templates, predotypes and fixing devices. Ideal for pouring out swages to test their exactness or for pouring out fixing devices in ultrasonic welding machines.
81 29 51	WEICON HB 300	1.0 kgs	Putty, steel-filled. High temperature resistant from -35°C (-31°F) up to +200°C (+392°F), briefly up to +280°C (+536°F). Mixing ratio 1:1.
81 29 37 38	WEICON Ceramic BL	0.5 kgs 2.0 kgs	Liquid, brushable, mineral (carborundum and zircon)-filled , extremely wear resistant. Temperature resistant from -35°C (-31°F) up to +180°C (+356°F). Brushable surface prediction with extremely high wear and abrasion resistance. As a preventive coating or applied after repair , it reduces abrasion on castings, valves, blower vans and in many other applications.
81 29 41 42	WEICON Ceramic W	0.5 kgs 2.0 kgs	Putty, mineral-filled. Temperature resistant from -35°C (-31°F) up to +150°C (+302°F), briefly up to +260°C (+500°F). Brushable surface prediction with extremely high wear and abrasion resistance. As a preventive coating or applied after repair , it reduces abrasion on castings, valves, blower vans and in many other applications.

CODE	Product	Content	Description
81 29 31 32	WEICON SF	0.5 kgs 2.0 kgs	Putty, steel-filled, fast curing. Temperature resistant from -35°C (-31°F) up to +90°C (+194°F). For quick repairs and bondings (e.g. on leaky pipes, housings and gears) as well as for making anchorages and fixing devices. Certified by German Lloyd.
81 29 43 44	WEICON ST	0.5 kgs 2.0 kgs	Putty, metallic-filled. Temperature resistant from -35°C (-31°F) up to +120°C (+248°F).
81 29 45 46	WEICON TI	0.5 kgs 2.0 kgs	Putty, titanium-filled. Temperature resistant from -35°C (-31°F) up to +150°C (+302°F), briefly up to +260°C (+500°F). Repair of pumps, valves, wearing plates, ball bearing seats, shafts, centrifugal pumps and propellers.
81 29 35 36	WEICON UW	0,5 kgs 2,0 kgs	Putty, steel-filled, cures even under water. Temperature resistant from -35°C (-31°F) up to +120°C (+248°F). Particularly suitable for repair and maintenance work at marine and off-shore sector, wherever dampness and wetness lead to bonding problems.
81 29 57 58	WEICON WP	2.0 kgs 10.0 kgs	Putty, mineral-filled, extremely wear resistant. Temperature resistant from -35°C (-31°F) up to +120°C (+248°F). For the protection of surfaces exposed to extreme abrasion and wear. Ideal for the lining of highly stressed spiral conveyors, friction plates, transport blowers, pulverization plants, chutes, and many other parts.
81 29 47 48	WEICON WR	0.5 kgs 2.0 kgs	Liquid, steel-filled, wear resistant. Temperature resistant from -35°C (-31°F) up to +120°C (+248°F). Repair of shafts, pouring out bearings, cutting and punching tools, making of castings, drawing moulds, underpouring machines and foundations.
81 29 49 50	WEICON WR2	0.5 kgs 2.0 kgs	Putty, mineral-filled, wear resistant. Temperature resistant from -35°C (-31°F) up to +120°C (+248°F). For repairs on conveyors, guides and sliding ways where rolling or sliding movements cause wear. Also for lining pump housings and extruders and for the repair of worn-out flanges.
81 29 55 56	WEICON CBC	3.0 kgs 10.0 kgs	Liquid, self-levelling, long pot life of 30 minutes, almost no shrinkage, permanent high static strength, high resistance to ageing, chemical-resistant, vibration-proof.
81 29 85	Casting Resin MS 1000	1.0 kgs	Liquid, unfilled. Temperature resistant from -35°C (-31°F) up to +120°C (+248°F). Universal casting and laminating resin system. May be filled with a variety of different fillers. Can also be used as back-filling material.
81 29 52 53 54	Epoxy Resin Putty	0.1 kgs 0.4 kgs 0.8 kgs	Putty (kneadable), mineral-filled. Temperature resistant from -35°C (-31°F) up to +200°C (+392°F). Mixing ratio 1:1. Used for fast repairs and maintenance works such as fixing screws, anchors and plugs, repairing leaky tanks and pipes, reconditioning castings, repairing shafts, bearings, pumps and housings, reconditioning defective threads.
81 29 59 60	Mould Release Agent Liquid F 1000	250 ml 1 ltr	Liquid, solvent-containing release agent on a waxy basis for epoxy resins and polyurethanes. It is especially suitable for release processes from smooth and non-absorbing surfaces.
81 29 64 79	Mould Release Agent Wax P500	150 g 0.5 kgs	Putty, solvent-containing release agent on a waxy basis for epoxy resins and polyurethanes. It is especially suitable for release processes from smooth and/or porous surfaces.

Graphite Powder

Powdered graphite-mir-floated. Extra finely powdered graphite for precision equipment, etc. It is more adhesive than ordinary flake graphite.

81 24 01	Graphite powder, 0.5 kgs	Tin
02	" " 2.0 "	"
03	" " 5.0 "	"

Graphite Flakes

A standard lubricating graphite, particularly useful for engines, compressors, etc. Graphited surfaces improve lubrication and help oil and grease to last longer. These graphite flakes are also used as paint pigment for heat resistant and protective coats. Furnished in tins of 1, 2.5 and 5 kgs.

81 24 06	Graphite flake, 1.0 kgs	Tin
07	" " 2.5 "	"
08	" " 5.0 "	"

Graphite Paste

An outstanding product for high temperature application such as on cylinder head studs, face plate studs, boiler and manhead gaskets, gas burner connections, studded and threaded connections, etc. Will keep joints leakproof against oil, acids and gases which might penetrate ordinary oil mixed compounds.

81 24 11	Graphite paste, 0.5 kgs	Tin
12	" " 2.0 "	"
13	" " 5.0 "	"

Pipe Joint Compounds

For sealing threaded joints in iron, stainless steel, brass, copper and plastic pipes used for gas, water, steam, compressed air, etc. Withstands most corrosive liquids and gases. This filler also acts as a lubricant. Furnished in a 2.5 kgs tin only.

81 24 20	Compound, pipe joint, 2.5 kgs	Tin

Rock Wool
(Mineral Glass Fiber)

For building insulation, ovens, ducts, etc. of temperatures up to 600°C (1,112°F). Furnished 25 kgs per bag.

Unit Per Bag

Sheet		Granulated	
CODE	Size mm	CODE	Weight
81 24 32	25 × 605 × 1,820	**81 24 34**	25 kgs
33	50 × 605 × 1,820		

Fire Clay Powder

Dry milled powder for boiler brick work, anti-fire walls, etc. Will withstand up to 1,200°C. 30 kgs in a sack.

81 24 35	Fire clay powder, 30 kgs	Bag

Refractory Products

Plastic refractories are firebricks in plastic putty-like form which can be installed by ramming the plastics with a wooden hammer or air rammer into any shapes required. After installation, it is baked with operation temperature of the furnace itself (over 1,000°C) to form the tough walls.

Castables are refractory cements which are mixed with the proper amount of water for installation. May be poured into frames or trowelled as is the case with ordinary cement, or gunned by gunning machines. After installation by whichever method, it hardens to a sufficient strength.

From among various types of products, the most common products are listed below and other products such as "Pliram" (ramming mix) or "Pligun" (gunning mix) are also available if required.

Unit Per C/T

Anticorrosive Tapes

Uses:
For protection against corrosion and the water-proofing of pipes, flanges and valves for marine use.

Compound:
A neutral compound based on saturated petroleum hydro carbons (petrolatum) with inert fillers.

Fabric:
Fabric carrier free from chemical impurities, fully impregnated and coated on both sides.

Characteristics:
Unalterable in composition and plasticity over a wide range of temperatures. Slight superficial oxidation occurs in atmospheric application and renders the surface less tacky. Has a very high degree of impermeability to water. Won't crack or harden. Unaffected by vibration and highly resistant to mineral acids, alkalis and salt. Basically no VOC's (Volatile Organic Compounds) contains so it is friendly to the environment.

Specifications

Thickness	1.2 mm
Weight	1.4 kgs/m²
Elongation	20%
Temperature	For applicable 5°C to 55°C

Unit Per Rol.

Sub-Materials for Anticorrosive Tape

Paste
A primer for increasing the adhesion of anticorrosive tapes.

Mastic
Filler or sealer on the uneven surfaces (same composition as anticorrosive tapes).

Unit Per Box

CODE	Brand	Contents	Per Box	Weight kgs
81 24 81	Paste	3 kgs/can	3 cans	9
81 24 83	Mastic	0.88 kgs/bar	25 bar	22

Anti-corrosive Tapes
SeaSeal™ Sealants

SeaSeal™ products utilize the latest viscous-elastic technology to gain superior performance in anti-corrosion or water proofing situations such as pipe, pipe joint and flange corrosion protection as well as hatch sealing, and conduit box packing. Since it has no VOC's (Volatile Organic Compounds) it is friendlier to the environment.

Properties
Impermeable to moisture and gases
Immediate adhesion to substrates
Never will crack or become brittle
Non-carcinogenic, no VOCs
Non-toxic, nonflammable
Inert material, no deterioration
NO primer needed

SeaSeal™ Tape

It is available as a quick wrap or paintable product. In the quick wrap from it has a removable backing and a clear overlay on the topside for sealing, pipe spans, coating transitions, elbows & tees or pipe coating rehabilitation in salty and humid environments.

The paintable version has all the qualities of the quick wrap and it has a white polymer topcoat that can be painted after application.

SeaSeal™ Paste

Anti-corrosion paste ideal for submerged items such as nuts or any situations requiring an extra measure of protection.

81 24 95	Paste, anti-corrosive, SeaSeal™, 30mm x 30mm x 2.7mtr	Pc.

SeaSeal™ Sealant

Available in 30 oz tube, and allows SeaSeal to be pumped into void spaces.

- Fills voids and spaces for corrosion prevention.
- Flange and valve protection.
- Waterproofs conduits and junction boxes.

81 24 96	Sealant, anti-corrosive, SeaSeal™, 30 oz	Tub

Flat Patch Leak Sealant Kits
STOP IT® Flat Patch

A leak sealant product designed for applications where localized repair is needed or full pipe wraps are impractical. The carbon fiber composite repair system safely and quickly restores operations up to 1,000 psi, and provides localized corrosion inhibition.

Applications can be made regardless of surface orientation (i.e., vertical or horizontal) and will result in a durable repair that will not shatter or crack, even under extreme operating conditions. Operations may resume in as little as 4 hours following application and cure under ambient conditions.

Supplied in a kit with all the necessary components for field installation*.

* Installation requires no special training and involves minimal surface preparation.

Applications:
Tanks • Vessels • Large Diameter Pipes • Valve and Pump Casings • Welded Seams Rail Cars • Roofs • Drums • and More

Shelf Life:
6 months from date of purchase when stored at 40° to 83°F (5° to 28°C).

Unit Per Set

CODE	Kit Size	CODE	Kit Size
81 24 65	4 Inch x 4 Inch (100 mm x 100 mm) Kit, yield for 2 Repairs	**81 24 70**	6 Inch x 6 Inch (150 mm x 150 mm) Kit, yield for 1 Repair

Dispensing Guns for Leak Repair Kit STOPIT® HP/Flat Patch

Dispensing gun is not included in leak repair kit and available separately on request.

81 24 76	Dispensing Gun, 200 ml for STOPIT HP/Flat Patch	Pc.

Tapes for Prevention of Leakage and Corrosion, and for Insulation

Leak None Tape #117

Excellent workability and fitting many kinds of piping or winding materials. High close-adhesiveness and self-adhesiveness.

- Good Workability

  Since Leak none tape is self-adhesiveness type, it has good workability without sticking to the hands or any goods surrounding the working space. The tape, slightly tensed while taping, will adhere within 20 to 30 minutes by overlapping about every half width of tape to the material. It is not necessary to fasten by any hose band over the wrapped tape.

- Applicable of Underwater Taping

  Able to stop the liquid leaking (about 2 to 3 kgf/cm²) and also able to tape even in water. In this case the tape must be winded, pressing over by hand, to the material to avoid the water and trash permeating between the layer of tapes.

- Applicable to Various Materials/Uses

  This tape is applicable not only for protecting the leakage but also preventing the damage by salt and for electric insulation. This tape can be applied to various kinds of material, such as metal, gum, plastic resin including PVC, piping stick materials or line materials, etc.

Specification and Characteristic

Thickness and Colour	0.5 mm, Black
Expansion (%)	450
Peel Adhesion (N)	30 (20mm width)

High-Adhesive Butyl Sealing Tapes

A self-adhesive sealing tape made of a butyl rubber compound, protected by a reinforced aluminium film, making it highly resistant to ageing and oxidizing caused by atmospheric and chemical agents. Highly adhesive to all materials and especially to plastic, glass, steel, polycarbonate and wood. Especially used to repair small leaks and water infiltrations, for example around windows.

Characteristics:
Cold applied / Waterproof and self-sealing / Resistant to ageing and UV-rays / Excellent adhesion at low temperatures.

Compound color: Grey

Application temperature: 0°C / +40°C

Service temperature: -30°C / +90°C. up to 160°C for max. 24h.

Gore Joint Sealants

Pillar No.3300

A rope-shaped gasket made of stretched 100% PTFE with double-sided tape attached to one side. Its shape and the marshmallow-like structure make this sealant a great choice for use with flanged that have large surface areas, complex shapes, or rough surfaces.

Features & Performance:
- Inert to almost all chemicals.
- Reliable sealing performance (max 3.3 MPaG).
- Thermally resistant.

Applications
Extremely flexible and compressible, and can not only be used as a gasket but for numerous other purposes.

Unit Per Rol.

PTFE Joint Sealant Tapes

CORDSEAL™ <Soft>

A marshmallow-shaped free-size sealing material, which has been modified to be flexible and very tough, while maintaining the PTFE's excellent chemical resistance and heat resistance properties.

These are for the temporary repairs.

Features:
- Excellent chemical resistance.
- Heat resistance.
- Good workability.

Temperature	Pressure (MPa)
-240 to 260°C/-400 to 500°F	Max 2.0 (gas), Max 5.0 (liquid)

Suitable fluids: General fluids (water, steam, oil, etc.), solvents, corrosive liquids

Applications: Large diameter equipment (rough finished flange, strained flange, insufficient tightening force), tanks, heat exchangers, pressure vessels, duct flanges, pipe flanges, gland packing for valves

Oval type

VALQUA® No. 7GS66A

String shaped product with an oval cross-section [string type] and adhesive to improve workability.

Silicone Sealants

When extruded, reacts with humidity in the air, curing inwards from the surface and becoming silicone rubber. Has outstanding adhesion to glass, ceramic, aluminium, and many plastics. Resists sunlight, weathering, water, and most chemicals. An excellent insulator, its dielectric strength is unaffected by electrical cycling or stress. Uses include potting electronic components, insulating electrical boxes, fabricating and repairing gaskets, and making expansion and contraction seals in bridges and tunnels. It is also used for general maintenance, caulking and sealing, and for production bonding. Available in 100 grm and 350 grm weight tubes.

Sealing Agents

Permatex Form-a-Gasket

Available in many types of gaskets, but the 3 most common types are described below:

1. Form-a-Gasket No. 1
   Hard-setting sealant. A fast-drying, hard-setting, heavy bodied sealant ideal for repairing gaskets, etc.
2. Form-a-Gasket No. 2
   Pliable-setting sealant. A non-hardening, heavy bodied pliable sealant for semi

permanent assemblies.

3. Aviation Form-a-Gasket No. 3
   A non-hardening, liquid, brushable sealant.

Unit Per Tub or Can

Name of Mfr. : SAF-T-LOK Corporation.

Silicone Gaskets

Paste type sealing gaskets to apply to any shape of flanges, casing or cover. Due to oil resistance and anti-freeze performance, it can be applied to Oil pump, Water pump, Valve cover, Crankshaft end, Transmission case, etc. Will be tack-free within 15 minutes.

Unit Per Tub.

Gasket Paste

Gasket Paste is an agent employed to enhance the sealing effect of gasket contact surfaces and to facilitate peeling off gaskets when disassembling joints. Please select the optimum type from the variety of products listed below.

Unit Per Can/Tube

CODE	Product Name	Applicable Temperature	Description
81 26 91	No. 5 2.5 kgs/can	-200 to 200°C (-328 to 392°F)	Black paste containing special oil-soluble adhesive compounded with fine graphite particles. Suitable fluids: Water-based fluids (steam, hot water, water, seawater, acid, alkali, salt solutions and alcohol).
81 26 92	No. 5M 2.5 kgs/can	-200 to 200°C (-328 to 392°F)	White paste containing special oil-soluble adhesive compounded with fine mica particles. Suitable fluids: Water-based fluids (hot water, water, seawater, acid, alkali and salt solutions), where white paste is specifically required.
81 26 93	No. 6 2.5 kgs/can	-200 to 900°C (-328 to 1,652°F)	Black paste containing special water-soluble adhesive, with high oil and solvent resistance, compounded with fine graphite particles. Suitable fluids: Hydrocarbon-based fluids (petroleum-based oil, oil gas, solvents, solvent vapor, animal & vegetable oil, LNG and general gases).
81 26 94	No. 6M 2.5 kgs/can	-200 to 900°C (-328 to 1,652°F)	White paste containing special water-soluble adhesive, with high oil and solvent resistance, compounded with fine mica particles. Suitable fluids : Hydrocarbon-based fluids (petroleum-based oil, oil gas, solvents, solvent vapor, animal & vegetable oil, LNG and general gases) where white paste is specifically required.
81 26 95	Sealpaste™ 800 grm/can with brush	-50 to 300°C (-58 to 572°F)	Light brown paste containing a special non-drying oil adhesive, compounded with inorganic filler material and a small amount of solvent. Suitable fluids: When handling water, air and hydrocarbons (gasoline, kerosene, lubricating oil, natural gas, LPG, refrigerants, hydrogen sulfide, ethylene, butane, and thane), and also when it is necessary to prevent crevice corrosion on the flange surface.
81 26 96 **97**	New Valflon™ Paste 100 grm/ Tube 1 kgs/can	-200 to 300°C (-328 to 572°F)	Fluororesin powder that is water-dispersed using surfactant agents. Suitable fluids: When handling highly corrosive fluids (strong acids, alkalis, or halogens and when handling oxygen) when noncombustible materials are required.

Wood Glues

Has superior adhesion and is designed exclusively for use in general wood working. Available in many sizes, but the 1 kgs tin is coded as below :

81 27 11	Glue for wood, 1 kgs	Tin

Quick Bonding Adhesives

A unique adhesive which forms a strong bond instantly with almost all materials such as rubber, plastic, and metal to metal. Does not require solvents or any other special treatment. Mainly composed of alpha cyanoacrylate monomer. Harmful to the skin.

Unit Per Tub.

Glue Araldite

Epoxy type, strong adhesive, liquid glue for use with almost all materials such as metal, ceramic, glass, wood, stone, paper, leather, rubber, plastic and styro-foam, etc. This is an epoxy resin. When cured, it becomes a firm,

clear, transparent gel. 10 minutes quick hardening type and 12 hours hardening standard type are available. This glue is supplied with the hardener.

Unit Per Set

Loctite® Engineering Adhesives

Loctite® technology strengthens the assembly of two or more parts by filling all the space between mating surfaces with a single-component liquid which chemically self-hardens at room temperature into a tough heat-and-solvent-resistant structural solid. From among the various types of products, the most common products are listed below.

Unit Per Btl.

CODE	Type No.	Size	Characteristics
		Threadlocker	
81 27 51 81	222	50 ml 250 ml	**Low Strength/Small Screw** Ideal for fastener diameters of 1/4"(6 mm) and smaller. Controlled lubricity for accurate clamp loads. Parts can be separated using hand tools.
81 27 52	242	50 ml	**Medium Strength** A general-purpose, removable threadlocker for fasteners between 1/4" and 3/4"(M6 to M20) diameters. Controlled lubricity for accurate clamp loads. Parts can be separated using hand tools.
81 28 44 45	243 (Thread locker, Blue)	50 ml 250 ml	**Medium Strength/Primerless** A general-purpose, medium strength threadlocker with improved temperature resistance and oil tolerance. Does not require most fasteners to be pre-cleaned or primed before use. Suitable for fasteners up to 1 1/2" (M36).
81 28 11	248 (Thread locker, Blue)	19 ml	**Semi-Solid - Medium Strength** General-purpose threadlocker for all nut and bolt applications, especially fasteners up to 2" (M50). Removal with handtools. The semisolid formula also means it won't spill or leak.
81 28 46 47	263 (Thread locker, Red)	50 ml 250 ml	**High Strength/Primerless** A general-purpose, high strength threadlocker with improved temperature resistance and oil tolerance. Does not require most fasteners to be pre-cleaned or primed before use. Locks fasteners up to 3/4" (M20).
81 28 12	268	19 ml	**Semi-Solid - High Strength** Semi-solid stick is high strength prevents loosening of threaded fasteners. Well suited for fasteners up to 3/4" (M20) and is removable with heat and hand tools. Red colour is available.
81 27 46 64	270 (Thread locker, Green)	50 ml 250 ml	**High Strength/Primerless** A general-purpose, high strength threadlocker with improved temperature resistance. Does not require most fasteners to be pre-cleaned or primed before use. Locks fasteners up to 3/4" (M20).
81 27 56 86	290	50 ml 250 ml	**Wicking Grade** A medium to high-strength threadlocker for pre-assembled bolts up to 1/2"(M12). Penetrates threads by capillary action. Secures set screws and other assemblies after settings are completed. Seals welds and porous metal parts. Protects threads from rust and corrosion. Localized heating and hand tools are needed for disassembly.
		Thread Sealant	
81 28 48 49	55	50 ml 150 ml	**Thread sealing cord for metal and plastic pipes** Non curing, immediate, full pressure seal for a quick, easy and reliable seal. For pipes up to 4 in. and temperatures up to 150°C.
81 27 48	542	50 ml	**Fine Threads** A liquid sealant recommended for sealing the fine threads of hydraulic and pneumatic connectors.
81 28.21 22	545	50 ml 250 ml	**Hydraulic/ Pneumatic Fittings** Contains no fillers of particles that could contaminate system fluids, foul valves, or clog fine filters and screens. Suitable for fittings up to 2" (M50) in diameter. Excellent solvent resistance.
81 28 23 24 25	567	50 ml 250 ml 350 ml	**PST Thread Sealants High Temperature** Excellent solvent resistance, allows easy assembly, prevents galling, and can withstand temperatures up to 400°F (200°C). Excellent for high pressure applications, it locks and seals tapered metal, pipe threads and fittings. Ideal for stainless steel, aluminium, galvanized metal, and other inert metals. Disassembles with hand tools.
81 27 62 94	572	50 ml 250 ml	**Low Strength** Low strength sealant with moderate fixture speed for use on coarse threads.
81 27 49 95	577	50 ml 250 ml	**Coarse Threads** Medium strength, general-purpose sealant for use on coarse, threaded components.
		Flange Sealant	
81 27 61	504	250 ml	**Gasket Eliminator Gap Filing Flange Sealant** A single-component, instant, low-pressure seal that fills gaps to 0.762mm (0.030").

(to be continued)

(to be continued)

Unit Per Btl.

CODE	Type No.	Size	Characteristics
81 27 90 91	515	50 ml 300 ml	**Gasket Eliminator Flange Sealant** Makers flexible gaskets for rigid machined flanges with less than .1.27mm (0.050" gap). Flexes with flanges that move in service.
81 28 13 14 19	518	25 ml 50 ml 300 ml	Semi-flexible gasketing product for machined metal flanges. Ideal for use on rigid iron, steel and aluminium flanges.
81 28 35 81 27 47	574	50 ml 250 ml	**Rigid Assembly Gasketing Products** Anaerobic, fast curing (unprimed 1-12hrs, primed 15min. to 2hrs), thixotropic, can fill gap until 0.254mm (0.01") without prime and 0.508mm (0.02") with prime. Suitable for gasket sealing within temperature range –54°C to 150°C (–65°F to 300°F). The products cures when confined in the absence of air between close fitting metal surfaces. Orange colour is available.
81 28 20 34	5188	50 ml 300 ml	Gasketing product for sealing rigid flanges, especially aluminium flanges; excellent chemical resistance; superior adhesion, can tolerate slight oil contamination on the flange surface.
81 28 37 38 39	587	70 ml 190 ml 300 ml	**Blue, High Performance RTV Silicone Gasket Maker** Forms tough, flexible gaskets directly on the flange. Offers excellent adhesion to oily surfaces. Low odor, non-corrosive, low volatility. Withstands temperatures to 260°C (500°F) intermittent. Resistant to most chemicals and solvents. Fill gaps to 6.35mm (0.25"). Typical applications include valve covers, rocker covers, oil pans, water pumps, end seals, intake manifolds, and rear axle housings. Excellent adhesive for bonding and repairing fabricated silicone gaskets.
81 28 41 42 43	598	70 ml 190 ml 300 ml	**Black, High Performance RTV Silicone Gasket Maker** Retains high flexibility and oil resistance for longer gasket life. Temperature range is –59°C to 329°C (–75°F to 625°F) intermittent. Low odor, non-corrosive, low volatility. Resistant to most chemicals and solvents. Fill gaps to 6.35mm (0.25"). Typical applications include oil pans, transmission pans, valve covers, valves and guides, timing gear covers, and differential covers.

(to be continued)

81 27 92 93	5699	95 grm 300 ml	**Grey High Performance RTV Silicone Gasket Maker** For flexible flange assemblies. Excellent fluid resistance. Easy to dispense, non-corrosive. Low odor, low volatility.
			Retaining Compound
81 27 96 97	603	50 ml 250 ml	**Press Fit/Oil Tolerant** A retaining compound tolerant of oil and other contamination. Seals and secures cylindrical assemblies up to 0.127mm (0.005") radial clearance. Fixtures in 10 minutes. Prevents fretting and corrosion of metal assemblies. Good for close-fitting parts.
81 28 26 27	620	50 ml 250 ml	**Slip Fit/High Temperature** A high temperature (450°F), high viscosity liquid retaining compound. Provides shear strength of over 3,800psi on steel. Locks and secures metal cylindrical assemblies up to 0.381mm (0.015") diametral clearance. Prevents metal fretting and corrosion. Seals against leakage. Typical applications include locating pins in radiator assemblies, sleeves into pump housings and bearings in auto transmissions.
81 28 28 29	638	50 ml 250 ml	**Slip Fit/Maximum Strength** A maximum strength retaining compound for use where high dynamic force or cyclic loading is expected. Locks cylindrical assemblies up to 0.010 in. Diametral clearance. Fixtures in 5 minutes.
81 27 50 98	648	50 ml 250 ml	**High Strength/Rapid Cure** A retaining compound recommended for continuous working temperatures up to 149°C (300°F). Fills gaps up to 0.1524 mm (0.006") diameter clearance. Fixtures in 5 minutes. Good for close-fitting parts.
81 28 30	660	50 ml	**Quick Metal Retaining Compound** A creamy, non-running gel that is applied onto cylindrical parts to fill surface imperfections and repair worn areas. It contains no metal, but once assembled hardens to a strength that often doubles that of a press fit. Used for repairing worn coaxial parts without remachining; enables reuse of worn bearing seats, keys, splines, tapers or for retaining shims.
81 28 31 32	680	50 ml 250 ml	**Slip Fit/ High Strength** A high strength, high viscosity room-temperature- curing adhesive used to join fitted cylindrical parts. It fixtures in 10 minutes and provides a shear strength of 4,000 psi after 24 hours. Capable of filling diametral gaps up to 0.27mm (0.015"). Allows relaxed machining tolerances and replaces clamp rings, set screws, and snap rings.

Unit Per Btl.

CODE	Type No.	Size	Characteristics
Toolboxes & Specialty Kits			
81 28 33	-	12.9 ml	**Form-A-Thread Stripped Thread Repair Kit** Permanently repairs stripped threads and fasteners in 5 minutes (up to SAE Grade 5 English and 8.8 metric). Allows up to 1.538 in. lbs. torque (on M25 bolt) and 300°F. Resists most shop fluids. Grey colour is available.

Loctite® Marine Maintenance & Emergency Repair Kits

A "must have" solution kit for general maintenance and emergency repair for every vessel. The Marine Maintenance & Emergency Repair Kit provides solutions from simple vibration-proof bolt fastening to emergency pipe repair in open sea. Applications include thread locking, thread sealing, retaining, flange sealing & gasketing, emergency metal rebuilding & pipe repair, anti seize and bonding. The kit contains the following products.

Instant Adhesives (Cyanoacrylates) Loctite®

Loctite® instant adhesives cure very quickly when confined between surfaces, triggered by the humidity on the surfaces. Cyanoacrylates are chosen for bonding small parts to achieve extremely fast fixturing. They are clean and easy to apply and join a wide variety of dissimilar materials. From among the various types of products, the most common products are listed below.

Unit Per Btl.

CODE	Type No.	Size	Characteristics
81 27 87 88	401	20 grm 50 grm	**PRISM Surface Insensitive Instant Adhesive** A general-purpose surface insensitive adhesive for difficult-to-bond surfaces.
81 28 15 16	404	4 oz 1 lb	**Quick Set Instant Adhesive** For general maintenance and repair. Designed for bonding of plastics and elastomeric materials where very fast fixturing is required.
81 28 17 40	406	20 grm 50 grm	**Wicking Grade** Designed for bonding plastics and electrometric materials where very fast fixturing is required.
81 27 79 89	454	3 grm 20 grm	**PRISM Surface Insensitive Instant Adhesive Gel** Designed for the assembly of difficult-to-bond materials that require uniform stress distribution. Particularly suited for bonding porous or absorbent materials. Also formulated for faster cure speeds on dry or acidic surfaces and substrates.
81 28 18	480	20 grm	**Rubber-toughened Instant Adhesive** Low viscosity, elastomer-modified instant adhesive. Bonds metals and rubbers. Excellent peel, impact and shear strength. NSF/ANSI 61 certified for potable water.
81 27 58	495	20 grm	**Super Bonder Instant Adhesive** A general purpose adhesive designed to bond rubber, metal, and plastic parts with gaps to 0.1016mm (0.004").
81 27 59	496	20 grm	General Purpose Rubber Bonding
81 28 00	3090	10 grm	Gap filling general purpose 2K instant adhesive; for gaps up to 5mm.
81 28 02	HY4060GY	25 grm	**Repair Structural Hybrid Adhesives** Excellent environmental and temperature resistance. Outstanding substrate versatility. Simple hand mix solution

Cleaner and Activators Loctite

Before bonding surface cleaners.

Unit Per Can

CODE	Contents	Description
Loctite® 7063 Universal Cleaner & Degreaser Before Bonding		
81 27 36 37	400 ml 10 ltr	General Purpose Cleaner & Degreaser Solvent-based, removes most greases, oils and lubrication fluids from all surfaces, leaves no residues; ideal for use prior to bonding and sealing applications.
Loctite® 7649 Activator		
81 27 38 39	150 ml 500 ml	Activator to speed up cure on passive and inactive surfaces; suitable for threadlocking, pipe and threadsealing, gasketing and retaining applications; solvent-based; on-part life of up to 30 days.

Adhesives SAF-T-LOK

SAF-T-LOK anaerobic adhesive/ sealants reliably lock, retain and seal metal assemblies in a wide range of applications. By eliminating the loosening of assembled components, costly breakdown is prevented and damage to equipment from vibration and shock is avoided. From among the various types of products, the most common products are listed below.

Unit Per Btl.

CODE	Type No.	Size cc	Characteristics
81 27 65	T22	50	Low strength, holds screws, but allows adjustment
81 27 66	T42	50	Medium strength, locking & sealing screws & bolts
81 27 67	T70	50	High strength, locking & sealing screws & studs to 1/2" diameter
81 27 68	T77	50	High strength, locking & sealing studs over 1/2" diameter, sealing flanges
81 27 69	S90	50	Medium strength, sealing porosity (Weld beads / Castings)
81 27 70	SA5	50	Bonds metal, plastic & wood
81 27 71	IB45	20	Bonds in second, bonding rubber or plastic parts
81 27 72	IBM100	20	Bonds in second, bonding metal parts. Excellent for nameplating
81 27 73 74	PFS	50 250	Sealing metal flanges. Any size or shape gaskets
81 27 75 76	TPS	50 250	Instantly seals tapered threads hydraulic pipe, etc.
81 27 77	R01	50	Retaining bearing / bushing, gears and pulleys, sealing porosity
81 27 78	Primer	6 pz	Primer to accelerate, cure, or cure at temperature below 0°C

WEICON Epoxy Adhesives

WEICON Epoxy Adhesives are cold-curing, solvent-free two-component systems with extremely strong bonding properties. They enable material bonds with high tensile and impact strength and are thus ideal for assembly, repairs and production.

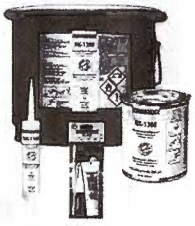
Unit Per Pc.

CODE	Product	Content	Description
81 29 80	Epoxy Minute-Adhesive	24 ml	Fast-curing, transparent 2-component epoxy adhesive, in a handy double syringe. Liquid, extremely high bonding strength. Produces residually elastic bonds with high impact strength on materials like metal, glass, ceramic, wood and many hard plastics.
81 29 81	Fast-Metal Minute-Adhesive	24 ml	Fast-curing, steel-filled 2-component epoxy adhesive with extremely high bonding strength, also suitable for the application on vertical surfaces. Enables material bonds with high tensile and impact strength. Machinable.

Name of Mfr.: WEICON GmbH & Co. KG

WEICON RK-Construction-Adhesives

Methacrylate-based Adhesives



Used in many bonding applications in the marine industry – especially in environments where epoxy adhesive are not strong enough (for example due to high temperature, vibration, shocks and structural demands).

- Quick and high initial bonding strength (mechanical durability after 8 – 9 min.).
- Residual elasticity and impact resistance.

Typical Applications;

- Bonding name plates, controls, instruments, consoles for machines.
- Bonding galvanized profile sheets for cabins
- Magnet bonding.
- Bonding metal and plastic laminates, sandwich elements for ship construction.

Unit Per Pc.

CODE	Product	Content	Description
81 29 91	RK-1300	60 g	2-component adhesive, temperature resistant from -50°C (- 58°F) up to +130°C (+ 266°F), briefly (30 minutes) up to +180°C (+356 °F), no mixing, handling strength after 2-4 minutes, high shear and peel strength.

(to be continued)

Unit Per Pc.

CODE	Product	Content	Description
81 29 92	RK-1500	60 g	2-component adhesive, liquid temperature resistant from -50°C (- 58°F) up to +130°C (+ 266°F), briefly (30 minutes) up to 180°C (+356°F), no mixing, handling strength after 2-4 minutes, high shear and peel strength.
81 29 93 **94**	RK-7000	24 g 50 g	Fast-curing, high-strength construction adhesive (initial strength after 10 – 15 minutes) for bonding different materials. This high-viscosity type allows application even on vertical surfaces. Colour after curing; light beige, opaque. Available both in a practical double syringe or in the modern Easy-Mix mixing and dosing system.
81 29 95	Easy-Mix Hand Dispenser D 50	-	Suitable for RK-7000
81 29 96	Mixing Nozzles	-	Suitable for RK-7000

WEICONLOCK®
Anaerobic Adhesives and Sealants

The ideal solution for construction, production and maintenance: WEICONLOCK® products are high quality anaerobic adhesives and sealants on the basis of special methacrylate resins, especially made for economical threadlocking, retaining and sealing of threaded, cylindrical and pipe assemblies. The Pen-System packaging offers easy dosing and application.

Unit Per Pc.

CODE	Product	Content	Description
81 52 01 **02** **03**	AN 302-22	20 ml 50 ml 200 ml	Threadlocking, vibration-proof, medium viscosity, low strength, easy to disassemble.
81 29 12 **13** **14**	AN 302-43 DVGW TZW	20 ml 50 ml 200 ml	Threadlocking, approved to DVGW2 and KTW1, higher viscosity, medium strength, normal to disassemble.

WEICON Contact Adhesives

Unit Per Can

CODE	Product	Content	Description
81 52 37	GMK 2410	350 g Brush top can	A solvent-based Polychloroprene (CR) contact adhesive. Used for strong and flexible full-surface bonding of rubber to rubber and rubber to metal. It also bonds cellular rubber (e. g. neoprene), leather, felt, insulating material, textiles, wood, and many plastics. After curing, the joint is resistant to humidity.
38		700 g	
81 52 39	GMK 2510	324 g	2-component adhesive based on polychloroprene for full-surface and permanently elastic bonding of parts which are continuously exposed to dynamic loads. It bonds rubber, metal, textiles, leather, sponge rubber (neoprene), CSM (Hypalon), insulating materials, PU materials with an adhesive coating, wood and many plastics, to themselves and among each other. After curing the bonding is moisture-proof.
40		690 g	

Name of Mfr.: WEICON GmbH & Co. KG

WEICON Contact Cyanoacrylate Adhesives

Cold-curing one-component adhesives, free of solvents. They quickly polymerize by reacting with moisture and cure under light pressure. They will bond within seconds almost all materials to and among each other, such as: metals, plastics, glass, ceramics, wood, leather, natural and synthetic rubber.

Unit Per Pc.

CODE	Product	Content	Description
81 52 41	VA 8312	20 g	Low viscosity, very fast curing, especially suitable for bonding EPDM elastomers and plastics.
42		30 g	
43		60 g	
44		500 g	
81 29 27	VA 100	20 g	Medium viscosity, fast curing universal type for bonding plastics, rubber and metals to themselves or in combination.
28		30 g	
29		60 g	
30		500 g	
81 52 45	VA 1401	20 g	Medium viscosity, fast curing, good cure also on tissue, paper and carton as well as on other macropore elastomers.
46		30 g	
47		60 g	
48		500 g	
81 52 49	VA 2500 HT	20 g	High viscosity, slow curing, residual elasticity after curing, high temperature resistant up to +135°C (+275°F).
50		30 g	
51		60 g	
52		500 g	
81 52 53	VA 30 Black	20 g	Medium viscosity, slow curing, residual elasticity after curing, high temperature resistant from up to +135°C (+275°F). Especially suitable for rubber-bondings.
54		30 g	
55		60 g	
56		500 g	
81 52 57	VA 250 Black	20 g	High viscosity, slow curing, residual elasticity after curing, high temperature resistant up to +135°C (+275°F). Especially suitable for rubber-bondings.
58		30 g	
59		60 g	
60		500 g	
81 52 61	Contact GEL	30 g	Thixotropic (pasty), slow curing, for application on vertical surfaces. Allows re-alignment of the parts after contact.

Name of Mfr.: WEICON GmbH & Co. KG

WEICON One-component Adhesives and Sealants

Elastic adhesives and sealants are used in many areas of industrial production and assembly. They combine the advantages of adhesive bonding and sealing technology and are used wherever the elasticity and the sealing of a joint are the most important requirements.

Unit Per Pc.

CODE	Product	Colour	Content	Description
81 52 71	Flex 310 M Classic MS-Polymer base	White Black Grey	310 ml	For versatile use. Very good adhesion without primer on aluminium, stainless steel and many other surfaces. Immediately overpaintable (wet in wet). Excellent aging and UV stability. Sandable after curing.
72				
73				
81 52 74	Flex 310 M Stainless Steel MS-Polymer base	Stainless steel	310 ml	Suitable for various applications. Especially for applications where the colour of the sealant should be close to the colour of material(e.g. stainless steel, aluminium, etc.) Non-corrosive.

(to be continued)

(to be continued)

Unit Per Pc.

CODE	Product	Colour	Content	Description
81 52 75 **76**	Flex 310 M Super-Tack MS-Polymer base	White Grey	290 ml	Very high initial strength. For metals, plastics and many other materials. In particular suitable for bonding on vertical surfaces, indoor and outdoor. Replaces screws, pegs, rivets, and other traditional fixings.
81 52 77 **78**	Flex 310 M HT 200 MS-Polymer base	White Grey	290 ml	High temperature resistant. Very good adhesion on metal and most plastics. Allows bonding and sealing of parts before thermal coating (e.g. powder coating).
81 52 79 **80** **81**	Aqua-Flex SIKA MS-Polymer base	White Black Grey	310 ml	Special adhesive and sealant for a variety of applications, also on wet and humid surfaces. Free of isocyanate and solvents.
81 52 82 **83**	Silicone HT 300	Red	85 ml 310 ml	Temperature resistant up to +230°C (+446°F), briefly up to 300°C (+572°F).
81 52 84 **85** **86**	Black Seal Special Silicone	Black	85 ml 200 ml* 310 ml *Pressure-pack	Solvent-free special silicone sealant. Temperature resistant from -60°C (-76°F) up to +280°C (+536°F) (briefly up to +300°C (+572°F)).
81 52 87	Flex + Bond SIKA	Grey	85 ml	Silicon-free, strong and overpaintable adhesive and sealant on POP basis. Free of isocyanate and solvents.

Name of Mfr.: WEICON GmbH & Co. KG

Gasket Removers

Removes gaskets from any type of assembly in 10 to 15 minutes. Prepares metal parts for new gaskets, eliminating scraping and sanding.

Works on wood; non-corrosive on aluminium.

Not for use on plastics, linoleum or synthetic fibers.

81 28 01	Gasket remover spray, 420 ml	Tin

"O" Rings

Made from synthetic or natural rubber or teflon. When ordering, specify the material, outer and inner diameter as well as thickness. Since there are thousands of sizes available, only a basic illustration is given here.

81 30 01	"O" ring, material, outer diam x inner diam x thickness	Pc.

Rubber Strings

Synthetic rubber made round string for forming "O" rings with glue, etc. Any length is furnishable upon request.

Unit Per Mtr.

O-Ring Splicing Kits

Saves the need for complete disassembly. Eliminates the need for an inventory of different sized O-rings. Joints resist water/oil and are as strong as the rubber itself.

Kit contains :

1. 5.48 meter (3ft.) lengths of common diameters of Buna N cord.
2. 1 of Loctite 404 Quick Set Instant Adhesive.
3. 1 of o-ring fixture.
4. 1 of blade.
5. 1 each of water-proofing solution and cleanup solution.

81 30 70	O-Ring splicing kit	Set

Loctite Product No.00112 (480166 for U.K.)

O-Ring Kits

Specially designed for marine use, containing 17 sizes/222 pieces. Packed in a transparent sturdy- hinged acrylic case. Details of the sizes are as follows :

Vinyl Acetate Sponge Water Sheet Filters

Wet Type

Synthetic made sponge filter ideal for immersion in any cascade tank or sump for filtering of hydraulic systems, coolant fluids, etc. Size is 1,000 x 1,000 mm and 10 mm thick. Colour is milky white.

81 31 20	Filter, water, vinyl acetate sponge sheet, 10 x 1,000 x 1,000 mm	Sht

Vinyl Acetate Sponge Piece Filters

Wet Type

Same as the above filter but in pieces packed 1 kgs in polythene bag.

81 31 22	Filter, water, vinyl acetate sponge piece, 1 kgs	Bag

Vinyl Acetate Sponge Oil Filters

Dry Type

Specially designed for filtering lubricating oil, etc. Size furnished 2 mm thickness, 1,000 x 1,000 mm (39" x 39") of width and length.

81 31 24	Filter, oil, vinyl acetate sponge , 2 mm x 1,000 x 1,000 mm	Sht

Coco Fiber

For filtering water, oil, etc. Made from coco and packed 30 kgs in a carton.

81 31 26	Coco filber	Kgs

Loofah Sponges

Used for oil straining or filtering. Each sponge is approximately 40 cm in length. Furnished in pieces only.

81 31 28	Loofah sponge	Pc.

Copper Wool Filters (Copper Net Filters)

Made of wool-like fine copper and woven into flat tubes. Finely meshed net can strain out and refine lubricating oil or any other liquid. Furnished in a width of 100 mm and coiled approximately 5 kgs per roll.

81 31 30	Filter, copper wool	Kgs

Reflex Flat Gauge Glasses

"Klinger" type boiler gauge glasses. Available in pressure capacity of 2.0 MPa (20 kgs/cm²) and 3.9 MPa (40 kgf/cm²).

Oil Seals

The Oil Seal stops oil leakage and prevents water, dust and other harmful particles from getting into the workings of bearings. It keeps the bearing clean and lubricated for smooth rotation. Besides stopping leakage effectively, the oil seal is of compact size and is easy to install and remove.

Made of highly flexible synthetic rubber to match the motion of the shafts and act as an efficient sealant in simultaneous motion with the springs.

There are so many types of materials and sizes of oil seals, it is impossible to code them all. For this reason, the items described below are only the standard seal designs commonly used for a variety of applications and they are not coded.

Lip materials of the synthetic rubber are :
- Nitrile Rubber
- Polyacrylate Rubber
- Silicone Rubber
- Fluoroelast Rubber

When ordering, please specify the following points:
1. Name of the machine and place of application.
2. Detailed information of the lubricating oil used and the ambient temperature.
3. R.P.M. of shaft.
4. Oil Seal Type /Name / No.

Size: Shaft diameter × Outer diameter × Width

Type	Features
S Type	General non-pressure fluid sealing applications and severe grease sealing conditions. It is a single lip oil seal with a garter spring to provide a consistent radial load against the shaft. General limited working capacity : SMPS 12 m/sec. Temperature 120°C Pressure 0.3 kgf/cm²G.
T Type	General non-pressure fluid sealing applications with light duty exclusion of foreign materials. This design uses the primary lip configuration, with an auxiliary dust lip to provide effective light duty dust exclusion. General limited working capacity : SMPS 10 m/sec. Temperature 120°C Pressure 0.3 kgf/cm²G.
V Type	Economical design for grease retention or sealing viscous fluid. It is a single lip seal. General limited working capacity : SMPS 8 m/sec. Temperature 120°C Pressure 0 kgf/cm²G.
K Type	Economical design for grease retention or sealing viscous fluid with light duty exclusion of foreign materials. This type has an auxiliary lip for light dust exclusion. General limited working capacity : SMPS 5 m/sec. Temperature 120°C Pressure 0 kgf/cm²G.
D Type	The application which requires separating two fluids from each other should use two garter spring loaded lips. The "D" style incorporates the two lips into one design. General limited working capacity : SMPS 5 m/sec. Temperature 120°C Pressure 0.3 kgf/cm²G.

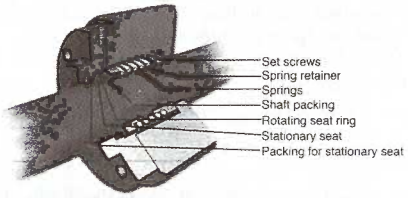
* SMPS denotes Surface Meter Per Second.

81 35 01	Oil seal, TYPE INNER DIAM or SHAFT DIAM, OUTER DIAM, WIDTH	Pc.

Mechanical Seals

The Mechanical Seal has two flat seal faces at right angles to the axis of the rotating shaft, preventing shaft wear. One is the seal face of the rotating seal ring and the other is the seal face of the stationary seal ring (stationary, seat or floating seat). One seal face (rotating seal ring) is allowed axial motion to permit the seal faces to remain in contact with each other despite endplay of the shaft, wear or runout of the seal faces. The seal ring is flexibly mounted on the shaft and rotates against the stationary seal ring.

The seal ring has a resilient packing, called shaft packing (O-ring or V-ring assembly) that allows the seal ring to slide back and forth along the shaft and at the same time prevent leakage between it and the shaft or sleeve as a secondary seal. The stationary seat is backed against the gaskets (mostly O-rings) to prevent leakage around its back.



Standard for Marine Pump Mechanical Seals

1. Scope of application

This standard is applied to the mechanical seal of the unbalanced single spring type (hereinafter referred to as mechanical seals). The mechanical seals are among those used for marine centrifugal pumps, gear pumps, and screw pumps, driven by electric motors, for pumping fresh water, seawater, fuel oil and lubricating oil, with shaft diameters in the range from 20 to 140 mm. However, special seals are excluded with operating conditions which exceed values stipulated in Section 2 "Criteria for Application" of this standard.

7TH
81

2. Criteria for application

2-1. Limited temperature

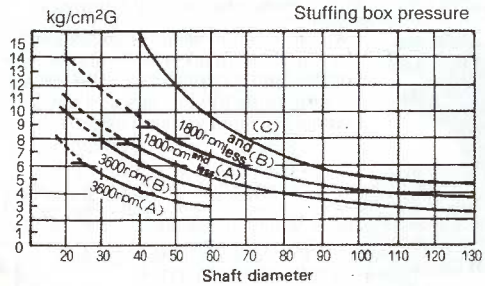
In using the mechanical seals, liquid temperature is restricted within values shown in the table.

Kind of Liquid	Temperature Limit (max.)
Fresh water	90°C
Sea water	40°C
Fuel oil and lubricating oil	100°C

Use cooler with the mechanical seal when the working temperature is higher than the recommended one.

2-2. Limit of pressure and peripheral speed

Pressure for the mechanical seal (stuffing box pressure) and peripheral speed are limited differently depending upon the face material combination. As a rule, the lines in the figure below show the upper limits.



(A) Ceramic vs Carbon
(B) Tungsten Carbide vs Carbon
(C) Silicone Carbide vs Carbon

1. For a pressure and peripheral speed located in the ranges shown by the dotted lines, use balance type mechanical seals.
2. If stuffing box pressure should be negative, please consult us beforehand.

3. Restriction of face materials against rust inhibiter

When the concentration of rust inhibiter exceeds 1,000 ppm, its effect on the seal materials often appears rapidly. Therefore, consult with a dealer before using a mechanical seal with concentrations of rust inhibiter of 1,000 ppm and over.

4. Cooling of the seal face

The normal practice is to require sufficient flushing shown in Fig. A near the seal face for the purpose of cooling, washing, and lubrication. Examples of flushing are shown in Fig. B and Fig. C.

Flow rate for flushing

Fig. A

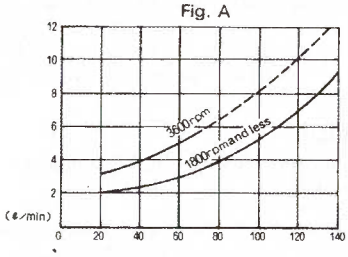


Fig. B

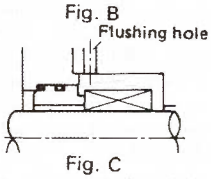

Fig. C

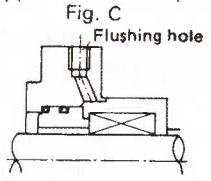


5. Axial movement, run out and squareness of shaft

Table

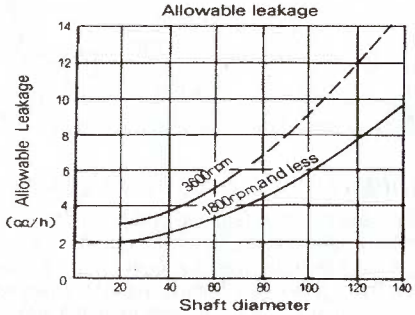
Unit. mm

	Allowable limits
Axial movement	0.5 and under
Shaft run out Squareness	From 20 to 80 include. in shaft diameter "d" not more than $\frac{\sqrt{d}}{120}$ Over 80 to 140 include. not more than 0.075

* d : Shaft or shaft sleeve diameter at the part where the mechanical seal is fixed.

6. Allowable leakage

In using mechanical seals, the allowable leakage during initial operation is shown in the figure in the next page.



Application of Mechanical Seals

Appli-caton	Service	Machine	(MAX) Operating Condition		
			°C Temper-ature	kgf/cm² G Pressure	m/S Velocity
Pump	Sea water	Main cooling sea water pump Ballast pump Sanitary pump Fire & G.S. pump Sea water service pump	Nitrile -20 - 80 Viton 0 - 150	10	20

Guide of how to order

When ordering, please specify the following points:

1. Name of Manufacturer
2. Manufacturer's Model No. & Type
3. Application A. Machine
   B. Service point
4. Size A. Shaft diameter
   B. Outside diameter
   C. Overall length
5. Operating Condition
   A. Temperature
   B. Working pressure
   C. Velocity
6. Matting Face Material
7. etc.

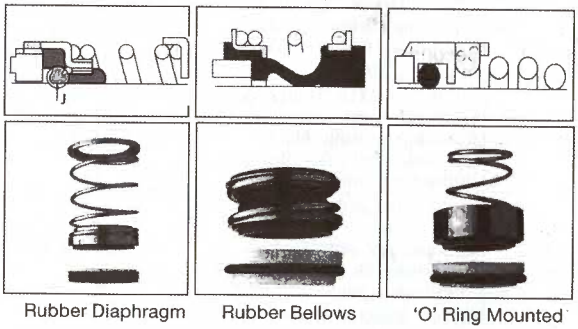
Mechanical Seals
Vulcan Single Spring Seal

The Vulcan single spring seal rage is divided into three main products groups, mainly Rubber Diaphragm, Rubber Bellows and O' Ring Mounted Seals. These single spring mechanical seals have been designed to service the European pump market and are totally inter-changeable, with all other manufacturer's equivalent seals, without any modification to the existing seal housings and gland plates.

Typical design of each of the three product group are:



Rubber Diaphragm | Rubber Bellows | 'O' Ring Mounted

7TH 81

Diaphragm Sealing Operation

The shaft seal is provided by the rubber diaphragm which is squeezed onto the shaft by the drive ring. Once fitted, the rubber diaphragm will grip the shaft giving a strong static seal and very positive drive, via the drive ring, to the seal face.

As there is no relative movement between the shaft and the rubber diaphragm, shaft fretting, wear and hang up hysteresis are eliminated and the seal can immediately accommodate some shaft run-out and misalignment. Shaft axial movement and the movement required during the working life of the seal is handled by the elastomer rubber flexing at its junction point (J on diagram). The seal head automatically adjusts to compensate for face misalignment caused by shaft end float/pump body misalignment.

The spring force and the seal pumping pressure force maintain the faces in full contact whilst the rubber diaphragm acts as a bellows providing sustained flexibility. Positive drive of the seal face is transmitted via the drive ring and retaining housing and not via the spring, which merely provides some closing force to the seal faces. These seals can therefore be used to seal shafts rotating in either direction and in vacuum applications.

Rubber Bellows Sealing Operation

The bellow's high strength and flexibility is the key to the very reliable performance of this seal type as it readily accommodates misalignment, end-float and seal face wear. The convoluted bellows profile makes these seals ideal for media prone to clogging or for hygenic applications. Designed for confined spaces and limited gland depths, Rubber Bellow Seals are bi-directional in operation and provide secure bellows sealing for longer life in a wide range of applications.

'O' Ring Mounted Sealing Operation

These conical spring, 'O' ring mounted, mechanical seals have been designed to have a small cross-section and a complete recessed 'O' ring housing. A narrow seal head width allows the seals to easily fit confined DIN 24960 housings, whilst also providing the benefits of reduced face surface running speed with increased circulation around the seal faces.

The machined recessed 'O' ring groove helps prevent the seal from clogging due to build up of produce around the shaft 'O' ring. Since the spring does not load directly onto the 'O' ring, over-compression of the ring is eliminated. The seal can also accommodate wear by movement along the clean groove area.

Seal drive is provided by the conical spring tightly gripping the shaft at its base. Stock seals are supplied as standard with right-hand drive springs for clockwise shafts. Left-hand springs for anti-clockwise shaft rotation should be specified on order.

The resilient 'O' ring mounted seal design is technically efficient (readily accommodating misalignment and vibration) and is highly versatile. There are a wide range of face material combinations and spring/seal sizes to suit most applications, as well as an extensive range of seals to suit individual pump, mixer, agitator and compressor applications, please contact with your local distributor for further information.

The following table summarize major product's type of Vulcan single spring seal rings for your easy selection.

Vulcan Mechanical Seals

Type	Standard Materials	Shaft Size mm	Shaft Size Inch	Pressure	Speed	Temperature	Application
Rubber Diaphragm							
10 & 20	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	10-100	0.375 -4.000	200 psi	15 m/s	-40 to 200°C	General duties, the industry standard singlespring seal, to UK dimensions.
11 & 22	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	10-100	0.375 -4.000	200 psi	15 m/s	-40 to 200°C	General duties, the industry standard singlespring seal, to USA dimensions.
24	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	10-100	N/A	200 psi	15 m/s	-40 to 200°C	General duties, the industry standard singlespring seal, to DIN24960 dimensions.
Rubber Bellows							
19	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	10-100	N/A	200 psi	12 m/s	-40 to 200°C	General & arduous duties, standard bellows seal to DIN L1 working length.
192	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	10-100	N/A	200 psi	12 m/s	-40 to 200°C	General & arduous duties, standard bellows seal to DIN L1K working length.
193	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	10-100	N/A	200 psi	12 m/s	-40 to 200°C	General & arduous duties, standard bellows seal to DIN L1N working length.
17/24	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	12-100	N/A	up to 40 bar	13 m/s	-40 to 200°C	General & arduous duties, enclosed bellows seal to DIN24960 L1K working length.
18	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	8-70	N/A	90 psi	10 m/s	-20 to 160°C	Compact, enclosed bellows seals for light duties such as water pumps.
'O' Ring Mounted							
8	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	10-80	N/A	150 psi	25 m/s	-40 to 230°C	General and arduous duties. The standard tapered-spring, directional dependant seal.
8 DIN	Body : 304/316 Stainless Steel. Face : Carbon. Secondary Seal : Nitrile. Secondary Spring : 304/316 Stainless steel	10-80	N/A	150 psi	25 m/s	-40 to 230°C	General and arduous duties. The standard tapered-spring, directional dependant seal to DIN24960.
21/31 Seat	Face : 316 stainless. Secondard seal : Nitrile	10-100	0.375 -4.000	-	-	-	General and arduous duties. The UK standard o-ring mounted seal, to provide an o-ring alternative for the type 10,11,20,22 seals. Type 31 is to USA standard.
95	Rotary : Inserted Silicon Carbide in 316SS holder. Stationary : Carbon. Metal parts : SS316. Elastomer : Nitrile	21-120	0.625 -4.000	Vacuum to 10 bar	20 m/s	-50 to 200°C	All duties. The marine standard o-ring mounted seal, to suit the most common marine industry pumps.
96	Rotary : Inserted Silicon Carbide in 316SS holder. Stationary : Carbon. Metal parts : SS316. Elastomer : Nitrile	20-120	0.625 -4.000	Vacuum to 10 bar	20 m/s	-50 to 200°C	All duties. Similar to the type 95 but with additional sleeve in the tail of the rotary spring.

(to be continued)

Type	Standard Materials	Shaft Size mm	Shaft Size Inch	Pressure	Speed	Temperature	Application
97	Rotary : Inserted Silicon Carbide in 316SS holder. Stationary : Carbon. Metal parts : SS316. Elastomer : Nitrile	20-120	0.625 -4.000	Vacuum to 10 bar	20 m/s	-50 to 200°C	Type 95 but with additional grub-screw collar at the bass of the coil.
98	Rotary : Inserted Silicon Carbide in 316SS holder. Stationary : Carbon. Metal parts : SS316. Elastomer : Nitrile	20-130	N/A	Vacuum to 10 bar	20 m/s	-50 to 200°C	All duties. Similar to type 97 but with Japan standard twin o-ring mounted carbon seat.
1677/ 1678	Body : 316 Stainless Steel. Face : Carbon. Stationary : Sintered Silicon Carbide. Secondary Seal : Viton. Secondary Spring : 17-7PH Stainless Steel	18-100	N/A	up to 16 bar	20 m/s	-50 to 220°C	Used on pumps. agitators, mixers and compressors. Standard double wavespring type seal, to DIN24960. Type 1678 is balancad type.
40	Body : 316 Stainless Steel. Face : Carbon. Stationary : Silicon Carbide. Secondary Seal : Viton. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	18-90	0.750 -3.625	up to 30 bar	25 m/s	-30 to 200°C	Industry standard multispring balanced seal for arduous duties. Does not clog due to protected springs and protected dynamic o-ring.
1609	Body : 316 Stainless Steel. Face : Carbon. Secondary Seal : PTFE. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	14-100	0.625 -5.500	up to 24 bar	25 m/s	-100 to 200°C	Multi-spring seal with PTFE secondary seal for arduous duties. Widely used on pumps, agitators, mixers and compressors.
1609S	Body : 316 Stainless Steel. Face : Carbon. Secondary Seal : Viton. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	14-100	0.625 -5.500	up to 24 bar	25 m/s	-100 to 200°C	Multi-spring seal with o-ring secondary seal for arduous duties. Widely used on pumps, agitators, mixers and compressors.
1609B	Body : 316 Stainless Steel. Face : Carbon. Secondary Seal : PTFE. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	14-100	0.625 -5.500	up to 52 bar	25 m/s	-100 to 200°C	Multi-spring balanced seal with PTFE secondary seal for arduous duties. Widely used on pumps, agitators, mixers and compressors.
1609BS	Body : 316 Stainless Steel. Face : Carbon. Secondary Seal : Viton. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	14-100	0.625 -5.500	up to 52 bar	25 m/s	-100 to 200°C	Multi-spring balanced seal with o-ring secondary seal for arduous duties. Widely used on pumps, agitators, mixers and compressors.
1659	Body : 316 Stainless Steel. Face : Carbon. Secondary Seal : PTFE. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	20-100	N/A	up to 17 bar	25 m/s	-50 to 200oC	Multi-spring seal to DIN24960 with PTFE secondary seal for arduous duties. Widely used on pumps, agitators, mixers and compressors.
1659S	Body : 316 Stainless Steel. Face : Carbon. Secondary Seal : Viton. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	20-100	N/A	up to 17 bar	25 m/s	-50 to 200°C	Multi-spring balanced seal to DIN24960 with o-ring secondary seal for arduous duties. Widely used on pumps, agitators, mixers and compressors.
1659B	Body : 316 Stainless Steel. Face : Carbon. Secondary Seal : PTFE. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	20-100	N/A	up to 62 bar	25 m/s	-50 to 200°C	Multi-spring balanced seal to DIN24960 with PTFE secondary seal for arduous duties. Widely used on pumps, agitators, mixers and compressors.
1659BS	Body : 316 Stainless Steel. Face : Carbon. Secondary Seal : Viton. Secondary Spring : Hastelloy C. For use with wide variety of seat styles.	20-100	N/A	up to 62 bar	25 m/s	-60 to 200°C	Multi-spring balanced seal to DIN24960 with o-ring secondary seal for arduous duties. Widely used on pumps, agitators, mixers and compressors.

Non-combustible Divisions

Non-combustible divisions are a material made from silicic acid calcium which neither burns or gives off flammable vapors in sufficient quantity for ignition when heated up to 750°C. All exposed surfaces of a ships bulkheads, linings, and ceilings are required to be covered with this material. The material listed below has a density of 0.65 gm/cm³, which satisfies the requirements for class B divisions according to the 1983 SOLAS regulations.

Heat Insulation Pipe Covers

Rockwool

Rockwool material for insulating pipes from heat and moisture. It is easy to install with slit tube form, and durable with robust molded structure.

Please choice size corresponding to nominal pipe size to be applied and preferable thickness of insulation cover. Service temperature reaches up to 650°C. Standard length is 1,000 mm.

Central Heating Pipe Sections

The central heating pipe sections have a special reinforced aluminium sandwich foil facing. The self sealing tape allows installation under conditions of high relative humidity and temperatures down to -15°C. Length of a section is 1 metre. Maximum service temperature: 250°C . Limiting temperature of outer facing: 80°C.

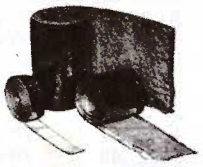
Pipe Insulation Tapes
for High Temperature



Quick and easy way to insulate high temperature surfaces of pipes or valves in vessel engine rooms. For use on bent and flanged pipes in areas where maintenance is not a consideration and/or space is limited. Made from biosoluble vitreous silicate fibre which is reinforced with an outer jacket of heat sealed aliminium foil. Rated for use to 1,000°C max.

Unit Per Rol.

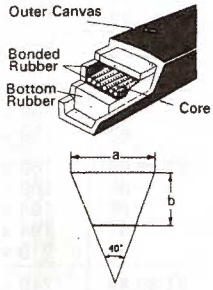
V-Belts
for Power Transmission
(Ref. JIS K 6323 ISO-/R608)

The outstanding properties of the single line cord V-belt are that it has great strength and flexibility while stretching only a minimum amount.



Standard V-Belts

The standard sizes are classified into 6 types : M, A, B, C, D, E with the sizes as shown in the table below.

The length M type is measured by an outside circle, while types A~E are measured by the inside circles of the belt.

Standard V-Belt Section

CODE	JIS		RMA (USA)		BS	
	a	b	a	b	a	b
M	10.0	5.5			9.5	6
A	12.5	9.0	12.7	8.0	13.0	8
B	16.5	11.0	16.7	10.3	17.0	10.5
C	22.0	14.0	22.2	13.5	22.0	13.5
D	31.5	19.0	31.7	19.0	32.0	19.0
E	38.0	25.5	38.0	23.0		

Note: Type D and E are seldom requested for supply and not coded here.

Link V-Belts

By utilising a composite polyurethane and polyester material ensures an extended operational life over rubber based V-belts with high resistance to oil, chemicals, extremes of temperature and abrasive. Ease of fitting, and eliminate routine maintenance. With the unique detachable link construction, the belt can be joined without dismantling. Link V-Belts is available in most standard sections (Z/10, A/13, B/17, C/22, S/25, D/32, E/40 and F/50) on convenient 20 meter boxed reels. Belt to any length can be conveniently made up as required due to the metal stud system. To unfasten, turn stud heads 90°, insert tool and twist. To fasten, snap last link over stud heads and turn heads 90°. Wedge link belt offers significant increase in power on the majority of wedge belt drives.

Rubber Flat Belts

An all purpose rubber belting which gives long, reliable service over a wide range of drives.

Note: Most of the flat belt failures are traceable to pulleys which are too small or belts which are too narrow. A large pully increases the arc of contact and transmits the power more easily. The use of wider belts and larger pulleys, rather than a great number of plies is the best practice to increase power.

Belt Wax

It prevents slipping of V-belt and flat-belts. Available as solid cake or liquid spray type.

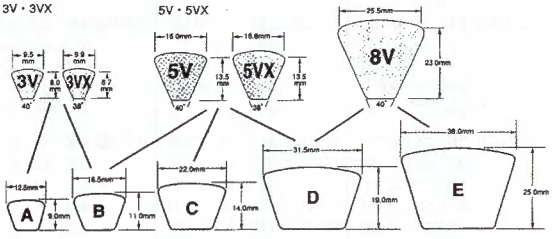
CODE	Wax Contents	Unit
81 46 81	Solid app. 420 grm	Pc.
82	Spray Liquid of 230 cc	Tin

Wedge V-Belts

Compact designed for wedge sheave, and suitable for higher speed and horsepower than standard sheave permit. It is excellent for heat resistance and anti-static property. Available in normal wrapped type or more flexible energy saving "notched type", so please specify the type of wedge V-belt when ordering.

Normal Wrapped Type

Notched Type



How to order: CODE

Watertight E.P.D.M. Rubber Door Packings

Made of E.P.D.M. (Ethylene Propylene Diene Monomer) rubber and used as watertight door packing. Seawater resistance, and maximum temperature -40°C to + 70°C. Colour is black and Standard length : 10mtr.

Tolerations : 18 – 30mm ±1.0mm.
30 – 50mm ± 1.5mm

The list shows standard size, and please ask your local supplier availability for the sizes other than these standard sizes.

Vulcan Packing Products

Valcan No.	Name	For	Fluid	Section Size mm
VC5	Non-Asbestos Braided Packing	For marine and boiler feed applications	-	3.0-25.5
VF4	Stern Gland Packing	For pump and valve glands	Fresh water and sea water	5.0-25.0
VG1D	Non-Asbestos Braided Packing	For ductile valves and stainless valves	Steam, water, oils, air, alkalis, mild acids and chemiclas	3.0-25.5
VG1D	Non-Asbestos Braided Packing	For high temperature and high pressure valves	Steam, water, oils, air, alkalis, mild acids and chemicals	3.0-25.5
VGC-106	Super Heat Packing	For high temperature and high pressure valves	Steam, water, solvents, petroleum distillates and hot oils	3.0-25.5
VGC206	General Purpose Graphite Cotton Packing	For sealing stern glands, pump and valves	Water, sewage, solvents, oils fats and abrasive solutions	3.0-25.4
VK4	Special Aramid Fibre Packing	For rotary and reciprocating pumps, stern glands, hydraulic presses, mixers and valves	Abrasive slurries, sewage, effluents, water, oils solvents and all bar the most aggresive chemicals	3.0-25.5
VK4B	Non-Asbestos Aramid Fibre Packing	For pumps(rotary and reciprocating)and valves	Oil, water, alkalis solvent and any acid except for sulfuric acid and nitric acid	3.0-25.5
VK5	Non-Asbestos Hybrid Packing	All rotary reciprocating and static gland applications	Oil, water, alkalis solvent and any acid except for sulfuric acid and nitric acid	6.5-25.0

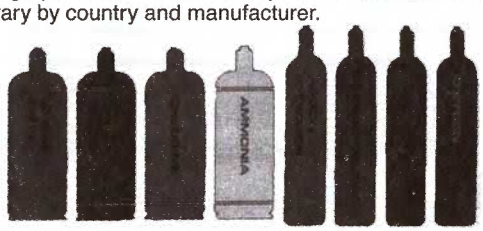
High Pressure Gases

Gases are obtainable packed in cylinders or empty cylinders from a vessel can be refilled for use. The most commonly required gases for marine use are listed below. When ordering, please specify the type of gas required. Charges for cylinder rental or gas refills are applied separately and the guidelines regarding what type of valves are used on the cylinders, how frequently the cylinders must undergo pressure tests, and if cylinders can be exchanged will vary by country and manufacturer.



CODE	Gas Name	Gas Symbol	Unit	Standard Cylinder
85 01 02	Oxygen	O_2	M³	6.7 M³
04	Acetylene	C_2H_{22}	kgs	6.8 ~ 7.8 kgs
09	HFC-134a	CH_2FCF_3	"	10, 20, 100 kgs
10	R-404A	(*)	"	10, 20, 100 kgs
11	R-407C	(**)	"	10, 20, 100 kgs
85 01 12	Propane	C_3H_8	kgs	10, 20, 50 kgs
14	Carbon Dioxide	CO_2	"	30 kgs
16	Helium	He	M³	7 M³
18	Argon	Ar	"	7 M³
20	Hydrogen	H_2	"	7 M³
85 01 22	Nitrogen	N_2	M³	7 M³
24	Ammonia	NH_3	kgs	50 kgs

Remark (*) : R-404A is mixture gas of HFC-125 / 143a / 134a (**): R-407C is mixture gas of R32 / R125 / R134a

Note: The refill of an empty cylinder is under strict control by the high pressure gas control safety law of most countries. Consequently, it takes a long time for the refill procedure. To avoid this slow process, cylinder rental systems are also available in certain countries.

Information regarding the use of refrigerant gases

In accordance with the IMO resolution A. 719 (17) regarding CFCs we would like shipyards and ship owners to take note of the current regulations in place on the design of refrigerant systems and proposals for the future restriction of refrigerant gases.

The resolution states as follows:

1. The use of CFCs whose ozone depleting potential is higher than 5 % of R-11 in installations of fixed refrigeration and air conditioning plants and insulation shall be prohibited on ships of which the keel is laid or which are at a similar stage of construction on or after 6 November, 1992.
2. The use of CFCs in such new installations on other ships shall be prohibited by 6 November, 1992.

In regards to the use of refrigerant gases, CFC refrigerants above grade CFC 11(R-11) has been banned from use from the year 1996. Furthermore, the alternative refrigerant HCFC 22(R-22) has been totally banned in EU since 2015. Starting from 1st January 2020, virgin R-22 will be banned in non-article 5 parties (Montreal Protocol) such as Japan, Australia and USA. The other alternative refrigerants such as R-404A (mixture gas of HFC-125/143a/134a) and R-507 (mixture gas of HFC-125/143a) and R-422D (mixture of R-125/134a/600) will also be banned in EU from 1st January. 2020.

The Montreal Protocol stipulates 100% phaseout of the production of CFCs, which is the most common ozon-depleting refrigerants such as CFC-12, R-502 and HCFC-22, by January 1, 1996.

HFCs are environmentally superior to CFCs because HFC does not contain chlorine.

We also include alternative gases from this edition as environmentally friendly refrigerants which enable to make direct replacement of CFCs.

CFC denotes Chlorofluorocarbon.
HFC denotes Hydro fluorocarbon.
HCFC denotes Hydro chlorofluorocarbon.

Refrigerant Gases

As alternative for CFC Refrigerants

Due to the ozone depleting issues, environmentally friendly maritime refrigerant is required for use in various cooling system. Here is the reference of quality assured refrigerants to the highest purity standards (ARI-700), covers wide range of marine refrigeration requirements.

CODE	Name	Unit	Application
85 01 25	Hycool Marine 45	kgs	A cost efficient and environmentally friendly secondary refrigerant for use in indirect cooling systems. It is based on the organic salt Potassium Formate. Biodegradable and has neither Ozone Depleting Potential nor Global Warming Potential, Non-flammable and non-toxic. and Wide application range +50 ' to -45°C, can be used in freezing, cooling and heating applications.
26	Same, supplied in can (25L)	25 L	
85 01 27	Unicool R-407F	kgs	A synthetic HFC refrigerant, used in a variety of maritime refrigeration applications such as high, medium and low temperature applications. **NOTE: Recommended direct replacement for R-404A (fully compatible).**
28	Same, supplied in 12L cylinder	11 kgs	
29	Same, supplied in 56L cylinder	51 kgs	
85 01 30	Unicool R-410A	kgs	A synthetic HFC refrigerant, used in a variety of maritime refrigeration applications such as high, medium and low temperature applications.
34	Same, supplied in 12L cylinder	9.5 kgs	
38	Same, supplied in 56L cylinder	45 kgs	
85 01 39	Unicool R-417A	kgs	A synthetic HFC refrigerant for replacing R-22 in existing refrigeration systems for low, medium and high temperature applications. **NOTE: Recommended drop-in retrofit replacement for R-22.**
40	Same, supplied in 12L cylinder	11 kgs	
47	Same, supplied in 56L cylinder	51 kgs	
85 01 48	Unicool R-422D	kgs	A synthetic HFC refrigerant for replacing R-22 in existing refrigeration systems for low and medium temperature application. **NOTE: Virgin R-422D will be banned in EU from 1st Jan 2020.**
49	Same, supplied in 56L cylinder	52 kgs	
85 01 50	Unicool R-507	kgs	A synthetic HFC refrigerant, used in a variety of maritime refrigeration applications such as low and medium temperature applications. **NOTE: Virgin R-507 will be banned in EU from 1st Jan 2020.**
98	Same, supplied in 12L cylinder	9.5 kgs	
99	Same, supplied in 56L cylinder	45 kgs

Seamless High Pressure Gas Cylinders

for Oxygen, Nitrogen, Hydrogen, Helium, etc.

Made of seamless mangan steel complete with valve and cap for use with various gases such as Oxygen(O_2), Nitrogen(N_2), Hydrogen(H_2), Helium(He), etc.

When ordering, please specify the name of the gas to be filled for safety's sake. Their specifications are as follows:

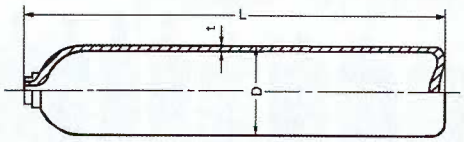
High Pressure Gas Cylinders

There are a great variety of compressed gas cylinder standards. To avoid dangerous accidents, most countries have their own strict regulations governing the making, refilling and testing procedures of these high pressure gas cylinders. The table in the next page summarizes the abstract details of the popular cylinders of various countries.

In case of refilling, a certain country may require the certificates of the cylinders.



1. American Specifications : DOT 3AA (CTC in Canada)

Span (Calibration) Gases

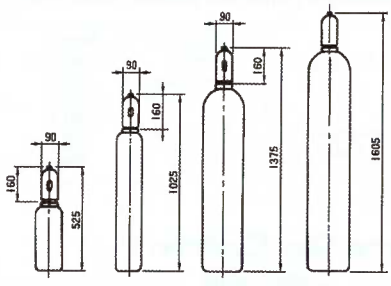
Several kinds of gases are available for calibrating gas analyzers. These gases are called Span Gas or Calibration Gas.

For combustible gas detection, two major methods are widely and commonly used in marine applications, one is the non-dispersive infrared absorption principle (Nitrogen Balance) and the other is the catalytic combustion principle (Air Balance).

The specifications of the gases for use on the calibration of the analyzers utilizing the above two principles are as follows.

No.	Mixing Ratio	Name of Gas Mixed	Main Component
C-0	Zero Gas		
D-0	100%		N_2 (Nitrogen)
C-1	Span Gas		
D-1	Approx. 2%	O_2 (Oxygen)	N_2 (Nitrogen)
D-2	" 3%	CH_4 (Methane)	"
D-3	" 4.3%		"
D-4	" 5%		"
D-5	" 1.5%		Air
D-9	Others ... Please specify the components and concentration.		

For containing the above gases, there are several gas cylinders and regulators. They are as follows:



No.	Volume Ltr	Pressure Kgf/cm²		Size mm		Weight kgs
		Filling	Test	Length	Dia.	
B-0	3.4	100	250	525	140	6.0
1	10	150		1,025	140	14
2	40	150		1,375	232	50
3	47	150		1,605	232	65

When ordering gases and cylinder (if required), please fill the following column.

How to order : 85 - 01 - 84

Span gas, with following information:

Order No. A B C D

(A) With or Without cylinder
0 - Gas only
1 - Gas with cylinder

(B) Cylinder Volume
B - 0, 1, 2, 3

(C) Use
0 - Zero Gas
1 - Span Gas

(D) Kinds of Gas
D-0, 1, 2, 3, 4, 5, 9

Order No. A 1 B 2 C 1 D 3 means

Span gas, 4.3 % CH_4 in N_2 with 40 ltr/cylinder.

Note:
1. In case (A) is 0, the refilling gas cylinder should be attached with the certificate if issued previously.
2. The combustible gas balanced by air which is over 30 % of LEL (Lower Explosive Limit) can't be supplied/refilled.

Span Gases

Span Gas for all types of gas detectors and analyzer. To help comply with standards, various types of calibration gas cylinders are available for your usage.

The most important accessory to any gas detector is a calibration kit, which provides the means to determine if the instrument is working properly. When using gas detection equipment, it is necessary to calibrate the equipment on a regular basis to guarantee accurate results. According to some regulations and standards, one must test the gas detector prior to each use with a suitable test gas.

Can Specifications

Name of Mfr. : Atlas Marine Services Pte. Ltd.

Regulators and Accessories

Fixed Flow Regulators for 34 ltr, 58 ltr, and 110 ltr

Available for portable detectors with no pump or hand pump, also ideal for fixed head detectors. Flow rate 0.3 litres/minute, 0.5 litres/minute or 1.0 litres/minute.

Unit Per Pc

CODE	Flow Rate	CODE	Flow Rate
85 15 93 94	0.3 ltr/min 0.5 ltr/mn	85 15 95	1.0 ltr/min

Demand Flow Regulators for 34 ltr, 58 ltr and 110 ltr

Special designed for gas detectors with built-in electric sample pump. Important gas is supplied at "Sample pump" normal working flow rate, hence ensures testing and calibration are similar to true operation conditions.

85 15 96	Regulator, demand flow, for 34 ltr, 58 ltr and 110 ltr	Pc.

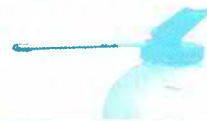
20 ltr Cylinder Regulators

Designed for 20 litre can's of gases to provide varying from 0.25 to 1.5 litre/min

85 15 97	Regulator for 20 ltr cylinder	Pc.

Spray Nozzles for quick testing, bump testing or filling sample bags

For use with 20ltr cans only.



85 15 98	Spray nozzle for quick testing, bump testing or filling sample bags	Pc.

Gas Sample Bags with Clip Valve

Sample bags are available too for use with fixed equipment or pumped instrument.

85 15 99	Gas sample bag with clip valve	Pc.

Germany	DIN 477	27.8 mm-14T.P.I.	W 21.8 mm

Oxygen & Acetylene Gas Cylinder Regulators

Single stage with easy to read 60 mm gauges. For general welding and cutting, these regulators feature greater flow and accuracy, more economy, simple repairs

and greater safety.

Oxygen regulators have two types of male and female inlet threads.

Oxygen Regulator with Male Thread

Oxygen Regulator with Female Thread

Rubber Acetylene Hose
Molded & Braided Construction

For acetylene welding equipment. Lightweight, extremely flexible and practically non-kinkable. Furnished in red colour to be distinguished as an acetylene line.

Unit Per Mtr.

Rubber Twin Welding Hose
Molded & Braided Construction

One piece, two line welding hose, securely joined together to prevent tangling and increase flexibility. One line is red and the other is black to facilitate the welding operation. Usually supplied in 100 mtr coils. This hose is lightweight and easy to move about, reducing operator fatigue to a minimum.

Unit Per Mtr.

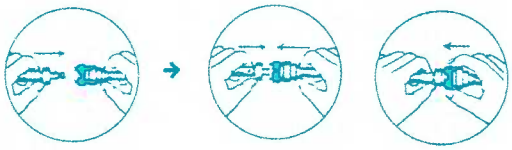
Automatic Reverse-flow Prevention Couplings

These couplings are fitted to the outlet pipe, connecting hose, and the welding/cutting machine and outfit, removing possible risks accompanying the gas welding/cutting operation and making preparation and maintenance of the welding/cutting machines easy.

Further, each type is specially designed for oxygen or fuel gas so as to prevent mistakes.

A spring-loaded locking method is used, fitting or removal is a single action, which minimizes hose damage and makes maintenance easy.



For Hose to Hose Connections

Quick Couplers
for Welding Equipment Piping

Especially for welding equipment piping with excellent durability and corrosion resistance. All piping connections from cylinder to torch can be associated with welding equipment by one touch operations. Body is chrome plated for better corrosion resistance, and plug is hardened for better durability. Oxygen and fuel gas fittings are different sizes and sleeves are given different colours, chrome plating for oxygen and copper plating for fuel gas, to prevent accidental interconnection. No oxygen types (1/4" and 5/16") can be connected to fuel gas types (5/16" and 3/8"). However, respective types of the connection , oxygen plugs and sockets are interchangeable and fuel gas plugs and sockets are interchangeable.

Specification

Body Material	Socket Brass (Chrome-plated), Plug: Steel (Chrome-plated)
Size	1/4", 5/16", 3/8"
Working Pressure MPa (kgf/cm^2)	0.7 (7)
Pressure Resistance MPa (kgf/cm^2)	1.0 (10)
Packing Material	NBR (Nitrile Butadiene Rubber)
Working Temperature Range	-20°C - +80°C

Max. Tightening Torque

Coated Brass Brazing Filler Metal

This is a machine coated, wire drawn brass rod, made from special elements. These coated filler rods have the advantages of low flaming, fine deposits, increased tensile strength, easy and speedy operations.

Characteristic of Deposit Metal

Tensile Strength for All Deposit	36 - 43 kgf/cm²
Elongation (7d)	24 - 32%
Impact Strength	5-6 kgf/cm²
Hardness	90 - 95 HB
Sticking Strength on Steel	30 - 40 kgf/cm²
Sticking Strength on	Equal or up to Mother Metal

Applications:

Repair of cast iron assemblies, welding of dissimilar metals (steel and iron, copper and brass, iron and copper, etc.) assembly of steel plate and steel sheets.

Unit Per Pkt.

Flux Coated Silver Solder

Flux coated silver brazing type alloy for joining all ferrous and copper metals, stainless steel, nickel and its alloys, steel castings, malleable and cast iron, tungsten carbides, etc. Suitable for most close-fitting joint designs, rapid application with minimum joint preparation. It is cadmium free, has high fluidity with good capillary flow.

Specifications

Main Component	Ag (60%), Cu, Zn, Sn
Melting Temp. C	620° - 650°
Tensile Strength	60 kg/mm²
Hardness	B 95
Wire Length	450 mm
Package	500 grm/pkt

For Welding of Mild Steel					
85 13 55 56 57	TBI -24	2.6 3.2 4.0	350 350 400	5.0	Iron powder lime-titania type electrode for mild steel.
For Welding of Cast Iron					
85 13 61 62	CIA-1	3.2 4.0	300 350	2.0	Covered electrode with graphite type coating flux and pure nickel core rod.
85 13 65 66 67	CIA-2	2.6 3.2 4.0	300 300 350	2.0	Covered electrode with graphite type coating flux and 55% Ni-Fe alloy core rod.
For Stainless Steel (SUS-304)					
85 13 71 72 73 74	NC-38	2.0 2.6 3.2 4.0	250 300 350 350	2.0 5.0	Lime-titania type electrodes, especially excellent with better crack resistibility.
For Stainless Steel (SUS-309S)					
85 13 75 76 77 78	NC-39	2.0 2.6 3.2 4.0	250 300 350 350	2.0 5.0	Lime-titania type electrodes, providing good corrosion resistibility and good heat resistibility.
For Stainless Steel (SUS-310S)					
85 13 82 83 84	NC-30	2.6 3.2 4.0	250 300 350	2.0	Excellent in heat resistance, corrosion resistance and mechanical properties due to stable full-austenitic microstructure.
For Stainless Steel (SUS-316L)					
85 13 85 86 87 88	NC -36L	2.0 2.6 3.2 4.0	250 300 350 350	2.0 5.0	Lime-titania type electrodes and the intergranular corrosion resistibility is superior due to lower carbon content.
For Welding of 1.25%Cr-0.5%Mo Steel					
85 13 91 92 93	CMA -96	2.6 3.2 4.0	300 350 400	5.0	Low hydrogen type electrodes for all-position welding and the alloy elements are supplied from the core rod.
For Mild Steel and 50 kgf/mm² HT Steel (Tig Welding)					
85 14 01 02 03 04	Familiark TG -S50	1.6 2.0 2.4 3.2	1,000	5.0	For welding of mild steel, 50 kgf/mm² high tensile steel, and alminium-killed steel for low temperature use.
For Stainless Steel (Tig Welding)					
85 14 05 06 07 08	TGS -308	1.6 2.0 2.4 3.2	1,000	5.0	For welding of 18%Cr-8%Ni stainless steel (SUS-304)

Atlantic Products

Unit Per Pkt

CODE	Brand	Size mm D	Size mm L	Kgs per Packet	Features
For Mild Steel					
	CHE 422	2.5 3.2 4.0	300 350 350	5 kgs/ pkt	Titanium calcium carbon steel electrode, alternating current /direct-current, can be used to weld common carbon steel structure and low-intensity alloy steel.
	CHE 506	2.5 3.2 4.0 5.0 5.8	300 350 400 400 400	5 kgs/ pkt	Low Hydro-potassium coating electrode, with good plasticity, toughness and crack resistance, can be used to weld carbon steel and low-intensity alloy steel, marine steel (grade A, B, D, E), main structures of cars, buildings and bridges

(to be continued)

CODE	Brand	Size mm D	Size mm L	Kgs per Packet	Features
For 50 kgf/mm² High Tensile Strength Steel					
85 16 11 12 13 14	CHE 508	2.5 3.2 4.0 5.0	300 350 400 400	5 kgs/ pkt	Iron powder low hydro- potassium coating electrode, alternating current / direct-current, with good plasticity, toughness and crack resistance, can be used to weld carbon steel and low-intensity alloy steel, important structures in marine steel (grade A, B, D, E).
For Atmospheric Corrosion Resisting Steel					
85 16 15 16 17	CHE 506 NiLH	3.2 4.0 5.0	350 400 400	5 kgs/ pkt	Ultra-low Hydro-potassium coating low-intensity alloy steel electrode, alternating current / direct-current, can be used to weld important production platforms, ships and high pressure vessels in carbon steel and low alloy steel.
For Cast Iron					
85 16 21 22 23	CHC 308	2.5 3.2 4.0	290 340 340	1 kgs/ pkt	Pure nickel core welding-wire graphite coating cast iron electrode, alternating current / direct-current, can be used to weld thin cast iron units such as cylinder heads engine bearer gear cases.
85 16 25 26 27	CHC 408	2.5 3.2 4.0	290 340 340	1 kgs/ pkt	Ferro-nickel core welding-wire strong reducing property graphite coating cast iron electrode, with high strength, good plasticity and low coefficient of linear expansion, can be used weld high strength cast irons such as cylinders, engine bearers, gears.
For Stainless Steel					
85 16 31 32 33 34 35	CHS 312	2.0 2.5 3.2 4.0 5.0	300 300 350 400 400	2 kgs/ pkt	Titanium calcium stainless steel electrode, containing molybdenum, with good corrosion resistance, crack resistance, resistance to oxidation, alternating current/ direct-current, can be used to weld s.s. containers.
85 16 36 37 38 39 40	CHS 402	2.0 2.5 3.2 4.0 5.0	250 250 300 350 350	2 kgs/ pkt	Titanium calcium austenitic stainless steel electrode, has good resistance to oxidation in 900-1 100 C high temperature, alternating current / direct-current, can be used to weld resist heat stainless steel.
85 16 41 42 43 44 45	CHS 022 (022R)	2.0 2.5 3.2 4.0 5.0	300 300 350 400 400	2 kgs/ pkt	Titanium calcium ultra-low carbon stainless steel electrode, carbon content≤0.04%, with good corrosion resistance, crack resistance, heat resistance, alternating current /direct-current, can be used to weld area synthetic fibre and stainless steel.
85 16 46 47 48 49	CHH 308	2.5 3.2 4.0 5.0	300 350 400 400	5 kgs/ pkt	Iron powder Low Hydro-potassium low alloy electrode, alternating current/ direct-current, can be used to weld low alloy steel in 1% chromium and 0.5% molybdenum below 510 C.
For Hardfacing					
85 16 51 52	CHS 29.9	4.0 5.0	400 400	2 kgs/ pkt	Titanium calcium stainless steel electrode, containing 40% iron, alternating current/ direct-current, can be used to weld high carbon steel, tool steel and heterogeneity metal

(to be continued)

For Nickel, Nickel-alloy and Nickel-alloy Steel					
85 16 55 **56**	CHN 337	3.2 4.0	300 350	2 kgs/ pkt	Low Hydr-Ni70Cr15 heat resisting alloy electrode, containing a little manganese niobium alloy element, having good crack resistance, reversed polarity direct current, can be use to weld nickel-base alloy, heterogeneity steel.

Storage Containers for Welding Rod

A waterproof yellow coloured storage containers for welding rods of 350 mm or 450 mm with carrying strap. A diamond shape to prevent the canister from rolling off a work surface. The cap is sealed with a pressure fitted O-ring to prevent intrusion of moisture and contaminants.

Unit Per Pc.

Ovens for Welding Rod

A portable ovens ensure electrodes remain moisture-free in the field and meet welding code requirements. The ovens include a thermostat to adjust oven temperature in line with electrode requirements. The Type 5 is available with wheels and a pull handle or with carry handles.

Type 2

Type 5

- Storage capacity for 14" or 18" electrodes.
- Rod elevator for quick removal of electrodes.
- Adjustable thermostat provides temperature (from 38-149°C) control in the field.
- Safety Yellow colour increases field visibility.
- New 120/240V dual volt heating elements.

Standards :

Electrode Conversion Table

Products from a few manufacturers are listed in the next page for your reference. If there is some question as to what types are most suitable, please ask for further information or brochures from the local manufacturers when ordering.

When ordering electrodes, the following information will be required:

1. The composition on the metals to be connected.
2. The type of joints being welded.
3. The position of welding.
4. The type of welding power source available.
5. The requirements of the welded joint, strength, appearance, corrosion resistance, the way the weld assembly will be used.
6. The types and, to some extent, the sizes of electrodes.
7. CODE NO.
8. Type
9. Manufacturer's name and product type.
10. Required quantity in kgs.

Remark: When ordering the products which are not from Shinko, Nittetsu or Atlantic, please use the code number 85 09 --- which are specified in the left column

Gouging Electrodes

Made of carbon and have a copper coating. The gouging electrodes are available in a variety of shapes and diameters to meet the various applications.

Power source 380V, DC, compactness 1.57; max. humidity < 0.4%.

Direct Current Pointed Gouging Electrodes

Unit Per Pc

CODE	Size (mm/inch)		Ampere
85 09 66	4 x 305	5/32" x 12"	150 – 200
67	5 x 305	3/16' x 12"	200 – 250
68	6.3 x 305	1/4" x 12"	250 – 300

72	13 x 355	1/2" x 14"	600 – 700

Direct Current Jointed Gouging Electrodes

For intensive applications jointed electrodes are available. These can be put into each other to increase the duty cycle.

Unit Per Pc

CODE	Size (mm/inch)		Ampere
85 09 73	8 x 355	5/16" x 14"	450
74	10 x 355	3/8" x 14"	500
75	11 x 355	7/16" x 14"	600
76	13 x 355	1/2" x 14"	750

80	13 x 430	1/2" x 17"	750
81	16 x 430	5/8" x 17"	1,000
82	19 x 430	3/4" x 17"	1,300

Direct Current Flat Gouging Electrodes

85 09 83	Electrode, DC, flat gouging, 5 x 15 x 305 mm, 300-400 amp.	Pc.

Gouging Torches

The airflow can be regulated on the torch. The adjustable nozzle and the use of high quality materials ensure optimal electric safety and efficiency and maximum airflow. The mono cable can be mounted easily to the torch and the power source. Recommended air pressure is 7 bar.

Unit Per Pc.

CODE	Ampere	Max. Electrode
85 09 84	600	10 mm (3/8")
85	1,600	19 mm (3/4")

Monocables
for Gouging Torch

Gouging with the support of a monocable is a very efficient and handy way to operate. Both the power and the air are guided through one cable, which allows the gouger to work. Length: 2.35 mtr.

Unit Per Lgh.

CODE	Ampere	Cable Size
85 09 86	600	35 mm²
87	1,600	95 mm²

Gouging Torch & Monocable Sets

Complete sets allow you to start gouging immediately and saves the costs of putting the set together. Total length 2.5 mtr.

Unit Per Lgh.

CODE	Ampere	Cable Size
85 09 88	600	35 mm²
89	1,600	95 mm²

Welding Cables
Butyle Rubber Sheathed
1,000V or less-Single Conductor

Welding cable for general use. Cloth or paper wrapped wire sealed in rubber sheath. Furnished 200 mtrs per coil.

Unit Per Mtr

CODE	mm²	Strand O.D. mm	Cable O.D. mm	Cable Construction mm	Kgs Per mtr
79 41 01	22	7.0	11.8	0.45 x 20 x 7	0.31

79 41 06	200	21.2	29.0	0.45 x 34 x 37	2.3

Welding Cable Connectors

Brass bar with interior and exterior covered in watertight rubber. Specially designed for welding cable connections.

Unit Per Pr.

CODE	Capacity Amp	Cable Size mm²	Length mm.	Weight grm.
79 47 61	300	38 - 50	200	300
62	500	60 - 80	295	510
63	750	100 - 125	275	750
64	1,000	150 - 200	300	950

Electrode Holders

Closed Head

A high quality closed head electrode holder with optimal insulation and powerful grip on the electrodes. Also be used for overhead welding, and electrodes can be inserted in various manners. Standards : EN 60974-11.

Unit Per Pc.

CODE	Amp	Electrode Size mm	Connection	Cable mm²
85 10 24	300	1.6 - 6.3	1 screw M12	25-70
25	400	2.5 - 8.0	1 screw 9/16"	25-95

27	600	2.5 - 8.0	2 screws 9/16"	25-95

Open Crocodile Type Head (Grip Type)

An open crocodile type head electrode holder with many and firm electrode holding insert positions for wide range of welding applications.

Standard: EN 60974-11.

Unit Per Pc.

CODE	Amp	Electrode Size mm	Connection	Cable mm²
85 10 31	200	2.0 - 5.0	-	-
32	300	2.0 - 6.3	1 screw M12	25-70

Arc Welders

Shielded metal arc welding (Stick electrode welding) is most broadly used in shipboard maintenance and repair welding.

In welding two pieces of metal together, an electric arc is established the end of the coated electrode and the base metal in the joint.

When the electric arc is struck between the tip of the electrode and the work piece (Base metal), molten droplets from the electrode are transferred to and mixed with the molten metal in the joint. As the arc progresses along the joint the molten weld metal cools and solidities forming a strong, integral bond in the joint.

Arc welder converts shipboard power – usually 220, 380 or 440 volts, alternating currents (AC) to an output in the form of AC (Transformer) or DC (Rectifier) current.

Typical welding currents may range from 30 to 400 amperes at voltage of 22 to 32 volts.

Most electrodes used for shipboard maintenance welding operate at less than 200 amperes. So a current output of 400 amperes will suffice for most carbon arc applications.

The output AC/DC type will be more flexible and better suited to a wide range of conditions.

Please specify the following points when ordering:

1. Type of welder required;
   1) Transformer (AC)
   2) Rectifier (DC)
   3) Transformer/Rectifier (AC/DC)
2. Main supply: Voltage and Frequency
3. Maximum output capacity: Current amperes

Tig Welders

Tig (Tungsten Inert Gas) welding is an arc welding process that uses a non-consumable tungsten electrode to produce the arc, and used for critical weld joints, welding metals, such as aluminium, stainless steel, copper, brass, titanium, nickel, even two dissimilar metals, other than common steel, and where precise, small welds are needed. Tig welding requires a shielding gas to protect the weld area from the air (typically pure Argon gas), and utilizes a constant current welding power supply to generate an electric arc between the tungsten electrode and the workpiece, using the resultant heat to create the weld. The pulse function is used for giving a more stable arc than not pulsing. This allows for welding thinner metals and high heat conductive metals without burning through.

Unit Per Set

CODE		85 10 75	
Model		300P	
Pulse Function		With Pulse	
Input Voltage		1 phase/200 volt

Plasma Cutting Machines

The plasma cutting process, as the most cost-effective method of cutting a range of materials, is especially recommended for steel, stainless steel, aluminium or other alloys those are electrically conductive, not easily cut by conventional oxy-acetylene process. The combined effect of a high intensity arc and a hot, high velocity plasma gas results in a very clean, high speed cut including piercing, beveling and gouging.

Please specify if air compressor built-in model is required, when ordering.

Cutting Capacity of Plate Thickness

Safety Spectacles
with Interchangeable Lenses

Safety spectacles with different interchangeable lenses, supplied as a set. Set consists of: glasses frame, lenses: white/smoke/amber, clip cord, lens cloth and storage case. Lenses and frame made from reinforced polycarbonate. Lightweight and very comfortable frame with soft rubbers on the arms. Also comes with rubber nose pads that prevent the glasses from slipping off. Fits all contours of the head and face. Weight: 27 grams.

Standards: EN166:2001 FT

85 11 15	Spectacle, safety, with interchangeable lenses	Set

Welding Helmets

Helmet with headgear for general welding use. Made of fibre glass, lightweight, and heat-resistant.

85 11 16	Welding helmet with headgear	Pc.

Arc Flash Protective Visors
for Electricians

V-Gard Electrician's Visors provide reliable protection from arc flash effects: high temperature, flying debris and powerful radiation. They are certified to the highest European arc flash protection levels by the standards GS-ET-29 [class 2, 7 kA] and EN166 [8]. The impact and splash resistance is certified to EN 166 [B & 3].

Made from a patented injection molded blend of dyes and nano particles in a polycarbonate matrix. They absorb the arc energy layer by layer. This blend of dyes makes the visor look light green but offers the highest visual light transmission available in GS-ET-29 [VLT Class 0] providing maximum light transmittance and color recognition. As moldings they are optically correct, which ensure the best vision and reduced eye fatigue.

Two versions are available:
- Compatible with helmet mounted earmuffs.
- With extended ear protective shape, covering the ears.

Both feature an anti-fog coating for a clear view in challenging situations.

85 11 17	Visor, arc flash protective, compatible with helmet mounted earmuffs	Pc.
85 11 18	Visor, arc flash protective, with extended ear protective shape, covering the ears

Anti Spatter Sprays

Prevents welding spatters from sticking to the welding torch or to the workpiece. Contains no harmful or flammable detergents. Offers the perfect solution to stainless steel.
- Resistant up to 1,500°C.
- Ideal for welding torches and automatic machines.

85 11 76	Anti spatter spray, 500 ml	Can

Water-Based Weld Anti-Spatters

A water-based spatter release agent which gives exceptional results without the use of harmful solvents, silicones or mineral oils.

85 11 77	Weld anti-spatter. water based CRC Ambersil, Bioweld, 400 ml	Tin

Aluminium Backing Tapes

An aluminium backing tape with fiberglass center.

Benefits:

- Reduces setup time.
- Eliminates/minimizes need for back purging.
- Reduces post-weld grinding.
- Cuts down on post-weld clean up.
- Increases weld productivity, reduces costs.
- Heat resistant (Adhesive 260°C, Aluminium tape 593°C, Fiberglass strip 550°C).
- For application up to 500/600 Amps.

Unit Per Rol.

IMPA online Education

Dedicated Marine Purchasing and Supply education programme

Education remains a key priority for IMPA and the association has **introduced the most comprehensive education programme in its history.** The intention is that IMPA's online course will provide procurement and supply chain management professionals with the credibility and status that other professional disciplines enjoy.

Each course has been designed to be taken over a 12 month period and entirely on-line. IMPA members receive a discount on course fees.

Created by the industry for the industry

The first of its kind and available to all - 100% online!

Main Engine Diagrams

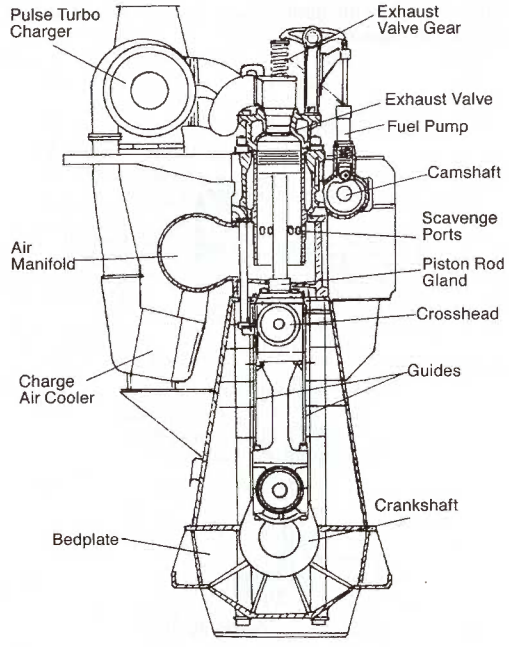
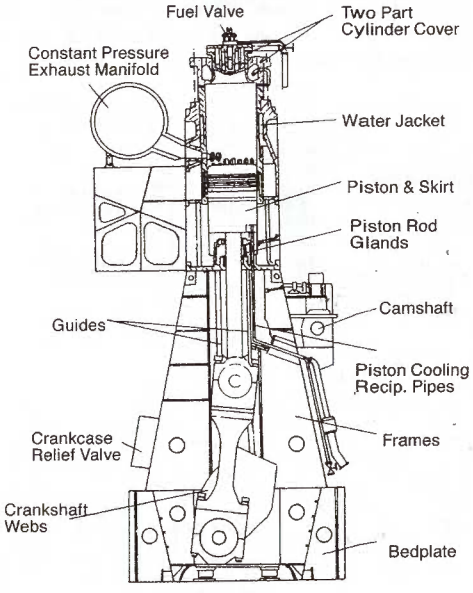
There are various types of main engine with a range of cylinder sizes from various manufacturers in the world. Basically, marine diesel engines can be divided into two main types; Large, slow-running direct drive engines with limited numbers of cylinders (Two-stroke cycle), or Medium to high speed engine driving through reduction gears (Four-stroke cycle).

Below are shown basic cross sections of common two-stroke cycle engines as a reference. Two-stroke engines are commonly used as the main engine for oil tankers, bulk carriers, or container vessels which must carry a large payload. Four-stroke engines are commonly used of car carriers, Ro-Ro vessels and ferries where a low set, medium speed engine is preferable to allow space for additional car deck space or accommodations above the engine room.



MAN – B & W KEF Engine



SULZER RND Engine

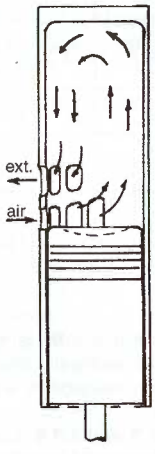
87

The Basic Method of Scavenging within the Cylinder

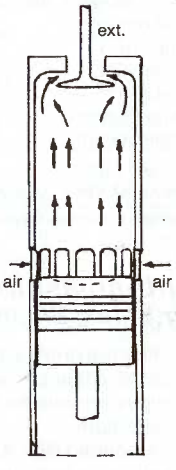
Loop Scavenge:

Air passes over the piston crown and rises to form a loop within the cylinder, expelling gas through exhaust ports cut in the same side of the liner above the scavenge ports.

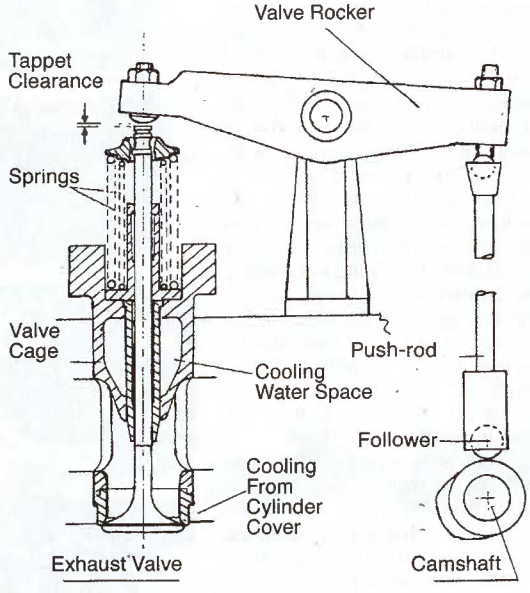


Uniflow Scavenge:

Air passes straight up through the length of the cylinder, forcing the exhaust through ports or valves at the top of the cylinder.



Exhaust Valves and Tappets

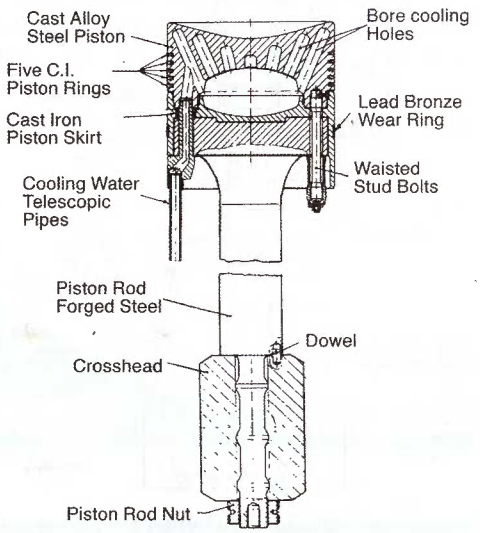


Large Two-stroke Engine Pistons

Cooling of pistons is necessary to remove excess heat from combustion and to limit thermal stressing. It also limits thermal expansion to maintain correct clearances between piston and liner and between ring grooves and rings. Cooling may be carried out by circulating either water or oil.

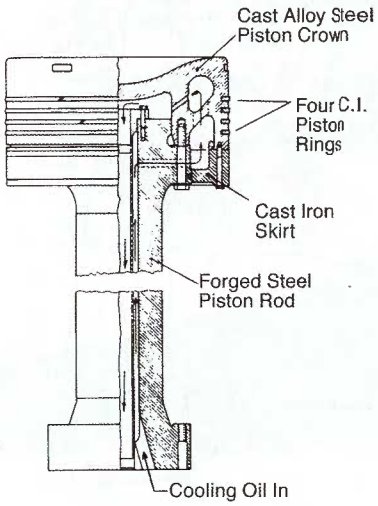
Fresh Water Cooling Piston :

Fresh water cooling has the advantage of greater thermal capacity than oil ; it may also sustain higher outlet temperatures (up to 70°C) improving thermal efficiency. Water cooling has the disadvantage that flexible connections and glands to convey it to and from the piston require maintenance and there is the possibility of crankcase contamination from gland leakage.



Oil Cooling Piston :

Oil cooling has lower thermal capacity and a lower temperature limit (56°C) to prevent carbon or lacquer forming on hot surfaces, with consequent loss in heat transfer or choking of passages.



7TH 87

Machinery Part Cleaners

The machinery part cleaner designed for maritime use. It saves man hours because of simple operation and fast cleaning without supervision. The machines are able to accommodate and clean the most common auxiliary engine spare parts, filters, pump parts, tools, cylinder cover, etc.

Internal box is made of stainless steel plates and is well isolated in order to reduce the loss of heat and enable the machine to stay heated all day, ready of use. The energy loss at evaporation is reduced considerable as the machine is fitted with a steam reducer in the top, which opens for steam discharge when the machine is started.

The items are placed on the fixed grating which has a carrying capacity up to 1,350 kgs or for smaller items in a special designed basket, made of stainless steel.

The cleaning liquid is heated to the required temperature controlled by the fitted thermostat.

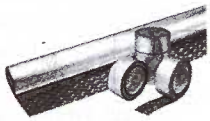
Anti-splashing Tape for Ship's Engine Room

For preventing outbreak of a fire caused by a splash of combustible oil, such as fuel oil, lubricating oil, etc. from oil pipes connected to an engine or a generator in a ship's engine room.

Amended SOLAS Reg.4.2.5.3, 4.2.3 and 4.2.4, Chapter II-2 stipulate that oil fuel line shall be screened or otherwise



suitably protected to avoid as far as practicable oil spray or oil leakage onto the source of ignition, hot surfaces, into machinery air intakes, or other sources of ignition.

Piping, valves, pressure gauges, or any other auxiliary parts become loose due to vibration, fatigue, deterioration of material, excess tension, and tend to be damaged with a pinhole or crack.

Covering with this anti-splashing tape to protect the exhaust pipe and other high temperature equipments from being exposed to splashes of combustible oil and preventing possible occurrence of a fire.

The tape consists of aramid woven cloth superimposed with aluminium foil on both sides, and an adhesive agent is applied to one side and covered by a separator film.

The tape can withstand prominent pressure of 1.5 MPa when applied properly.

Specifications

Tensile Strength	318 N per 10mm width
Ordinary Joint Strength	7 N per 10mm width
Shear Joint Strength	196N per 20mm x 20mm
Pressure Resistance	Maximum : 3.0 MPa Approved : 1.5 MPa
Heat Resistance	Maximum : 150°C
Oil Resistance	Inactive with respect to heavy oil, light oil, etc.
Weather Resistance	When tested with a weather meter, normal after 72 hours

M/E Scavenging Drain Analysis (SDA) Onboard Test Kits

"Fe-asy Checker 26"

A highly accurate analysis test kit on board for total iron content in the scavenging drain of diesel-powered main engines.

The colorimetric method enables crew members to take extremely accurate analysis of total iron content by specific wavelength filter for a photoelectric colorimeter and a special mix of two kinds of Reagents (A & B). The result is displayed in parts per million (PPM) value.

Optimizing scavenging drain oil requires careful monitoring of conditions inside the diesel main engine and recently, many instances of low-temperature sulfuric acid corrosion have been reported due to an increase of design pressure inside the cylinders. This analysis kit can measure not only conventional magnetic iron particles, but also the total iron content including iron ions, which lead to earlier detection of abnormalities inside the cylinder.

Engine Starter Motors

Reliable and powerful starter motors for diesel engines and generators. Their independent, dead-ship or black-start capability is ideal as your primary or secondary method of starting fire pumps, emergency generators and compressors.

Starters are available from stock from locations around the world. There are three types: Hydraulic, Air (pneumatic), and Spring (mechanical) type.

The starter motor must be specified to match the engine type and configuration so, when ordering, please specify the maker and model of engine and, if available, the original part number of the old starter motor.

Hydraulic Type

Air (Pneumatic) Type

Spring (Mechanical) Type

How to order CODE

Engine Starter Motor, Hydraulic or Air or Spring Type, Engine Capacity (litres), Engine maker, model and original part number of old starter etc.

Unit Per Set

Cast Iron Mud Boxes (DIN)
Basket Type, Flat Flanged according to DIN PN 10

Mud boxes are installed in suction pipes aboard vessels to protect pumps against large solids. The standard perforation size of the strainer basket is 8 mm square; the cover is mounted with brass bow nuts. The cover is provided with a blind boss, suitable for mounting an air vent. These mud boxes are also used for application on shore, for example in swimming pool installations.

Material Specification

Component	Material	EN and/or DIN
Body and Cover	Cast Iron	GJL-250 (GG-25)
Cover Seal Ring	NBR	
Basket Strainer	Stainless Steel	X5CrNi 18-10
Bow Nut	Brass	
Drain Plug	Brass	

*Body and cover are internally and externally epoxy coated.

Pressure and Temperature Range

Pressure class: PN4
Temperature range: -10°C ~ -50°C

Level Gauges for Oil (DIN)
Reflex Type with Push-Button, Spring to Close According to SOLAS Requirements

Especially for oil storage tanks and similar applications. The level gauges are also often used on board of ships.

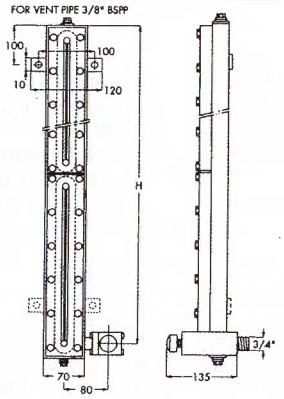
They meet the requirements of the international classification societies, such as the Lloyd's Register of Shipping, Bureau Veritas, American Bureau of Shipping, Germanischer Lloyd, Det Norske Veritas.

Available length is between 245mm and 6,000mm. Please specify required length when ordering.

Also following types are available if required.

* with the same connection on top including push-button or lever and weight.
* all of stainless steel.
* anti-clockwise to close.

Pressure/Temperature rating: 2 bar-95°C



Materials

Part	Material according to DIN	
Body	Steel	St.35
Cover Plate	Stainless Steel	X5CrNi18 10

How to order: 87 - 20 - 91

Level gauge for oil (DIN), reflex type, according to SOLAS requirements, with push-button, spring to close, LENGTH H in mm, TYPE of CLASSIFICATION SOCIETY

Air Vent Heads

Automatic closing system by disk float, and applicable to ballast tanks or oil tanks, etc. Main body is made of grey iron casting (FC-200). Connection flanges specifications are based on JIS 5 kgf/cm².

Application of IACS (International Association of Classification Societies) unified requirements P3(1991), and approved by NK, ABS, LRS, DNV and BV.

Please specify the flange size to be connected with type of pipe head when ordering.

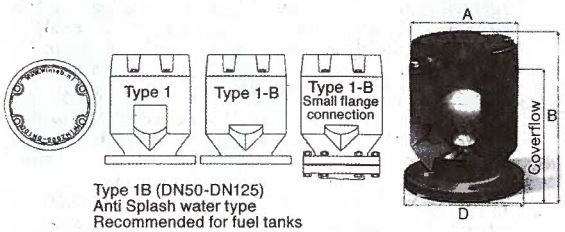
DIN PN10 type
Winteb Air Pipe Heads (Vent heads)



Type 1B (DN50-DN125)
Anti Splash water type
Recommended for fuel tanks

WIN2000 Type 1 Air Vent Head, including Screen (mesh 18) with DIN PN10 flange connection.

- Made of seawater resistant Aluminium DIN1725.
- Non corroding(If fitted according to fitting instructions).
- Maintenance free, smallest design available.
- Cost saving.
- High volume metric flow.
- Light weight = less fuel = less CO2 emission.

Available three types:
Type 1 - Standard
Type 1B - Smaller air inlet opening
Type 1B - Small flange connection

Approved by all major classification societies – ABS, BV, DNV, GL, Lloyd's, RINA, RMRS, CCS, and NK.

Please specify the type of air vent heads, flange size to be connected with the type of pipe head when ordering.

Model: WIN2000 Type 1 (with Screen)

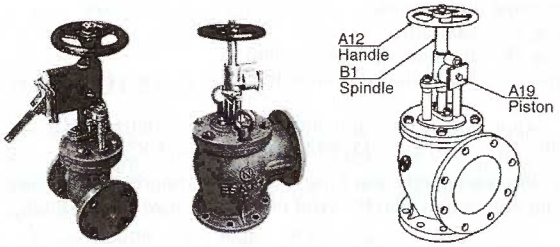
Emergency Shut-off Valves

For marine use on tanks containing oil fuel, lub. oil and other flammable oil which are required to have valves closed from safe positions outside the space concerned.

Made of cast iron and available two types of style : Globe type and Angle type, and also available two types of operation: Pneumatic Control type and Wire Rope Pull type as shown below, for flange specification, JIS type.



Shut-off Operation;

The Pneumatic Control Type:
Only open the compressed air supply valve connected from air reservoir. Air reservoir should be kept certain pressure between 0.39 MPa and 0.89 MPa.

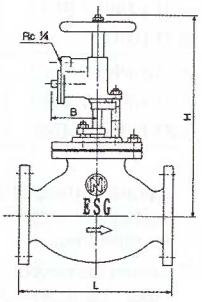
The Wire Rope Pull Type:
Only pull the lever connected with wire rope. For manual shut, these valves are able to close with handle wheel by rotating in clockwise direction.

Reset after Shut-off

1. Rotate clockwise until a head of piston is set in the grooving on spindle, and then rotate counterclockwise the handle to set valve in full open condition.
2. For small size valves (Max. 3") under the low level of liquid in tank (max. 5 mtr height), the valves can be reset with one touch by lifting the handle upward.

* Regarding Pneumatic Control Type, 1 or 2 should be applied after air supply valve is closed.

JIS Flanged End Globe Type



JIS 5K

Quick-Closing Valves (DIN)

Ductile Cast Iron for Marine Service

Pressure Rating PN 16/10

A quick closing valves for mechanical, hydraulic or pneumatic transmission. A reliable safety valve, providing for a remote shut-off from an accessible location. These valves comply with the requirements of the classification societies. Valves are mainly used on board ships and are suitable for fuel, oil etc.

Indoor Spinning Bikes

The indoor spinning bike is designed to make you feel as if you are cycling outdoors.

It can simulate different terrains for a good cardio workout, which involves interval training with climbs and sprints. The flywheel simulates momentum.

11 01 01	Bicycle stationary, indoor use	Set

Stationary Bicycles with Ergometer

A stationary bike with an ergometer to measure the results of the workout. Designed for High-performance and heavy use. It has several challenging programs for a full workout. The seat is vertically and horizontally adjustable and the wheels make it easy to transport.

Please specify the power source voltage when ordering.

11 01 02	Bicycle stationary, with ergometer	Set

Treadmills

The treadmill provides a powerful speed and allows variation in intensity of the exercise at any speed. The challenging programs will help you meet your goal. Available in "Foldable" and "Non-Foldable" type.

Foldable Treadmill

Non-Foldable Treadmill

Foldable Treadmill is "foldable" to save space in your exercise room, whereas Non-foldable treadmill has oversized frame which provides strength, rigidity and endurance during the exercise.

Cross Trainers

The cross trainer or elliptical trainer provides an efficient training. It combines the advantages of walking, running, cross training, stair climbing and push ups in one machine, at the same time.

Cross Trainer

Elliptical Trainer

Elliptical Trainer has "Frontweel" and "Backwheel", designed for an intensive and realistic workout, so please specify "Front/Back wheel", the power source voltage when ordering.

11 01 08	Cross Trainer	Set
09	Elliptical Trainer	"

Rowing Exercisers

The rowing machine incorporates many muscle groups at once, creating a great workout.

• Magnetic rower

The magnetic rower uses a maintenance-free magnetic break system to create resistance. The magnets are incorporated into the flywheel. They adjust resistance in calibration with your pull and are set.

• Air rower

The air rower has a flywheel that creates air resistance as you pull against it and can be calibrated to increase or decrease resistance.

The air resistance also goes against the force being applied, therefore, the faster you pull, the harder the resistance. The design simulates rowing in water, with a fluent and natural motion.

Please specify "Magnetic" or "Air" resistance rower, the power source voltage when ordering.

11 01 34	Rowing exerciser, indoor use, Magnetic rower	Set
10	Rowing exerciser, indoor use, Air rower	"

Multi Gyms

The multi station is a very compact and versatile machine that offers plenty of exercises to train the most important muscle groups: the chest, arms, back and legs. The smart and efficient design makes it easy to switch between exercises and lets you accomplish a divers training, without the use of many different machines.

11 01 11	Multi Gym Station, indoor use	Set

Smith Machine Sets

The Smith machine is a training machine used for weight training.

It consists of a barbell that is fixed within steel rails allowing vertical movement. The machine can be used for a wide range of exercises however it is most commonly used to perform "Smith machine squats"

11 01 46	Smith Machine Set	Set

Chin & Dipping Multi Stands

Designed to build and tone your triceps, chest, shoulders and core to develop six pack abs. Thick comfortable back pad, arm supports and rubber hand grips reduce fatigue and discomfort allowing you keep working on your upper body and abs.

11 01 47	Chin & Dipping Multi Stand	Set

Weight Sets, etc.

There are many kinds of body building equipment available such as barbells, dumbbells, bench presses, and barbell stands.

Puzzle Exercise Protection Mats

The puzzle exercise mat creates a comfortable surface for workouts and exercise equipment while protecting your floors.

Dense EVA foam absorbs impact and noise during workouts and provides a soft surface for exercises like Yoga and push-ups.

Lightweight puzzle pieces connect quickly and easily, and can be disassembled just as simply for quick storage.

<Approximate Size>
60 × 60 × 1.2cm

11 01 48	Puzzle Exercise Protection Mat	Pc.

Exercise Mats

Training mat is for use in stretching, Yoga, and variety of core trainings.

11 01 14	Exercise mat	Pc.

Weight Lifting Belts

Weight lifting belt provides superior back and abdominal support during weight training.

< Approximate Size >
S : 61-81 cm
M : 74-94 cm
L : 86-106 cm

Please specify the size when ordering.

11 01 15	Weight Lifting Belt, Size ----	Pc.

Exercise Balls

Made of soft elastic filled with air, and suitable for balancing training, core body training – abdominal muscles and buck muscles, and more.

Standard Sizes available in OD:
55 cm/65 cm/75 cm/90 cm

Please specify the ball size when ordering.

11 01 16	Exercise Ball	Pc.

Medicine Balls

A medicine ball (also known as an exercise ball) is soft rubber weighted ball used for strength training

It enhances your daily exercises, and usually available for 1 – 10 kgs.

Pease specify the ball weight when ordering.

11 01 49	Medicine Ball, _____ Kgs	Pc.

Push-Up Bars

Supporting your push-up exercises, increase chest, shoulder, and triceps strength with push-up bars.

High impact plastic with non-slip end caps for increased stability, and foam handgrips for improved comfort.

11 01 17	Push-Up Bar	Prs

Exercise Wheels

Small sturdy wheel with a rod traversing the center that serves as the handles.

Assist with core-strengthening exercises, such as highest-rated abdominal exercise. Careful technique is required to avoid muscle strain or injury.

11 01 18	Exercise Wheel	Pc.

Hand Grips

Basic and quality pair of handgrips, great as a starter set to train hand grip balance. Durable chrome steel springs are for a long useful life.

Grip strength is available from 15 kgs to approx. 70 kgs. Please specify the level of strength (kgs) when ordering.

11 01 19	Hand Grip, Strength __kgs	Pc.

Foam Rollers

Designed for stretching your body, increases blood flow for an accelerated muscle recovery before and after working out. It's also perfect for developing core stabilization, lower body balance, and stamina.

Water resist and light weighted. Please specify the size when ordering.

<Approximate Size>
Short : Dia 13.5 cm x Length 32 cm
Long : Dia 15 cm x Length 98 cm

11 01 70	Foam Roller	Pc.

Skipping Rope

Durable solid rubber rope with molded handles for Jump Rope workout.

Please specify the length of rope when ordering.

11 01 27	Skipping Rope	Pc.

Ankle/Wrist Weights

Ankle weights enable you to tone your glutes and thighs, wrist weights will tone your shoulder and arms.

Easy hook-and-loop closure for use.

Please specify the weight when ordering.

Marine TV Antennas

Marine TV antenna systems are omnidirectional, receiving signals in a full 360 degree radius, and require no additional adjustment when properly installed.

Receiving wideband TV–AM–FM signals (Frequency Range 40 – 890 MHz), antenna brings in beautiful colour pictures on both VHF and UHF television and provides for FM stereo reception at sea.

All internal electronic components are environmentally protected with a corrosion resistant coating. Exterior is made of white ABS plastic, which requires no maintenance.

Supplied with a mount for installation. Please specify if you require a straight mount, for parallel mounting on deck or the roof of the wheel house, or a bracket or mast mount, for mounting on a mast or a wall.

Also specify how many television units will be used with the antenna so the dealer can determine if a signal amplifier or booster is necessary.

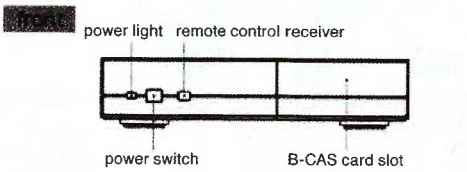
Specification

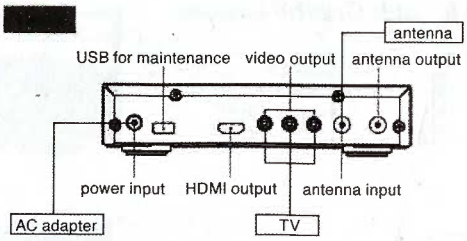
Frequency Range	40 - 890 MHz.
Average Gain	20 dB
Supply Voltage	AC 110 / 220 Volt

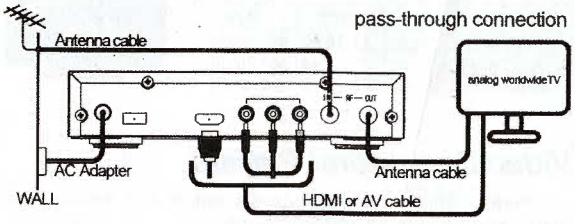
11 12 05	Marine TV antenna supply voltage AC 110/220V with assembly	Set

Smart Digital Tuners™ Worldwide

A worldwide digital terrestrial TV (DTT) receiver for ocean going ships. Designed to tune-in to all approved DTT Broadcast Standards, such as, ATSC, DVB-T/T2, ISDB-T, ISDB-Tb, and DTMB. This enables viewing of terrestrial digital broadcasts, on ships in port or navigating along a coastline, simply by connecting it for ships to an existing TV and antenna.







Connection diagram

7TH 11

Digital Terrestrial TV Broadcasting Standards by region

DVB-T/T2	Europe, Australia, Taiwan, Singapore, UAE etc.
ATSC	USA, Korea etc.
ISDB-T	Japan
ISDB-Tb	South America etc.
DTMB	China, Hong Kong etc.

* In order to receive terrestrial digital broadcasts, it is necessary to have the corresponding TV antenna.
* Only available in countries with DTT broadcast service, and even in countries where DTT broadcasting has been started, it may be impossible to view digital TV if the current location (anchor point) is distant from the broadcasting station, or if it is impossible to obtain signal strength sufficient for TV viewing at unfavorable locations such as those where noise has an effect on TV signals, so provision of service is subject to the signal conditions.

Specifications

Model	KST-1000-W
Supported DTT Standards	ATSC, DVB-T/T2, ISDB-T, ISDB-Tb, DTMB
Ports	DC Jack, HDMI output, RCA video output, Antenna input/output(RF pass-through output), USB 2.0(for maintenance)
Content formats	Video: H.264, MPEG1, MPEG2, MPEG4 Audio: MPEG audio
Output Resolution	Selectable DTV Output Resolution (720p/1,080i/1,080p) *when using HDMI Cable
Accessories	AC Adapter, AV Cable(RCA), Remote control, Foot plates, B-CAS card(for Japan)
AC adaptor	100-240V, 50/60Hz
Operating temperature	0-40°C
Operating humidity	20-80% No condensation
Dimension	190 x 42 x 115mm
Weight	510 g

IMPA online Education

Dedicated Marine Purchasing and Supply education programme

Education remains a key priority for IMPA and the association has **introduced the most comprehensive education programme in its history.** The intention is that IMPA's online course will provide procurement and supply chain management professionals with the credibility and status that other professional disciplines enjoy.

Each course has been designed to be taken over a 12 month period and entirely on-line. IMPA members receive a discount on course fees.

Created by the industry for the industry

The first of its kind and available to all - 100% online!

Enrol today

Secretariat on: +44 (0) 1206 798900 | training@impa.net

65	18.3	180	82.2	900	482.2	2050	1121.	3200	1760.

To convert Fahrenheit into Centigrade:

$$F = 32 + \frac{9}{5}C$$

Subtract 32 from Fahrenheit and divide remainder by 9 and multiply by 5.

Example: 212 Fahr.

$$\frac{32}{180} \qquad 180 \div 9 = 20. \quad 20 \times 5 = 100.$$

Ans. 212Fahr. = 100Cent.

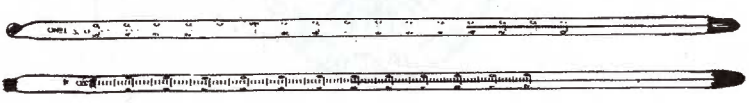
Centigrade to Fahrenheit:

$$C = \frac{5}{9}(F - 32)$$

Divide by 5, multiply by 9 and add 32.

Example: 260Cent. ÷ 5 = 52. $52 \times 9 = 468 + 32 = 500$Fahr.

Ans. 260Cent. = 500Fahr.



Comparison Table
for
Prevailing Unit and S.I. Unit

Quantity	Prevailing Unit	S.I. Unit	Remark

Reference Table
for
Mass, Weight and Pressure

Unit Indication

Unit / Section	Metric Unit (Gravity System)	Metric Unit (MKS System)	S. I. Unit
Mass	Kg (Kg/g. m/s²)	Kg	Kg
Weight (Force)	Kgf (Kilogram Force)	N (Newton)	N (Newton)
Pressure (Stress)	Kgf/cm² (Kilogram Force Per sq.Centimeter)	N/m² (Newton Per Square Meter)	Pa (Pascal) or Bar

Pressure Conversion Table

1MN/m²	1MPa	1 Mega Newton Per Sq. Mtr equal to 1 Mega Pascal
1Kgf/cm²	0.0980665Mpa≒0.1MPa	1 Kgf Per Sq. Centimeter approx 1/10 of Mega Pascal
1MPa	10.197162Kgf/cm²≒10Kgf/cm²	1 Mega Pascal approx 10 times of 1 Kgf Per Sq. Centimeter
1Bar	1.0197Kgf/cm²≒1Kgf/cm²	1 Bar approx equal to 1 Kgf Per Sq. Centimeter

Remark:The standard weight of the object is multiplication of "Mass of the Object (m)"by "Standard Acceleration of Gravity(9.80665m/s²=gn)", that is symbolized mgn.

In case m is 1 kgs.
Standard weight is

$$1Kgf = 1Kg \times g \cdot m/s^2 = 1Kg \times 9.80665(m/s^2)$$
$$= 9.80665N$$
